In the Name of God

Islamic Republic of Iran

Ministry of Health and Medical Education

Deputy Ministry for Education

General Medicine

Degree: Doctor of Medicine (MD)

Approved at the sixty-seventh meeting of the Supreme Council for Medical Planning, dated ۲۳/July/۲۰۱۷

Shahrekord University of Medical Sciences, Management of International Education Development

Revised for Shahrekord University of Medical Sciences

International English Language Students

Dated ۲۰۲۲

Program Description

Introduction

Thirty years after developing the curriculum the of the General Medicine in an attempt to implement the ١٢th paragraph of the third article as well as articles ٢٩ and ٣١ and the first paragraph of the third article of the constitution of the Islamic Republic of Iran, in ١٩٨٥, medical schools of country have embraced dramatic quantitative and qualitative changes ever since. Among the changes that have been made to the structure of medical schools, having been taken into consideration in current version, adding to the number of the medical schools, the dramatic increase in the number and variety of specialties and subspecialties, acquiring new knowledge and experience in education, and advances in information technology as well as ease of access to the up-to-date knowledge, along with major advances in approaches to knowledge and skills in the third millennium, may be referred to. On the other hand, changes in the health care system, as the development of the family physician programs within the health system, aging population and burden of diseases, greater access to the specialists in small cities, increasing use of diagnostic and therapeutic technologies in the routine care and, hence, high cost of the medical care, more and more active international engagements in the health care, as well as the development of evidence-based practice and new therapeutic concepts in medicine, a standard curriculum for developing expected competencies of the General Practitioners seems inevitable.

This curriculum has been developed considering changes in requirements of the health system, prevailing condition of medical schools, developments in medical knowledge throughout the world, experiences gathered during the past thirty years in education and due interventions for its quality improvement. So, this revised edition, while avoiding fundamental changes which might be opposed by most schools, has been prepared in such a way that any competent school could implement suggested new and more effective educational strategies while maintaining its original goals and (core) curriculum as well as ensuring its implementation by all medical schools of the country.

This being a curriculum at the national level, each school should formulate its specific academic curriculum based on it and the terms of reference of the Education Deputy of the Ministry of Health and Medical Education. An important feature of this curriculum as a national is its emphasis on the expected Competencies of a general practitioner, flexibility in implementing, narrowing the courses to only the compulsory ones, relegating others to elective courses as decided by the schools and implementing strategies for particular circumstances as well. Credit courses on such important concepts and skills as professionalism, evidence-based medicine (EBM), traditional and complementary medicine, family medicine as well as practical tests and skill assessment are considered to be prerequisites for graduation. This is a new feature in this curriculum as compared with the previous one. It is expected that proper implementation of the curriculum in defined, especially outpatient and community clinical settings (in accordance with the standards set forth in chapter ٤ of this document) will lead to greater improvement in social accountable medical education.

Program Definition and Description:

Major: Medicine

Degree: Doctor of Medicine (MD)

Program Definition:

Medicine is a branch of applied sciences, aiming at protecting and promoting health, and diagnosing, treating and preventing diseases. Rabi 'ibn Ahmad Akhaveini, in Hedayat Al Motealemin (Guidance of the Scholars), the oldest Persian text on medicine (٤th century AH), defined medicine as: "Bejeshki (medicine) is a craft that, scientifically and practically, keeps people healthy or brings back it to them". General Medicine (MD) is the basis of all specialized medical disciplines, so knowledge learned and skills developed during this period are essential not only for good practicing as GP, but also success in future higher education in various specialties and subspecialties fields.

General medical graduates learn knowledge, art, and skills of diagnosing, treating and preventing illnesses through acquisition of the essential knowledge in basic medical and various branches of clinical sciences and lots of practice, using them for their patients and other clients. In addition to acquiring knowledge and skills, social and professional development through guided, purposeful and thoughtfully participation in the professional interactions during the periods of study, apprenticeship, and internship is necessary as well for being a qualified doctor. To find In order to achieve these goals, it is necessary to carefully implement the program standards contained in chapter ٤ of this document.

Admission Requirements

The national placement exam should successfully be passed in accordance with the rules and regulations of the Ministry of Health and Medical Education.

History of the major and evolution in the world and Iran:

History of medicine in the world: Academic medicine has paced with human civilization, and the scientific authority has been possessed by civilizations in proportion to their effective communication and greater global influence. The Flexner Report, at the beginning of the twentieth century, may well be the first milestone of the modern formal medical education. The impact of this report and the dynamism of medical education throughout the twentieth and present centuries has had clear implications for medical schools, including the explanation of various strategies and methods of education and assessment, systematic educational processes, and medical education having been developed as a subcategory of the science of education, which tries to document evidences concerning teaching processes and organizations. In addition to such advances in the academic medical education, dramatic changes in the content and context of medicine both as science and service provider, at times accompanied by paradigmatic changes, have strongly influenced teaching the General Medicine, especially in the third millennium.

History of medicine in Iran: In Iran, however, it dates back to before the advent of Islam. The great and well-known school and hospital, Jundishapur, during the sixth century AD, was both a university for both medicine and philosophy, and a hospital and dormitory as well. It, being the most important educational and research center in that time, had many scientists and physicians who were teaching, studying and practicing medicine. In addition to writing books, Iranian scholars translated many Greek and Hindi books into Pahlavi and taught them. By studying this university, it is possible to recognize the history of formal education of medicine in Iran. Also, the invention of hospital treatment method should be considered by Iranians to a large extent. Islamic period hospitals were often built on the basis of the samples and principles of the Jundishapur Hospital. Azodoldoleh's famous hospitals in Shiraz and Baghdad, and later in Damascus followed the example of the Jundishapur as prototype. The first Islamic pharmaceutical product has also been from this largest medical center of the contemporary world. Jundishapur was the most important medical center of the world during the Arab conquests. It has been one of the most famous universities throughout the world for centuries.

Later with the flourishing of the Islamic civilization and its prosperity, Iranian physicians were still forerunners of academic medicine as well as publishing the reference books. The teaching place of Avicenna, as the oldest medical academy, where a valid textbook -The Law on Medicine- a valuable source of medical education for centuries, was published, is still there.

The education of modern medicine has not been especially organized in Iran until the foundation of the Dar al-Fonoun school, while The Law on Medicine of Avicenna and Explaining Causes by Nafisi were regarded as the authentic and classical books. There was no definite place for studying medicine, and the learners, having been graduated preliminaries (grammar and divine wisdom) and studied natural wisdom (medicine, etc.) at the offices of the contemporary famous physicians, could practice freely as doctors after learning the basics and getting brief information on medicine. This has been the case till Nasir al-Din Shah and Amir Kabir, the Chancellor, came to power, when Dr. Kolokeh of the court set out to train some people by the order of Naser-al-Din Shah. In ١٨٥٠, Amir Kabir decided to build the campus Dar-al- Fonoun in a corner of the court which had been partly prepared by ١٨٥١. In ١٨٧٣, Nasser-al-Din Shah ordered the establishment of a hospital and the first hospital (Sina) was opened in ١٨٨١ with the deceased Nazem al-Atebba as its principal. Consequently, other schools were derived from the Darul-Fonoun school.

In ١٨٨٠, the School of medicine was separated from the Dar al-Fonoun with the late Loghman al-Dawla Adham as its dean. From then on, especially after ١٨٩٠, medical education, divided into basic and clinical courses, became more disciplined at the School of Medicine. In ١٨٩٥, the law of establishing the University of Tehran with various faculties including the Faculty of Medicine was approved by the Parliament. Today, nearly ١٠٠ years after the establishment of the first medical school, ٦٣ medical schools are working throughout the country.

Philosophy (Values and Beliefs):

A general practitioner works at the first line in providing community with the health services. Constantly being subject to the judgment and assessment of the community, she or he should have desirable professional qualities and professional skills while conforming to established norms. Human are multi-dimensional with diverse physical-spiritual and cultural concerns and needs. This makes the human resources training programs aimed at improving community health cherish multi-layered and diverse values. A medical practitioner physician may not only deal with the body and its illnesses, but is the sole person who, as a professional, have most intimate encounter, occasionally even more than any close friend or relative, with those requesting health services. So, training doctors committed to ethics and professionalism should be the most important and a key element in related programs. Medical sciences are constantly changing, so physicians should be committed to lifelong learning and continuous professional development to ensure the accuracy of clinical decision making on providing appropriate services according to solid evidence. Thus, developing critical thinking and self-directed learning skills are mandatory in general medical program and should be considered especially in the implementation strategies.

According to the principles of education, proper instructional design and content organization of learning are absolutely essential. More direct interaction between the professors and students, early and purposeful contacts of the students with the clinical environment, as well as taking advantage of the plenty of opportunities to practice and develop skills and assign more responsibility to the students in accordance with the educational phases (during basic science courses, pre-clinical, clerkship and internship periods), coupled with methods of ensuring safety and acknowledging the patients' rights should be emphasized.

The Vision:

The curriculum, while being implementable by less advantaged faculties, should meet the internationally accepted standards using the latest findings in medical education. Finally, it should bring up capable, ethically committed and socially accountable alumni dedicated to meet needs of the health system of the country.

The Mission:

The mission is to explain the goals, learning opportunities, and rules to fulfill the expected abilities of the graduates. The curriculum, while addressing the concerns of all stakeholders, defines educational goals with a pragmatic and flexible approach so that all faculties can train general practitioners in as much accordance as possible to the national standards, taking into account their resources and educational features.

We believe that graduates should have sufficient knowledge and skills to serve as the gatekeeper of the health care system. They should be able to fulfill their professional role either through providing best (up- to-date) services to the patients directly or by coordinating their services with other providers, considering needs and resources, thus helping fulfill the Integrated Delivery System. The care provided by the graduates, regardless of the age, gender, race or cultural or social levels of clients, while considering their cultural, social, economic and psychological background, should be as consistent, comprehensive and extensive as possible, in order to promote the health of the community. They should also identify community problems that go beyond those of the people who seek health services. By understanding health-related behavior of the community, they will fulfill more effective role in supporting people's efforts to protect its health.

We believe graduates of this discipline should be responsible, compassionate, altruist and self- empowered, who work hard with commitment in promoting the health of the community. The medical schools, as executors of this curriculum, are committed to observe the values and principles of the Islamic Republic of Iran and create the conditions for the students for living up to the standards of human excellence based on the inexhaustible Islamic culture considering human dignity, the ultimate goal being to train physicians committed to the Islam and adhering to the scientific standards.

Providing the basis for evaluating the implementation and implementation of the program along with determining the extent to which all educational objectives are achieved and providing an appropriate mechanism for assessing graduates' ability is one of the most important missions of the program.

Program Goals:

The ultimate goal of the general medical education program is that by acquiring the expected competencies, graduates of this course will be able to take care of the patients' health and care according to the standards of service while complying with professional ethics standards, the ability to manage information andlife-long learning, and serve as the front line of health services delivery.

Professional obligations of graduates in the community:

- The professional obligations of graduates in general medicine are:
- Taking technical responsibility of the private offices and authorized health services centers
- Providing health services in accordance with the standards approved by the Ministry of Health and Medical Education
- Providing health education counseling services to individuals, communities and target groups (with specific rules for each target group)
- Participating in all educational and research activities approved by the relevant authorities (Ministry of Health and Medical Education or other organizations authorized to employ general practitioners)
- Providing expert health care services to fulfill the needs of related organization within the scope of her/his professional competence of general practitioners ·

Getting involved in health management

Expected basic Competencies and Skills:

Main capabilities expected from the graduates are:

١. Clinical skills
٢. Communication skills
٣. Patient care (diagnosis, treatment, rehabilitation)
٤. Promoting health and preventive strategy and physicians' contribution to it
٥. Personal development and continuous learning
٦. Showing professional commitment, observing medical ethics and respecting laws during practices
٧. Decision-making, argumentation and problem-solving skills

A full description of the capabilities and a list of practical skills expected from the graduates of this field are detailed in the document on the expected Competencies of graduates of the General Medical Schools in the Islamic Republic of Iran approved by the sixty-second session of the Supreme Council for the Planning of Medical Sciences (۲۰۱٦/۱/۱۰).

Educational Strategies

This program was designed using the systematic planning strategy with regard to the competency- oriented so that it is possible to execute its different parts using one or more items of the following educational strategies in the universities:

- Student- and Professor-Oriented Education
- Community Oriented Education
- Subject Based Education
- Outpatient Based Education
- Hospital Based Education
- Problem Based Education
- Task Based Education

Educational Methods and Techniques

This program will enjoy the different educational methods and techniques according to the learning goals of each course, the faculty facilities and conditions.

This program focuses on the proportion of methods and techniques with learning goals and fields, and therefore, any special method of technique wasn't discussed in the whole of national program. Accordingly, it is advised to, in using educational method or techniques, consider the existence of educational outcomes of each method or technique, its educational outcomes and also preparation of students and professors for suitable execution, also economic and executive issues of application of such methods. The necessary advices are presented in some cases on special method for some courses in syllabus. Also, in program standards, educational methods are explained for presentation of further program.

Examples of Types of Methods and Techniques Used

- nter-university conferences, and A variety of **i**nterdisciplinary, hospital and international conferences
- Discussion in small groups, training workshops, journal club and book reading, case presentation
- Working and educational rounds
- Personal and group practice in clinical skills learning center (Skill Lab.)

Blended Learning, using simulation techniques according to the facilities

Working in laboratory according to the facilities

- Self- study
- Other educational methods and techniques based on the educational needs and goals

Ethical Expectations of Learners

The students of MD are expected to:

- Observe the care taking of patient, legal charter of patient.

- Observe the regulations of patient safety and security (compiled by the related educational department and presented to the learners).
- Observe moral codes of mother, embryo and infants carefully (presented to the learners by educational department).
- Observe the regulations of drug safety and security including chemical and non-chemical compounds carefully (compiled by the related educational department and presented to the learners).
- Observe the professional dress code.
- Observe the regulations of working with laboratory animals.
- Be committed to their professional affidavit.
- Protect the resources and equipment working with them under any condition.
- Honor other professors, personnel, fellows and learners, and cooperate in providing an honorable honest atmosphere in workplace.
- Observe considerations of social and professional ethics in criticism of programs.
- Observe the research ethics items in performing the related researches.

Student Assessment

A) Methods of the assessment

Deciding on the assessment method, based on the learning objectives and existing conditions, will be the responsibility of the faculty curriculum committee. It should be selected and implemented in such a way that, while ensuring the validity and reliability of the methodology and tools used, ultimately encourage students to deep and continuous learning. Evaluation methods may be:

Theoretical Courses: Written tests, completing such assignments as written reports, lectures, oral tests, computer interactive tests.

Practical and Clinical Courses: Closely observing student's clinical performance, structured objective tests such as OSCE, OSLE, OSFE, DOPS, ٣٦٠-degree evaluations, portfolio assessment including Log book evaluation, and so on.

As for the objective of professional behavior, it will be best assessed by observing students throughout their course of study.

b) Types of the assessment

١. Arranging schedule for the continual assessments of students will be the responsibility of the Curriculum Committee of the Medical School.

٢. Comprehensive tests during the course will be:

- A Comprehensive Test of the Basic Sciences at the end of the basic course
- A Comprehensive Pre-Internship Test at the end of the clinical course
- A Practical Final Test of the Clinical Competencies six months after the beginning of the internship

Passing each of the above tests will be a requisite for going to the next stage, while passing the Practical Final Test of the Clinical Competencies will be required for graduation.

Specifications of Program and Courses of Educational Program of MD

Main specifications of program:

Name of Program: Doctor of Medicine (MD)

Program approved by Higher Council of Medical Sciences Planning, Ministry of Health.

Total Educational Credits: ٢٨٣ credits presented as follows:

- General Courses	١٤ Credits
- Basic Core Courses	٦٩,٥ Credits
- Specialized Core Courses	١٧٧,٥ Credits
- Non-Core Courses	١٦ Credits
- Thesis	٦ Credits

- Total ٢٨٣ Credits

Steps

This program includes ٤ steps: Basic Sciences, Clinical Preliminaries, Clerkship and internship.

Core Courses:

The core courses include the core curriculum learning of which is necessary for all students of General Doctor of Medicine for meeting expected capabilities of general practitioners. Faculty of Medicine shall provide the conditions for ensuring the presentation of such courses and fulfillment of goals mentioned therein.

Core courses of program are presented as follows:

1. **The ١st Step (Basic Sciences):**

   General Courses: at least ٨ credits out of ١٤ core credits before comprehensive examination of basic sciences

   Basic Courses: at least ٤٦,٥ credits out of ٦٩,٥ core basic credits before comprehensive examination of basic sciences

   Entering Clinical Preliminaries is subject to passing comprehensive examination of basic sciences.

2. **The ٢nd Step (Clinical Preliminaries):**

   Number of Specialized Credits of Clinical Preliminaries: ٢٩ credits

   Number of Floating Credits between Basic Sciences and Clinical Preliminaries steps: ١٥ credits of Basic Courses

3. **The ٣rd Step (Clerkship):**

   Minimum duration of clerkship is ٢١ months which may be divided into, according to the faculty program, ٢ sections of Clerkship I (or student) and Clerkship II (or externship):

   Total Theoretical Credits of Clerkship (Core): ٣١ credits

   Total Clinical Clerkship Credits (Core): ٦٣ credits (equal to ٢١ months)

   Total Floating Theoretical Credits between Clinical Preliminaries and Clerkship (Core): ٧ credits of specialized courses

   At the end of ٣rd step, students shall pass the comprehensive examination of preinternship.

   For participation in general pre-internship examination, students shall pass all general courses and all basic and specialized courses related to clinical preliminaries and clerkship.

4. **The ٤th Step (Internship):**

Duration of Internship: ١٨ months

Number of Core Credits: ٥٦ credits

One month from the internship step is assigned to the interns on vacation.

A student's graduation from a general medical doctorate is subject to success in the practical test of clinical competence.

Elective (non-core) Courses

Elective courses include the non-core subjects of program providing this possibility for universities and students to present the content and opportunities of various learning as complement for helping meet the capabilities expected from the MD according to the academic conditions, special needs of region and also interests of educational departments and students. Total specialized elective credits during this program are ١٦ credits:

Number of specialized selected credits that the student must have passed before the pre-internship test: ٤ credits

Number of specialized selected credits (internship) that must be completed during the internship phase according to the university program and selection by intern: ١٢ credits

Table A: General Courses of MD

٢٢٢	Neurologic Diseases	٢٥ (١,٥)	٢٥	٢٥ (١,٥)			Clerkship	Specialized
٢٢٣	Dermatology Clerkship	٣ Credits		٣ Credits	١ months (٤ wk)		Clerkship	Specialized
٢٢٥	Ophthalmology Clerkship	١,٥ Credits		١,٥ Credits	٢ weeks		Clerkship	Specialized
٢٢٧	Ear- Nose- Throat (ENT) Clerkship	٣ Credits		٣ Credits	١ months (٤ wk)		Clerkship	Specialized
٢٢٩	Medical Ethics	٣٤ (٢)	٣٤	٣٤ (٢)			Clerkship	Specialized
٢٣٠	Forensic Medicine and Intoxications	٣٤ (٢)	٣٤	٣٤ (٢)			Clerkship	Specialized
	Thesis	٦ Credits		٦ Credits				

Note١: Specialized Courses are the clinical core courses and they do not end up to any specific specialty degree. Note٢: The code numbers ٢٠٠, ٢٠٣, ٢١٨, ٢٢١, ٢٢٤, ٢٢٦, and ٢٢٨ are mentioned in the Table ٤.

Table ٣: Some Non-Core

No.	The Course Category	Course Name	Hours (Credit)				
			Total	Theo.	Prac./Workshop	Clerkship	Type of the Course
١	Anatomy	Surgery Anatomy	(١)١٧	١٧			Specialized
٢	Physiology	Sport Physiology	(١)١٧	١٧			Specialized
٣	Biochemistry	Clinical Biochemistry	(١)١٧	١٧			Specialized
٤	Community Medicine	Health Management in Accidents	(٢)٣٤	٣٤			Specialized
٥	Genetics	Clinical Genetics	(١)٣٢	٧	١٠	١٥	Specialized
٦	Nutrition	Nutrition in Diseases	(٢)٤٠	٢٨	١٢		Specialized
٧	Immunology	Applied Immunology	(٢)٣٤	٣٤			Specialized

٨	Pharmacology	Pharmacotherapy of Common Diseases (Therapeutics)	(٢)٣ ٤	٣٤			Specialized
٩	Pharmacology	Prescription and Drugs Reasonable Prescription	(١)٣ ٤		٣٤		Specialized
١٠	Clinical Departments	Principles of Medicine Rehabilitation	(١,٥)	١٤	١٠	٢٠	Specialized
١١	Clinical Departments	Patient Immunity	(٢)٣ ٤				Specialized

Note١: Specialty Courses are the clinical non-core courses and they do not end up to any specific specialty degree.

*The maximum number of selected course credits for each student during the course will be ٤.

**Various departments can develop selected courses for students during basic, clinical and practicing phases according to their need or school clinical or internship based on the university's requirements and the needs of students in designing and delivering elective courses in basic sciences. The composition and the hours of theoretical, practical, and apprenticeship training, depending on the subject, objectives and content of the course, are the responsibility of the medical school curriculum committee.

Selected courses offered in Table ٣ are examples of elective courses and universities can add other lessons to the list according to the needs and discretion of the school curriculum committee, and with the approval of the Secretariat of the General Medical Education Council.

Table ٤. Some elective (Non-Core) Internship Rotations

Code	Name	Number of Credits	Duration
٢٠٠	Orthopedics	٢-٤ Credits	٢ to ٤ weeks
٢٠٣	Urology	٢-٤ Credits	٢ to ٤ weeks
٢١٨	Infectious Diseases	٢-٤ Credits	٢ to ٤ weeks
٢٢١	Neurologic Diseases	٢-٤ Credits	٢ to ٤ weeks
٢٢٤	Skin Diseases	٢-٤ Credits	٢ to ٤ weeks
٢٢٦	Eye Diseases	٢-٤ Credits	٢ to ٤ weeks
٢٢٨	Ear, Throat and Nose Diseases	٢-٤ Credits	٢ to ٤ weeks
٢٣٢	Family Medicine	One credit per week of internship	٢ to ١٢ weeks
٢٣٣	Neurosurgery	One credit per week of internship	٢ to ٤ weeks

٢٣٤	Traditional Medicine	One credit per week of internship	٢ weeks
٢٣٥	Anesthetics	One credit per week of internship	٢ weeks
٢٣٦	Toxicology	One credit per week of internship	٢ weeks
٢٣٧	Psychosomatic Diseases	One credit per week of internship	٢ to ٤ weeks
٢٣٨	Forensic Medicine	One credit per week of internship	٢ weeks
٢٣٩	Physical Medicine and Rehabilitation	One credit per week of internship	٢ to ٤ weeks

* The courses mentioned in Table I are just a few of the elective rotational internship periods. Presenting theoretical courses as well as elective rotational internship periods will be the responsibility of the universities which may develop other courses, in addition to the aforementioned ones, according to the criteria while considering local and regional conditions and available facilities. Courses will be presented after being approved by the Secretariat of the General Medical Education Council and taking into account the maximum number of Credits each student can take. This will be ١٢ The ceiling of the number of Credits of the chosen course for each student in the internship is ١٢ Credits during internship.

**The maximum number of Credits each student can take during elective rotational intern ship will be ١٢.

Note on the course syllabi:

١. The syllabus of the nation al curriculum course is a list the overall goals, course topic and their subject matter core contents within the frame of which each medical school specific educational program should be developed under the supervision of the undergraduate medical curriculum committee of the medical school. ll١ere, in addition the specific learning objectives, strategies and methods of learning and teaching, student assessment, course resources, and other provisions related to the presentation of each course will also be designed and announced.

٢. Instituting and updating learning resources for courses contained in the Comprehensive Basic Science Examinations, Pre-internship, and Practical Examination of Clinical Competencies are the responsibility of the Joint Committee for the Designation of Resources for tests in General Medi cine. The Secretariat of the General Medical Education Council is required to announce as appropriate (on the website, through correspondence with the universities, etc.), updated references for the next year's examinations, at the beginning of each academic year.

٣. School departments providing courses may establish other resources, in addition to those references prescribed before, at the discretion and approval of the general medical curriculum committee of the school.

MD Curriculum Content

Introduction to Anatomy

Code: ١٠١

Presentation: Basic Sciences of Medicine

Prerequisite: -

Type of Course: Theoretical (٣٨ hours), Practical (٨ hours), Total (٤٦ hours)

Total Goals:

1- Recognizing the principles and nomenclature of anatomy and use them in imagining and describing the organs in different situations and movements of body;
2- Recognizing the general main body structures including the skeletomuscular, vascular and nervous systems, and determining the situation of important organs and body systems related to them;
3- Recognizing type of cells and general body tissues including the covering, muscular and connective tissues (with their derivatives), and getting familiar with the formation and evolution of embryo, placenta and the embryological origin of body organs; Viewpoint:
1- Observing and honoring the human dignity;
2- Giving the members of cadaver the educational and biological importance;
3- Offering their findings and questions through study on moulage before working on cadaver;
4- Actively cooperating in group works on cadaver concurrent to learning- training processes;

Description: training the principles and method of nomenclature of anatomy, general body structures including the musculoskeletal and nervous systems, situation and relation of organs, types of cell and general body tissues including covering, muscular and connective tissues (with its derivatives) and formation and evolution of embryo and placenta;

Necessary Content:

1- Introduction (history and introducing the masters), definitions and principles of working with cadaver, expressing the moral principles governing the medicine and cadaver;
2- Anatomical status of body, plates and centers, terminology and body movements;
3- Generalities of general body systems including skeleton, joints, muscular and nervous; 4- Normal anatomy of body and variations;
5- Principles of radiological and clinical anatomy;
6- Introduction to histology and tissue studying methods; 7- Cell and cytology;
8- Covering tissue;
9- Connective tissue and fat;
10- Blood and hematopoietic;
11- Bone, cartilage and joints;
12-Muscular tissue;

13- Nervous tissue;

14- Introduction to and definitions and gametogenesis including oogenesis and spermatogenesis;

15- Ovulation, zygosis and formation of zygote (the ۱st week);

16- Implantation and forming the embryonic curtains and blood relation of mother and embryo (the ۲nd week);

17- Forming ۳-layer embryonic disc, gastrulation and forming body organs (the ۳rd week);

18- Derivatives of ectoderm, mesoderm, and nervous stenosis layers (۳rd to ۸th weeks); 19-

Fetal period (۸th to ۳۸th weeks), placenta and embryonic curtains and twins;

20- Principles of teratology and congenital disorders; ۲۱- Growth after birth;

Necessary Notes: the viewpoint aspects shall be mainly focused on in all anatomy courses. If skin anatomy is not trained in this course, it shall be trained in endocrinology anatomy.

Musculoskeletal Anatomy

Code: ۱۰۲

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (۳۰ hours), Practical (۲۰ hours), Total (۵۰ hours) Total Goals:
Cognitive: recognizing the following items and importance of surface and radiological findings related to their natural and clinical conditions:

1- The bones of lower and upper organs, their situation and joints of muscles, and ligaments; 2-

Types of joints, structure of joints and their function;

3- Anatomic structure and function of muscular, vascular and nervous systems and related adjacent organs;

4- Dominant myotomy of muscles and joints, sensory innervation of different zones of body; 5-

Applied, surface, clinical and radiological anatomy of musculoskeletal system;

6- Evolution of musculoskeletal system;

7- Spinal column;

Skills:

1- Bones of different zones of organs and their important clinical specifications in the skeleton; 2-

Bones of different zones of organs and their important clinical specifications in the radiological clichés;

3- Important clinical skeletal symptoms in body of live person and cadaver;

4- Important clinical muscles of different zones of organs and their function in live person (accessible muscles), cadaver and moulage;

5- Movement of organs in different joints on the live person;

6- Important clinical sensory innervations in organs on live body or cadaver;

7- Important clinical surface veins in organs and situation of organs nerves on cadaver and moulage;

8- Taking pulse of common veins in different zones of organs in live person;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of scope of each zone, structure, adjacent organs, surface, radiological and clinical anatomy of musculoskeletal system and joints of organs in order to prepare students for understanding and analyzing this system;

Necessary Content :

- Spinal column;
- Osteology of upper limb;
- Scapula and armpit walls and its concepts;
- Anterior and posterior arm and elbow cavity;
- Anterior and posterior forearm;
- Hand;
- Surface, clinical and radiological anatomy of joints;
- Osteology of lower limbs;
- Anterior and interior thigh;
- Sciatic zone and anterior thigh;
- Populite cavity;
- Continuation of feet and leg;
- Surface, clinical and radiological anatomy of joints;
- Evolution of musculoskeletal system;

Necessary Notes: all anatomy courses shall focus on the viewpoint aspects. If this course shall be trained before cardiovascular and respiratory systems, it shall include the diaphragm subject.

Head and Neck Anatomy

Code: ۱۰۳

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (۲۰ hours), Practical (۱۷ hours), Total (۳۷ hours)

Total Goals:

Cognitive: recognizing the following items and importance of surface and radiological findings related to their natural and clinical conditions:

1- Anatomic structure and elements of granum and face bones;
2- Anatomic structure and situation and adjacencies of neck elements; 3-
Perfusion and innervation of head;
4- Anatomic structure and situation and adjacencies of face, viscera and cavities elements;

Evolution of different sections of neck and face, and their evolutional disorders; Skill:

1- Important clinical skeletal and surface symptoms of each bone;
2- Important clinical sections of neck with related veins and nerves in cadaver and moulage;
3- Important clinical sections of face, viscera and cavities with related veins and nerves in cadaver and moulage;
4- Important clinical sections of skull and face in radiological clichés;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of anatomic musculoskeletal system, adjacencies, and natural evolution of head and neck in order to prepare students for understanding and analyzing disorders of this zone. It also analyzes the surface and radiological anatomy of head and neck structures.

Necessary Content:

- Analyzing cranium bones;
- Analyzing facial bones;
- Skull appearances and growth and evolution of infants skull;
- Surface elements and neck fascia;
- Anterior neck triangle;
- Posterior neck triangles;
- Face and parotid;
- Temporal and infra temporal cavity;
- Evolution of bows, ends and pharyngeal cavities;
- Face, tongue and teeth evolution;
- Clinical, applied and radiological anatomy of head and neck;

Necessary Notes: it is necessary that all anatomy courses focus on the viewpoint aspects.

Cardiovascular System Anatomy

Code: ١٠٤

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (١٧ hours), Practical (١٦ hours), Total (٣٣ hours) Total Goals:
Cognitive: recognizing the following items and importance of surface and radiological findings.

Related to their natural and clinical conditions:

1- Structure of chest including bones, muscles, vessels and wall nerves;
2- Definition, divisions and contents of mediastinum;
3- Anatomic structure and situation, and heart adjacency;
4- General anatomic appearance of blood circulation system;
5- Microscopic structure of cardiovascular, lymphatic and immunity systems;

6- Microscopic difference of different sections of cardiovascular, lymphatic and immunity systems;

7- Evolution of cardiovascular sections;

8- Evolution of venous, vessel system during embryonic and after birth period; 9-

Evolutional disorders of cardiovascular system;

Skills:

1- Scope of chest, ribs and sternum on live body and moulage;

2- Important clinical muscles, vessels and nerves of chest layer on cadaver and moulage;

3- Important clinical divisions and contents of mediastinum in cadaver and moulage;

4- Different heart levels, lateral sides and sections in cadaver and moulage;

5- Important main clinical vessels in blood circulation in cadaver and moulage;

6- Important clinical microscopic structure of heart, vessels and lymphatic organs under microscope;

7- Surface heart anatomy (sides, cavities and their hearing place) and vessels on live body or cadaver;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of structure (in both microscopic and macroscopic levels), adjacency and natural evolution of heart and blood circulation system in order to prepare students for understanding and analyzing disorders of this system. It also analyzes the surface and radiological anatomy of heart and blood circulation system.

Necessary Content :

- Ribs and sternum;
- Thorax muscles, vessels and nerves;
- Upper mediastinum;
- Mid- mediastinum;
- Posterior mediastinum;
- Main vessels of blood circulation system;
- Histology of heart and blood vessels;
- Histology of lymphatic system;
- Evolution of heart making zone, cardiac tract and heart;
- Evolution of venous and vessel system;
- Clinical, applied and radiological anatomy of cardiovascular system;

Necessary Note: it is necessary that all anatomy courses focus on the viewpoint aspects. If this course is trained before the course of musculoskeletal and respiratory systems, it shall cover the diaphragm.

Respiratory System Anatomy

Code : ١٠٥

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (٨ hours), Practical (٨ hours), Total (١٦ hours) Total Goals:
Cognitive: recognizing the following items and importance of surface and radiological findings related to their natural and clinical conditions:

1- Side space and effusions, anatomic structure, situation and adjacency of respiratory system (nose, pharynx, larynx, trachea, bronchial tree and lung);
2- Histological structure of different sections of respiratory system;
3- Evolution of different sections of respiratory system; ٤- Evolutional disorders of respiratory system;

Skills:

1- Different sections of respiratory system (nose, pharynx, larynx, and lung) and its side space and effusions in cadaver and moulage;
2- Different sections of respiratory system and related nerves and vessels in radiological clichés; 3- Histological structure of different sections of respiratory system under microscope;
4- Surface anatomy of lung and pleura limits on live body or cadaver;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of this structure (in both microscopic and macroscopic levels), adjacency and natural evolution of respiratory system in order to prepare students for understanding and analyzing disorders of respiratory system. It also analyzes the surface and radiological anatomy of this system.

Necessary Content:

- Anatomic structure and adjacency of nose, pharynx, larynx and trachea;
- Anatomic structure and adjacency of lung and pleura;
- Histology of respiratory system (trachea, divisions of bronchial tree and lung); - Evolution of respiratory system;
- Applied and radiological anatomy of respiratory system; -

Necessary Notes: it is necessary that all anatomy courses focus on the viewpoint aspects. If this course is trained before the course of musculoskeletal and cardiovascular systems, it shall cover the diaphragm.

Gastrointestinal System Anatomy

Code: ١٠٦

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (٢٦ hours), Practical (١٧ hours), Total (٤٣ hours)

Total Goals:

Cognitive: recognizing the following items and importance of surface and radiological findings related to their natural and clinical conditions:

1- Mouth and its elements, summary of pharynx, esophagus and its important clinical adjacencies, tissue structure and evolution of such elements and surface symptoms and ۹ zones of abdomen;
2- Structure of anterior wall of abdomen (related muscles, vessels, and nerves) and inguinal canal;
3- Peritoneum, peritoneal spaces, their important clinical ends and tracts;
4- Anatomic structure and situation and important clinical adjacencies of abdomen viscera (gastric tract and attached gland);
5- Bloodletting, innervation, and lymphatic discharge of important clinical viscera of abdomen (gastric tract and attached gland);
6- Microscopic structure of important clinical sections of gastric tract and attached gland;
7-Microscopic difference of important clinical sections of gastric tract and attached gland;
8-Evolution of important clinical sections of gastric tract and attached gland;
9-Evolutional disorders of gastrointestinal system;

Skills:

1- Mouth and its elements, summary of pharynx, esophagus, and its important clinical adjacency, tissue structure and evolution of such elements, surface symptoms, ۹ zones and surface situation of each of abdominal viscera in live person;
2- Peritoneal cavity and its contents in cadaver or moulage;
3- Important clinical sections of gastric tract and attached gland with related vessels and nerves in cadaver and moulage;
4- Important clinical sections of gastric tract and attached gland in radiological clichés;
5- Histological structure of important clinical sections of gastric tract and attached gland under microscope to be diagnosed and differentiated;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of structure (in both microscopic and macroscopic levels), adjacency and natural evolution of gastrointestinal system in order to prepare students for understanding and analyzing disorders of gastrointestinal system. It also analyzes the structure of abdomen wall, abdominal cavity, surface and radiological anatomy of gastrointestinal system.

Necessary Content:

- Anatomy of mouth and salivary glands;
- Histology of mouth and salivary glands;
- Pharynx and esophagus (anatomy);
- Histology of pharynx and esophagus;
- Abdominal walls and inguinal vas;
- Peritoneum;
- Stomach and small intestine (anatomy);
- Stomach (histology);
- Large intestine, rectum and anal canal (anatomy);
- Small and large intestines (histology);
- Rectum and anal canal (histology);

- Vessels and lymph and nerves of gastrointestinal system;
- Liver, gallbladder, spleen and pancreas (anatomy and histology);
- Gastric embryology;
- Clinical, applied and radiological anatomy;

Necessary Notes: it is necessary that all anatomy courses focus on the viewpoint aspects. Abdominal walls and inguinal vas may be trained in musculoskeletal system.

Endocrine Glands Anatomy

Code: ١٠٧

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (٤ hours), Practical (٦ hours), Total (١٠ hours)

Total Goals:

Cognitive: recognizing the following items and importance of surface and radiological findings related to their natural and clinical conditions:

1- Important clinical anatomic structure and adjacency of hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid;
2- Important clinical vessels and nerves in hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid;
3- Important clinical microscopic structure of hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid;
4- Evolution of hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid; 5- Congenital disorders of endocrine glands;

Skill:

1- Place of hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid in cadaver and moulage;
2- Surface symptoms of endocrine gland on live person or cadaver; 3- Place of gland in radiological clichés;
4- Histological structure of hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid under microscope;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of structure (in both microscopic and macroscopic levels), adjacency and natural evolution of endocrine glands in order to prepare students for understanding and analyzing disorders of endocrine glands. It also analyzes the structure of abdomen wall, abdominal cavity, surface and radiological anatomy of endocrine glands.

Necessary Content:

- Anatomy of hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid;
- Histology of hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid;
- Evolution of hypothalamus, hypophysis, adrenal, pancreas, thyroid and parathyroid;
- Clinical, applied and radiological anatomy of endocrine glands;

Necessary Notes: it is necessary that all anatomy courses focus on the viewpoint aspects.

Nervous System Anatomy

Code: ١٠٨

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (٢٥ hours), Practical (١٤ hours), Total (٣٩ hours)

Total Goals:

Cognitive: recognizing the following items and importance of their related clinical and radiological symptoms:

1- Types of classification of nervous system;
2- Natural function of neurons and glial cells;
3- Appearance, structure and function of white and gray matters of spinal cord; 4-
Element of a spinal cord and nervous networks;
5- Appearance, important clinical structure and function of cores and nervous tracts of medulla oblongata, pons and midbrain;
6- Important clinical anatomic structure and function of cerebellum, Diencephalon, and brain cortex;
7- Important clinical anatomic structure and function of basal ganglia, limbic system and netted structures;
8- Structure of important clinical curtains and vessels of brain;
9- Histological structure of important clinical sections of central nervous system;
10- Evolution of important clinical sections of central nervous system; ١١- Evolution disorders of nervous system;

Skills:

1- Important clinical relation of spinal cord and spinal column in longitudinal and latitudinal sections in radiological clichés;
2- Important clinical nervous dermatomes on body a live human;
3- Related spinal cord and curtains in cadaver and moulage;
4- Important clinical sections of nervous system (brainstem, Diencephalon and brain hemispheres) in cadaver and moulage;
5- Brain vessels and curtains and important clinical places of cranial nerves in cadaver and moulage;

6- Important clinical sections of nervous and related cardiovascular systems in radiological clichés;

7- Histological structure of important clinical sections of nervous system under microscope;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of structure (in both microscopic and macroscopic levels), adjacency and natural evolution of central nervous system in order to prepare students for understanding and analyzing disorders of central nervous system. It also analyzes the surface and radiological anatomy of central nervous system.

Necessary Content:

- Classification of nervous system, vertebral canal and appearance and internal structure of spinal cord;
- Nervous tracts;
- Medulla oblongata, pons and midbrain;
- Cerebellum;
- Diencephalon;
- Brain hemispheres;
- White matter, brain interference and basal ganglia;
- Limbic system and netted structures;
- Brain vessels and curtains;
- Autonomy nervous system;
- Structure of cranial nerves;
- Forming the nervous tract;
- Histology of central nervous system;
- Applied and radiological anatomy of brain and spinal cord (making vessels and brain curtains and skill venous sinus);
-

Necessary Notes: it is necessary that all anatomy courses focus on the viewpoint aspects.

Special Senses Anatomy

Code: ١٠٩

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (١٤ hours), Practical (٤ hours), Total (١٨ hours)

Total Goals:

Cognitive: recognizing the following items and importance of their related clinical and radiological symptoms:

1- Anatomic structure of orbit, eyeball, and attachments of sight system; 2-

Eye vessels and nerves, and organs of sight system;

3- Anatomic structure of external, inner and middle ears;

4- Surface and radiological anatomy of sight and hearing- balancing system; 5-

Microscopic structure of eye and organs of sight system;

6- Microscopic structure of ear;

7- Evolution of different sections of sight system;

8- Evolution of different sections of hearing- balancing system;

9- Congenital disorders of sight, hearing- balancing systems;

Skills:

1- Important clinical sections of sight system (orbit, eyeball, and its organs) in cadaver and moulage;

2- Important clinical sections of hearing- balancing system (external, inner and middle ears) in cadaver and moulage;

3- Surface signs of important clinical sections of sight and hearing- balancing systems on live person or cadaver;

4- Important clinical sections of two systems in radiological clichés;

5- Eye movements in live person, and their nervous- muscular relations;

6- Histological structure of different sections of sight and hearing- balancing systems under microscope;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of structure (in both microscopic and macroscopic levels), adjacency and natural evolution of special senses of sight, hearing and balancing systems in order to prepare students for understanding and analyzing disorders of these systems. It also analyzes the surface and radiological anatomy of special senses.

Necessary Content:

- Anatomy of orbit, eyeball and organs of sight system;
- Vessels and nerves of eye and sight system;
- External, middle and inner ears;
- Histology of ear and eye;
- Evolution of sight system;
- Evolution of sight system;
- Clinical and radiological anatomy of ear and eye;
- Nervous tracts of sight and hearing systems;

Necessary Notes: it is necessary that all anatomy courses focus on the viewpoint aspects.

Genitourinary System Anatomy

Code: ١١٠

Presentation: Basic Sciences of Medicine

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (١٤ hours), Practical (٨ hours), Total (٢٢ hours)

Total Goals:

Cognitive: recognizing the following items and importance of surface and radiological findings related to their natural and clinical conditions:

1- Structure of hips including important clinical bones, joints, muscles, vessels and nerves;
2- Dimensions of hips, measurement methods and differences of men and women hips;
3- Anatomic structure and situation and adjacencies of important clinical sections of men reproductive system (internal and external structures);
4- Anatomic structure and situation and adjacencies of important clinical sections of women reproductive system (internal and external structures);
5- Blood perfusion, innervation and lymphatic discharge of important clinical sections of men and women reproductive system;
6- Dimensions and contents of perineum;
7- Surface and radiological anatomy of men and women reproductive system;
8- Microscopic structure of important clinical sections of men and women reproductive system; 9- Microscopic difference of important clinical sections of men and women reproductive system; 10- Evolution of important clinical sections of men and women reproductive system;
11- Evolutional disorders of genitourinary system;

Skills:

1- Important clinical structures of hips including bones, joints, muscles, vessels and nerves in cadaver and moulage;
2- Measurement of dimensions of hips and difference of men and women hips;
3- Important clinical sections of men reproductive system (internal and external structures) in cadaver and moulage;
4- Important clinical sections of women reproductive system (internal and external structures) in cadaver and moulage;
5- Important clinical vessels, nerves and adjacencies related to the men and women reproductive system in cadaver and moulage;
6- Perineum dimensions and contents in men and women and their difference in cadaver;
7- Different sections of men and women reproductive system in radiological clichés;
8- Histological structure of different sections of men and women reproductive system under microscope;

Description: as an integrated part of educational program of basic sciences of students of medicine, this course trains the principles, concepts and considerations of structure (in both microscopic and macroscopic levels), adjacency and natural evolution of hips and reproductive system in men and women in order to prepare students for understanding and analyzing disorders of reproductive system in men and women. It also analyzes the surface and radiological anatomy of reproductive system in men and women.

Necessary Content:

- Anatomy of hips;
- Anatomy and histology of kidney;
- Anatomy and histology of ureter, bladder and urethra;
- Embryology of genitourinary system;
- Clinical, applied and radiological anatomy of genitourinary system;
- Anatomy and histology of testicle, epididymis and Vas deferens tract;
- Anatomy and histology of prostate, seminal vesicle, and bulbourethral gland;
- Anatomy and histology of ovary, uterus and its tract;
- Perineum and surface and depth perineum space;
- Sex organ/ external sex organ of women and vagina; -

Necessary Notes: it is necessary that all anatomy courses focus on the viewpoint aspects.

Courses of Physiology

- Cell physiology;
- Respiration physiology;
- Heart physiology;
- Nerves and special senses physiology;
- Blood circulation physiology;
- Gastrointestinal system physiology;
- Blood physiology;
- Gland and reproduction physiology;
- Kidney physiology;

Cell Physiology

Code: ١١١

Presentation: Basic Sciences of Medicine

Prerequisite: -

Type of Course: Theoretical (١٤ hours), Practical (- hours), Total (١٤ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the cell function in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Physiology, the cellular messages;
2- Cell membrane and its constituents, passage of matters through the cell membrane; 3- Rest and function potential;
4- Contraction of skeletal muscles and flat muscles;
5- Internal environment and homeostasis and role of different body systems in causing it;
6- The difference of combination of intracellular and extracellular liquid and the reason of causing it;
7- The intracellular messages;
8- The cellular membrane constituents and their function;
9- Matters transfer methods through cellular membrane;
10-Membrane rest potential and function potential;
11- Absolute and relative non-irritability process and the reason of causing it;
12- Contraction of skeletal muscle;
13- Contraction of flat muscle and its differences with the skeletal muscle;

Description: learning the general subjects related to the cell structure and their natural function, resting potential and function potential, specifications of muscular cells and their physiological function;

Necessary Content:

1- Hemostasis and body systems function regulation mechanisms;
2- Cell membrane and its elements, transferring matters through membrane and its methods (distribution, facilitated distribution, active transfer, and osmosis);
3- Membrane resting potential and its physical basis;
4- Function potential and its processes, function potential appearance and distribution; 5- Physiological analysis of skeletal muscle;
6- Muscular contraction and its mechanism;
7- Movement unit and muscular tension, classification of types of movement units; 8- Nerve- muscle synapse;
9- Stimulation- contraction couple in skeletal muscle and its mechanism;
10- Flat muscle and its types;
11- Contraction mechanism in flat muscle and its comparison with the skeletal muscle;
12-Membrane and function potentials in flat muscle and effect of hormone and local factors on it;

Heart Physiology

Code: ۱۱۲

Presentation: Basic Sciences of Medicine

Prerequisite: Cell Physiology

Type of Course: Theoretical (۸ hours), Practical (۲ hours), Total (۱۰ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the heart function in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Heart, cavities and layers;
2- Heart muscle, heart function potential, heart muscular cell contraction; 3-
Heart cycle and its processes;
4- Heart activity control;
5- Electrocardiogram diagram;
6- Blood movement path in heart in a heart cycle;
7- Physiological specifications of heart muscle and its difference and similarity with skeletal muscle;
8- Heart muscle contraction processes and mechanism;
9- Heart muscular cell function potential and its processes and differences with skeletal muscle;
10- Heart stimulus- conduction system elements, heart pulse control; ۱۱- Heart cycle and processes;
12- Concepts of the cardiac output, ending systole volume, ending diastole volume, and pulse volume;
13- Pre and post-load and its effect on the cardiac output;
14- Sympathetic and parasympathetic system in heart function control;
15- Electrocardiogram diagram and its elements;
16- Cardiac derivations and electrodes connection method; ۱۷- Providing P, QRS and T electrocardiogram waves;

Description: introduction to the physiological structure of heart and its elements, contraction mechanism in heart muscle, cardiac output, general electrocardiogram principles and its relationship with heart cycle and abnormal changes of electrocardiogram;

Necessary Content:

1- Physiological anatomy of heart muscle;
2- Function potential in heart muscle;
3- Contraction mechanism in heart muscle and the role of calcium ions; 4-
Heart cycle and its processes;
5- Relation of electrocardiogram and heart sounds with heart cycle; 6-
Cardiac output and its regulation, volume- pressure curve;
7- Effect of ions changes on the heart function;

8- The stimulus- conductive system of heart and heart signal transfer;
9- Rhythmicity of sinus- vestibular node and its mechanism;
10- Rhythm control and heart signal conduction;
11- Natural electrocardiogram and its waves;
12- Relation of heart cycle and electrocardiogram;
13- Cardiac derivations;
14- Principles of electrocardiogram vector analysis and heart axle;
15- Electrocardiogram in different steps of heart cycle;
16- Determining the heart electrical axle from electrocardiogram;
17- Deviation of heart axle in some diseases;
18- Lesion flow and its effect on the electrocardiogram;
19- Abnormal changes of electrocardiogram waves and its reasons;

Respiration Physiology

Code: ١١٣

Presentation: Basic Sciences of Medicine

Prerequisite: Cell Physiology

Type of Course: Theoretical (١٠ hours), Practical (٤ hours), Total (١٤ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the function of respiration system in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Elements of respiration system (respiration tract and its divisions, air bag and types of its cells), and their duties;
2- Pulmonary ventilation;
3- Gas exchange among alveolar and blood and among blood and body cells;
4- Gas transfer in blood, respiration centers and respiration regulation;
5- Pulmonary blood circulation and its differences with instrumental blood circulation; 6- Pleura and its role in respiration system;
7- Non- respiration actions of lung;
8- Bronchial blood circulation and its difference with pulmonary blood circulation; 9- Respiration cycle, aspiration;
10- Changes of intra-pulmonary pressure and pleura pressure in a respiration cycle;
11- Surfactant secretion and its role in reducing the surface tension;
12- Lung function tests and pulmonary volumes and capacities;
13- Pulmonary ventilation, Alveolar ventilation, differences and calculation of pulmonary ventilation and Alveolar ventilation;
14- Ratio of ventilation to the blood circulation and its role in gas vessel pressure;
15- Gas exchange among blood and bubbles;

16- Gas exchange among blood and tissue cells;
17- Oxygen and CO_2 transfer ways in blood;
18- Ox hemoglobin analysis curve and its specifications;
19- Respiratory control centers and its role in respiration regulation;
20- Peripheral chemical receptors and their role in respiration regulation;
21- Central chemical receptors and their role in respiration regulation;

Description: introduction to the physiological anatomy of respiratory system, pulmonary ventilation and its mechanism, exchange and transfer of gases in lungs and tissues, and respiration regulation mechanisms and respiratory centers;

Necessary Content:

1- Lungs ventilation mechanics;
2- Pleura, its pressure and its changes in respiration; 3-
Compliance of lungs and chest;
4- Pulmonary volumes and capacities;
5- Bubble ventilation and dead space;
6- Respiratory tract and its functions;
7- Reflection for cough, sneezing and speaking;
8- Pulmonary blood circulation and its specifications; 9-
Pulmonary edema and its mechanism;
10- Distribution of gases in alveolar and body tissues and its effective factors;
11- Ratio of ventilation to blood circulation and its changes;
12- Concept of shunt and physiological space;
13- Oxygen transfer in blood and role of hemoglobin therein;
14- Ox hemoglobin analysis curve and its changing factors;
15- CO_2 transfer in blood;
16- CO_2 analysis curve;
17- Respiratory control;

Nerves and Special Senses Physiology

Code: ١١٤

Presentation: Basic Sciences of Medicine

Prerequisite: Cell Physiology

Type of Course: Theoretical (٢٤ hours), Practical (٤ hours), Total (٢٨ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the function of nerves and special senses in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Structure of nervous system, synapses and nervous mediators;

2- Sensory system;

3- Types of senses and sensory routes and understanding; 4-

Movement system;

5- Movement centers and movement control method by them;

6- Brain higher actions, limbic system, speech, memory and sleeping; 7-

Structure and actions of autonomous system;

8- Special senses;

9- Types of neurons;

10- Types of synapses, ion events in synapse, synapse transfer;

11- Neuron communities, synapse formability;

12- Types of nervous mediator;

13- Types of nervous fibers and their conduction speed;

14- Sensory receptors, their types and roles;

15- Concept of compromise receptor potential and separation sensitivity;

16- Electrical events and receptor potential mechanism;

17- Sensory messages transfer routes to central nervous system and their differences;

18- Pain, types and its nervous routes;

19- Recurrent or distributive pains;

20- Brain and spinal column anti-pain system;

٢١-Eat receptors and its transfer route;

22- Structure of spinal column and organization of spinal column for performing the movement actions;

23- Reflection and its types;

24- Different sections of brainstem and the role of its elements and cores;

25- Role of vestibular system, utricle, saccule, and semi-circle tract in balance;

26- Structure of cerebellum and its practical anatomic classification;

27- Neuron circuit of cerebellum and its disorders;

28- Structure of node cores and their disorders;

29- Different sections of brain movement membrane and their duties;

30-Movement routes, spinal membrane route, relation of sense and movement;

31- Limbic system and its different sections;

32- Speech zones and its role;

33- Learning and memory;

34- Sleeping, types and specifications;

35- Brain waves and their changes in different steps of sleeping and awakening;

36- Physiological structure of autonomous nervous system;

37- Routes of sympathetic system, neuron mediators and duties of this system;

38- Routes of parasympathetic system, neuron mediators and duties of this system;

39- Difference of sympathetic and parasympathetic systems and difference of autonomy system with physical movement system;

40- Physiological structure of eye, sight receptors and its routes;

41- Physiological structure of ear and its routes;

42- Physiology of olfactory and tasting senses and its sensory routes; ٤٣- CSF, brain- blood obstacle and their role;

Description: introduction to the physiological anatomy of nervous system, learning of sense and movement physiology, routes and nervous centers of its control and regulator, sympathetic and parasympathetic system and brain higher actions;

Necessary Content:

1- Introduction to the physiological structure of nervous system; 2-

Functional levels of central nervous system;

3- Types of synapses and neurotransmitters;

4- Types of nervous fibers and their conduction and processing;

5- Conducting and processing the nervous messages, spatial and time collection; 6-

Physical senses and their specifications, sensory receptors;

7- Sensory signals conduction routes and its specifications and related brain zones; 8-

Pain physiology and their receptors and routes;

9- Heat receptors and its stimulus mechanism;

10- Sensory receptors of muscles and their role;

١١-Different spinal reflections and their role in muscles control;

12-Movement layers, movement messages transfer routes;

13- Physiological anatomy of cerebellum, its role in controlling movements;

14- Nodes cores and their role in movement;

15- Different zones of brain cortex related to the movement actions;

16- Limbic system and its role, hippocampi and amygdala actions;

17-Memory, types and mechanisms;

18- Sleeping and its types, brain waves and changes in sleeping and epilepsy;

19- The role of sympathetic and parasympathetic systems in body and its control and role of hypothalamus;

20- Physiological anatomy of eye, sight receptors and nervous routes;

21- Physiological anatomy of ear and hearing sensory routes;

22- Olfactory and tasting receptors and its nervous route;

23- Vestibular senses and its role in balancing;

24-Metabolism and brain blood circulation and its regulation; ٢٥- CSF and its duties;

Blood Circulation Physiology

Code: ١١٥

Presentation: Basic Sciences of Medicine

Prerequisite: Cell Physiology

Type of Course: Theoretical (١٩ hours), Practical (٤ hours), Total (٢٣ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the function of blood circulation system in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Basic physical concepts of blood circulation and pulmonary system; 2-
Structure of blood vessels, their similarities and differences;
3- Exchange of fluids and matters between and blood and body cells; 4-
Structure and duties of lymphatic system;
5- Blood pressure, effective factors and its regulation;
6- Coronary blood circulation and its control mechanism;
7- Systematic and pulmonary blood circulation, their elements and differences;
8- Relations between blood pressure, blood circulation and venous strength in relation to the Ohm and Poiseuille law;
9- Measuring blood circulation and difference of linear and tornado circulation, and determining and distinguishing it;
10-Matters between plasma and interstitial fluid;
11- Capillary filtration and effective factors in terms of Starling law;
12- Lymphatic system, its structure and actions;
١٣-Blood pressure, medium vessel pressure and pulse pressure and their effective factors;
14- Local control of blood circulation as short and long-term;
15- Nervous and hormone control of blood circulation;
16- Short-term and long-term regulation of blood pressure;
17- The role of kidneys and renin- angiotensin system in long- term regulation of blood pressure; 18-
Hormone control of blood pressure and their role in regulating the blood pressure;
19- Changes of coronary blood circulation by changing the heart cycle; ٢٠- Nervous and chemical regulation of coronary blood circulation;

Description: introduction to the structural and physiological anatomy of vessels, hemodynamics, exchange of matters in blood vessels, tissue blood circulation and its regulation, blood pressure and short-term and long-term regulation mechanisms, and physiology of coronary blood circulation;

Necessary Content:

1- Physical elements of blood circulation system and their specifications; 2-
Hemodynamics;
3- Venous resistance and its effective factors;
4- Vasodilation in venous and vessel system and volume- pressure curve; 5-
Pressure pulse and its abnormal forms;
6- Measuring the blood pressure;
7- Vessels and their actions;
8- Structure and role of arterioles;
9- Capillary filtration and its effective factors;
10- Lymph, lymphatic system and their physiological role;
11- Chronic and serious control of blood circulation and tissues and its regulation;

12- Effective factors on the blood pressure;
13- Short and long- term regulation of blood pressure;
14- Role of kidneys in regulation of blood pressure;
15- Primary and secondary hypertension;
16- Cardiac output and its regulation;
17- Cardiac output curve and its effective factors;
18-Musculoskeletal blood circulation and its control;
19- Coronary blood circulation and its effective factors;
20- Definition of shock and its steps;
21- Types of shock and their specifications;

Gastrointestinal System Physiology

Code: ١١٦

Presentation: Basic Sciences of Medicine

Prerequisite: Cell Physiology

Type of Course: Theoretical (١٠ hours), Practical (٤ hours), Total (١٤ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the function of gastrointestinal system in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Structure and function of gastrointestinal system; 2-
Movements of gastrointestinal system;
3- Secretions of gastrointestinal tube and their function;
4- Matters digestion and absorption process in different sections of gastrointestinal tract;
5- Functions of bile, saliva, pancreas and liver;
6- Nervous and hormone control of gastrointestinal system; 7-
Swallow and its processes;
8- Mixing and impeller movements of gastrointestinal tract and their role; 9-
Stomach movements and their role in food digestion;
10- Immigrant myoelectric complex and hungry contractions;
11- Stomach discharge regulation mechanisms;
12- Types of movements of small intestine, their role and their controlling mechanisms;
13-Movements of different sections of large intestine, their specifications and control; 14-
Bowel reflex;
15- Secretion gland, combination of saliva and regulation of saliva secretion;

16- Types of stomach cells and type of their secretions;
17- Stomach acid production mechanism;
18- Stomach secretions regulation mechanisms and its processes;
19- Secretions of pancreas, effects and regulation;
20- Bile and its role ion fats digestion and absorption;
21- Intestinal- hepatic flow of bile;
22- Secretions of small intestine and large intestine and their regulations;
23- Carbohydrates absorption and digestion mechanism;
24- Proteins absorption and digestion;
25- Fats absorption and digestion in gastrointestinal tract;
26- Reabsorption of water, sodium, calcium, iron and vitamins in different sections of gastrointestinal tract;
27- Short, medium and long-term regulation of nutrition;
28- Role of liver in different matters metabolism;

Description: introduction to the physiological anatomy of gastrointestinal system, movements and secretion in different sections of gastrointestinal system, matters absorption mechanism in different sections of gastrointestinal tract and role of salivary glands, bile, pancreas and liver;

Necessary Content:

1- Functional anatomy of gastrointestinal system;
2- Movements of different sections of gastrointestinal system, its nervous and hormone control; 3- Desorption reflex and its control;
4- Secretions of different sections of gastrointestinal system and their regulation; 5- Bile and its role in matters absorption and desorption;
6- Secretions of pancreas and their role;
7- Absorption and desorption of carbohydrates, fats and proteins; ٨- Liver functions in different matters metabolism;

Blood Physiology

Code: ١١٧

Presentation: Basic Sciences of Medicine

Prerequisite: Cell Physiology

Type of Course: Theoretical (٥ hours), Practical (٢ hours), Total (٧ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the function of blood in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Blood and its constituents, plasma constituents and difference of plasma and serum;

2- Physiology of RBC, their synthesis and destruction, structure of hemoglobin and its synthesis method, metabolism of iron, anemia, polycythemia, and their effects on heart and blood circulation system;

3- Physiology of WBC, types of WBC, specifications and place of their synthesis and maturity, role of neutrophils and tissue macrophages in immunity system;

4- Physiology of platelets, cloning factors and mechanism of blood coagulation, hemostasis processes and role of platelets in them;

Description: introduction to the physiology of blood, RBC, WBC and platelets and their functions and mechanism of blood coagulation;

Necessary Content:

1- RBC and its production and maturity, role of erythropoietin, B١٢ vitamin and folic acid; 2- Formation of hemoglobin;

3- Iron metabolism;

4- Anemia and its types and its effects on blood circulation system; 5- Polycythemia and its effects on blood circulation system;

6- WBC and its types;

7- Reticuloendothelial system;

8- Inflation and role of WBC;

9- Functions of basophiles, eosinophils and macrophages;

10- Platelets and their role in blood cloning;

11-Mechanism of blood coagulation, internal and external ways;

12- Blood coagulation test, blood coagulation disorders;

Glands and Reproduction Physiology

Code: ١١٨

Presentation: Basic Sciences of Medicine

Prerequisite: Cell Physiology

Type of Course: Theoretical (٢٠ hours), Practical (٤ hours), Total (٢٤ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the function of glands and reproduction system in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Role of endocrine glands in body hemostasis, structure of hormones, their synthesis and mechanism;

2- Hypothysis hormones and their control by hypothalamus;

3- Thyroid hormones and their metabolic effects;

4- Adrenal cortex hormones and their metabolic effects;

5- Pancreas hormones and their physiological effects;

6- Parathyroid hormone and controlling mechanisms of calcium and phosphate of extracellular liquid;
7- Sexual hormones and their role in body;

Description: introduction to the physiology of hormones and their mechanism, hormones secreted from hypophysis, adrenal, pancreas, men and women sexual gland and hormones effective on calcium and phosphate metabolism;

Necessary Content:

1- Hormones mechanism;
2- Hypophysis and its physiological relations with hypothalamus; 3-
Physiological functions of growth hormone and its regulation; 4-
Posterior hypophysis hormones and their physiological role; 5-
Thyroid hormones production and secretion;
6- Physiological actions of thyroid hormones and its regulation;
7- Physiological functions of adrenal cortex hormones;
8- Insulin, its metabolic effects and regulation;
9- Glucagon and its physiological functions and its regulation;
10-Metabolism of calcium and phosphate and their physiological role;
11- Bone and its formation and absorption mechanism;
12-Mechanism of effect and role of parturman, vitamin D hormones; 13-
Physiological anatomy of men sexual organs;
14- Testosterone, its regulation and physiological functions;
15- Physiological anatomy of women sexual organs;
16- Physiological changes in monthly cycle;
17- Physiological functions of estrogen and progesterone;

Kidney Physiology

Code: ١١٩

Presentation: Basic Sciences of Medicine

Prerequisite: Cell Physiology

Type of Course: Theoretical (١٢ hours), Practical (٤ hours), Total (١٦ hours)

Total Goals: expecting in this course to learn the physiological concepts, principles and mechanisms related to the function of kidney in any of the following cases, and recognize them in natural and physiologically modified processes;

1- Structure of kidneys, nephrons and body urinary system; 2-
Kidney processes;
3- Regulating the glomeruli filtration and its effective factors;
4- Matters reabsorption and secretion in different sections of nephrons;

5- Nervous and hormone control of volume and osmolality of body fluids; 6-
Body pH regulation mechanisms;
7- GFR self- regulating concept and its mechanisms;
8- Elements of juxtaglomerular system and its role in GFR self- regulating; 9-
Nervous and hormone regulation of GFR;
10-Matters reabsorption and secretion in proximal tract;
11-Maximum transfer and threshold of glucose kidney disposal;
12-Matters reabsorption and secretion in Loop of Henle, distal tract and collector tract;
13- Urine condensation mechanism;
14- Effective factors on providing and keeping the upper osmolality of kidney center;
15- Role of sympathetic system in keeping the body fluids volume;
16-Mechanism of angiotensin, aldosterone, and ANP in regulating the body fluids volume;
17- Role of Smearpectors in regulating the osmolality of extracellular fluids;
18- Body fluids pH regulation mechanisms and the role of respiratory and renal system;

Description: introduction to the nephron and its elements, glomeruli filtration and its regulation, matters reabsorption and secretion in different sections of nephron, blood osmolality regulation and renal control of body acid- base;

Necessary Content:

1- Body fluids and its sections;
2- Osmosis, osmotic pressure and osmolality of body fluids;
3- Hypo and hypernathermic effect on regulating the body fluids volume; 4-
Edema, reasons and factors effective on it;
5- Physiological anatomy of kidneys, nephron;
6- Urination reflex and its control;
7- Glomerular filtration and its effective factors;
8- Matters reabsorption in different sections of nephron in primitive tubule, Loop of Henle, ending tubule and collector tract;
9- Renal clearance in estimation of renal filtration and renal blood circulation;
10- Kidney mechanisms in dense and diluted urination;
11- Osmolality control and regulation of concentration of sodium of extracellular fluid;
12- Anti- urinary hormone, its role and effective factors on its secretion;
13- Regulating the extracellular potassium;
14- Controlling the concentration of calcium and its renal absorption and secretion;
15- Definition of acid and base and body defensive mechanisms against its changes;
16- Respiratory control of acid- base disorders;
17- Renal control of acid- base disorders;

Courses of Medical Biochemistry

Cellular- Molecular Biochemistry

Discipline Biochemistry

Hormones Biochemistry

Kidney Biochemistry

Cellular- Molecular Biochemistry

Code: ١٢٠

Presentation: Basic Sciences of Medicine

Prerequisite: -

Type of Course: Theoretical (٣٢ hours), Practical (١٥ hours), Total (٤٧ hours)

Total Goals: introduction to the clinical importance, structure, classification, properties and function of biomolecules including water and tampons, amino acids, carbohydrates, lipids, proteins, enzymes, vitamins, and nucleotides, and also introduction to the gene replication process using the nucleic acids;

Description: introduction to the biomolecules to learn the metabolism of such matters in discipline biochemistry; this collection of structural and functional information is presented to play role in analysis of health and disease;

Necessary Content:

1- Water and Tampons: structure of water, hydrogen bonds, Henderson- Hassel Bach equation, acid and base, definition of tampon, important body tampon, definition of acidosis and alkalosis and their clinical importance;
2- Amino Acids and Proteins: structure of amino acids, physiochemical properties, classification of amino acids, necessary and unnecessary amino acids, titration of amino acids, the ١st, ٢nd, ٣rd and ٤th structures of proteins, proteins folding and loosing, structure and function of myoglobin, structure and function of hemoglobin, structure and function of collagen and their clinical importance;
3- Carbohydrates: definition, structure of carbohydrates, physiochemical properties, derivatives of monosaccharide, disaccharides, hemopolysaccharides, hetero-polysaccharides, glycoproteins and their clinical importance;
4- Lipids and Lipoproteins: structure, types and physiochemical properties of fatty acids, types of lipids (tricyclic glycerol, esterified and open cholesterol, phospholipids and sphingolipids), liposomes, Miessel and emulsion, special proteins (apo-lipoproteins), types of lipoproteins and their clinical importance;

5- Enzymes: definition, classification, structure, nomenclature, active position, enzymes mechanism, determining the enzyme activity, effective factors on enzyme function, Michaelis Menten equation, types of enzymes controller, isoenzymes, types of orderly and disorderly enzyme reaction, regulating the enzymes function and their clinical importance;

6- Vitamins: definition, classification, structure of vitamins, coenzyme role, water solvable vitamins, fat solvable vitamins, vitamins deficiency disorders and their clinical importance;

7- Nucleic Acids: constituents of nucleic acids (RNA and DNA), nucleosides, nucleotides, structure of DNA and its types, structure of RNA and its types;

8- Replication: prokaryotes and eukaryotes replication process, their repair and clinical importance;

Discipline Biochemistry

Code: ۱۲۱

Presentation: Basic Sciences of Medicine

Prerequisite: Cellular- Molecular Biochemistry

Type of Course: Theoretical (۲۲ hours), Practical (۱۵ hours), Total (۳۷ hours)

Total Goals: introduction to the importance of oxidative phosphorylation, metabolism paths of carbohydrates, lipids, amino acids and non-protein nitrogenized compounds and blood clinical enzymes, introduction to the quality and quantity changes of molecules and metabolites in clinical manifestations of different diseases related to each metabolism path, and also clinical importance of measuring the blood enzymes and some other fluids in body including blood, introduction to the importance of integrity of metabolism of triple matters under physiological conditions;

Description: introduction to the importance of oxidative phosphorylation, metabolism paths of carbohydrates, lipids, amino acids and non-protein nitrogenized compounds under physiological conditions, and also the role of such paths in related diseases;

Necessary Content:

1- Oxidative Phosphorylation: thermodynamic laws, free energy changes, reduction potential, electron transfer chain, osmosis chemistry theory, electron transfer chain preventers;

2- Carbohydrates Metabolism: digestion and absorption, glycolysis path, pyruvate oxidation, Krebs cycle, gluconeogenesis, glycogenesis, glycogenolysis, fructose metabolism, and galactose metabolism;

3- Amino Acids Metabolism: absorption and digestion, general amino acids catabolism reactions, urea cycle, specialized amino acids catabolism reactions (aromatic, branched and sulfur amino acids), unnecessary amino acids biosynthesis, compounds biosynthesis derived from amino acids;

4- Clinical Enzymology: the reasons of increasing and decreasing the serum activity of intracellular enzymes, necessary measures for clinical application of enzymes, clinical importance of enzymes (alkaline phosphatase, phosphatase acid, ۵ nucleotides enzyme, Gama glutamic trans peptidase, aminotransferases, lactate dehydrogenase, keratin phosphokinase, Colin stares, aldose, amylase and lipase);

5- Lipid and Lipoprotein Metabolism: fats absorption and digestion, chylomicron metabolism, VLDL metabolism, LDL and HDL metabolism, lipoproteins metabolic paths diseases, fatty

acids biosynthesis path, beta oxidation of fatty acids, cholesterol biosynthesis, ketone objects biosynthesis;

6- Nucleotide Metabolism: De Novo path, purine biosynthesis, Salvage path, purines biosynthesis, regulating the purines biosynthesis path, purines catabolism, purines metabolic path diseases, De Novo path of pyrimidine biosynthesis, Salvage path of pyrimidine biosynthesis, regulating the pyrimidine biosynthesis path, pyrimidine catabolism, pyrimidine metabolic path diseases;

7- Non-Protein Nitrogenized Compounds Metabolism: hem biosynthesis, diseases related to hem biosynthesis, porphyria, hem catabolism, hem catabolism diseases;

8- Metabolic Paths Integrity: the importance of key and regulatory positions in metabolic paths, the importance of different tissues in metabolic paths, metabolic paths in liver and fatty tissue, metabolic paths in muscle tissue and after eating food, metabolic paths in fasting, metabolic paths after long hungry;

Hormones Biochemistry

Code: ۱۲۲

Presentation: Basic Sciences of Medicine

Prerequisite: Cellular- Molecular Biochemistry, Discipline Biochemistry

Type of Course: Theoretical (۱۲ hours), Practical (- hours), Total (۱۲ hours)

Total Goals: introduction to the importance of hormones of hypothalamus, posterior and anterior hypophysis, pancreas, thyroid, cortex and central parts of adrenal gland, regulatory hormones of calcium and sexual hormones, introduction to the importance of integration of endocrine gland system as a coordinator mean and hemostasis and understanding its role in total control of body exchanges and needs;

Description: introduction to the importance and role of each hormone of hypothalamus and posterior and anterior hypophysis, hormones of pancreas, thyroid, cortex and central parts of adrenal gland, regulatory hormones of calcium and sexual hormones in related diseases;

Necessary Content:

1- An introduction to Hormones (Generalities): types of hormones classification, chemical structure of hormones;

2- Hypothalamus and Posterior and Anterior Hypophysis Hormones: chemical structure of hormones secreted from anterior hypophysis, the role of hormones secreted from the anterior hypophysis on metabolism of proteins, fats and carbohydrates, chemical structure of hormones secreted from the posterior hypophysis, the role of hormones secreted from the posterior hypophysis, diseases related to the hormones secreted from the anterior hypophysis, the growth hormone synthesis method;

3- Pancreas Hormones: endocrine hormones of islets of Langerhans in pancreas by focusing on the insulin and glucagon, chemical structure of insulin hormone, the role of insulin on metabolism of proteins, fats and carbohydrates, the function of somatoacetatin;

4- Thyroid Hormones: the processes of thyroid hormones generation and secretion, structure of thyroid hormones, mechanism of thyroid hormones synthesis, the importance of changing thyroxin to triiodothyronine, the functions of thyroid hormone by focusing on the metabolic activity of cell, and on metabolism of carbohydrates, fat and protein, the regulatory factors of

thyroid hormones secretion, feedback effects of thyroid hormones on hypophysis and hypothalamus, anti- thyroid matters and their mechanism, hyperthyroidism and hypothyroidism;

5- Cortex and Central Parts of Adrenal Hormones: types of mineralocorticoids and glucocorticoids in adrenal cortex by focusing on the aldosterone and cortisol, chemical structure of adrenal cortex hormones, disorders of adrenal cortex hormones by focusing on the Addison and Cushing;

6- Adrenal Central Hormones: chemical structure of adrenal central hormones, mechanism of adrenal central hormones, regulatory factors of secretion of adrenal central hormones, function of adrenal central hormones, the effect of cortisol on metabolism of proteins, fats and carbohydrates, regulating the secretion of adrenal central hormones;

7- Calcium Regulatory Hormones: the importance of calcium in body and its advantages, generalities of calcium hemostasis, chemical structure of calcium regulatory hormones (parathyroid and calcitonin, ١- and -٢٥ Dihydroxycollagen-ferrosilicon), disorders related to the calcium regulatory hormones (parathyroid and calcitonin, ١- and -٢٥ Dihydroxy-collagen-ferrosilicon);

8- Sexual Hormones: androgens as hormones secreted from testicle, chemical structure of androgens, biosynthesis and secretion of androgens, regulating the synthesis and secretion of androgens, estrogens as hormones secreted from testicles, chemical structure of androgens, androgens biosynthesis and secretion, function of androgens, progestin as hormones secreted from testicles, chemical structure of progestin, progestin biosynthesis and secretion, sexual hormones diseases;

Kidney Biochemistry

Code: ١٢٣

Presentation: Basic Sciences of Medicine

Prerequisite: Cellular- Molecular Biochemistry, Discipline Biochemistry

Type of Course: Theoretical (٤ hours), Practical (- hours), Total (٤ hours)

Total Goals: introduction to the clinical importance of keeping water balance, blood pH balance, and function of elements including the main and rare elements, introduction to the disorders of water and sodium imbalance, calculating the shortage of water or sodium in patients, introduction to types of acid- base disorders and also diagnosing the type of acid- base disorder from laboratory report and ABG data, calculating and using the osmolality and anion gap in determining the acid- base disorders, learning the importance and activity of about ٢٥ elements as well as the disorders and diseases of shortage or toxicity with them;

Description: introduction to the disorders of water and sodium, acid- base in patients and their diagnostic method, and ABG interpretation method, the importance of electrolytes and sodiumpotassium elements (totally ٢٥ elements) and disorders of their shortage in body;

Necessary Content:

1- Water Metabolism: introduction and classification of main and rare elements, definition of electrolytes, the role of elements in determining the plasma water and body total water, calculating the blood osmolality, regulating and keeping the water balance in body and plasma, water balance disorders, sodium balance disorders;
2- Regulating Blood pH: types of buffer, place of activity of types of buffer, role of different buffers in regulating the blood pH, types of acid- base disorders, compensation discussion;
3- ABGs: the ABG artery blood gases, acid- base disorders diagnosis in patients using the ABG results using the various examples, diagnosing the initial disorder and diagnosis of existence or absence of compensation and whether compensation is enough or not, calculating anion gap and delta gap, using the anion gap and delta gap in diagnosing the reasons and type of acid-base disorders, calculating the delta ratio, Davenport charts and their advantages in interpreting the ABG results;
4- Other Elements and Minerals: reminding the Mendel Table and main and rate elements, addressing the fact the little or large amount of each element causes the disease, the interactions of elements in body environment, potassium and factors engaging in keeping the balance, studying other ٢٢ elements briefly by expressing the shortage and toxicity diseases;

Medical Genetics

Code: ١٢٤

Presentation: Basic Sciences of Medicine, Clinical Preliminaries (According to

Curriculum Approved by University)

Prerequisite: Cellular- Molecular Biochemistry, Cell Physiology

Type of Course: Theoretical (٣٤ hours), Practical (- hours), Total (٣٤ hours)

Total Goals: expecting in this course to have a good understanding of principal subjects of medical genetics, and recognize them in natural inheritance processes, common diseases and congenital disorders by knowing the most principal common techniques of medical and molecular genetics;

1- Strategic position of medical genetics in health system;
2- Types of inheritances and their similarities and differences, and also ability to distinguish them;
3- Important common human diseases in each inheritance discussed in medical genetics;
4- Types of congenital disorders, teratogens and twins, and their relation with medical genetics; 5- Application of the most important methods discussed in pre and post- birth genetic diagnosis; 6- Epigenetics and human diseases;
7- Cytogenetic and molecular genetics in human and their strong methods in diagnosis of human diseases;
8- Cellular and molecular fundamentals and origins of genetic diseases in human;
9- Principles of genetic consultation and its strategic position in determining risk and determining the disease inheritance pattern;
10- Strong methods of genetic engineering in medicine;
11- Strong methods of gene therapy and its important methods;

12- Strong methods of cancer genetics and important methods of its diagnosis and treatment;

13- Position of pharmacogenetics and individual medicine requirement;

14- Important genetic approaches and methods in prevention, recognition and treatment of diseases;

Description: introduction to the cellular and molecular genetics, types of inheritance patterns, role and application of genetic consultation in diagnosis of disease, determining the congenital pattern and risk, introduction to the strong cellular especially molecular methods in diagnosis and prevention of important genetic diseases, gene therapy, cancer genetics, epigenetics and pharmacogenetics;
Necessary Content:

1- History, position, importance, applications of medical genetics and mission;

2- Clinical cytogenetic: necessary preliminaries, chromosome disorders methods;

3- Molecular genetics and gene mutations, importance and applications;

4- Function, gene expression, and its regulation;

5- Principles of genetic consultation, tree analysis and application in mono- gene diseases; 6-

Mono-gene inheritance patterns in human diseases (Mendel inheritance);

7- Mono-gene inheritance patterns in human diseases (Holandric inheritance);

8- Multi-factorial, cytoplasm and immunity inheritances;

9- Congenital disorders, teratogens and twins;

10- Genetic engineering and its applications in medicine;

11- The recent developments in pre- and post- birth molecular diagnosis;

12- Epigenetics and human diseases;

13- Gene therapy in human, the most principal common methods by introducing the important samples;

14- Application of viral and non-viral vectors in gene therapy;

15- Cancer genetics, common methods of gene therapy in cancer as well as the important samples;

16- Pharmacogenetics and medicine based on the individual specifications (individualized medicine);

Remarks: a training course of clinical genetics may be randomly designed and held in the centers with necessary qualifications by confirmation of genetic boards and general medicine. In this case, medical genetic consultation may be held in workshop form.
Genetics is omitted from the basic sciences general exam and included in preinternship general exam.

General Principles of Nutrition

Code: ١٢٥

Presentation: Basic Sciences, Clinical Preliminaries (According to Curriculum

Approved by University)

Prerequisite: Cellular- Molecular Biochemistry

Type of Course: Theoretical (٣٤ hours), Practical (- hours), Total (٣٤ hours)

Total Goals: at the end of course, students shall understand the principal concepts of nutrition:

1- Generalities of influence of nutrition on health;
2- Food groups of nutrients (macronutrients and micronutrients including vitamins, salts, food resources and signs of shortage and their poisoning);
3- Generalities of nutrition in different demographic groups; ٤- Regulating the nutritional advices in different people;

Description: introduction to the generalities of nutrition, nutritional specifications of energy and food groups, general principles of nutrition in pregnant and feeding mothers and old people to perform the nutritional evaluation;

Necessary Content:

1- Generalities of nutrition and health and nutritional advices; 2-
Food groups;
3- Carbohydrates (sweeting of sugars, food fibers, nutritional importance of types of carbohydrates and needing the carbohydrates);
4- Fats (nutritional importance of types of fats and needing fats);
5- Proteins (complete and incomplete proteins, quality of proteins, balance of nitrogen and needing the proteins);
6- Energy;
7- Fat soluble vitamins (food resources, shortage and poisoning); 8-
Water soluble vitamins (food resources, shortage);
9- Minerals and water (food resources, shortage);
10- Obesity and general malnutrition (diseases of malnutrition); 11-
Nutrition in pregnant and feeding mothers;
12- Nutrition in children;
13- Old people nutrition;
14- Evaluating the nutrition status;
15- Principles of regulating diet;

Remarks: this course may be presented in the basic science period, or clinical preliminaries.

Questions of this course are omitted from the basic sciences general exam and included in preinternship general exam.

Biophysics

Code: ١٢٦

Presentation: Basic Sciences, Clinical Preliminaries (According to Curriculum Approved by University)
Prerequisite: -

Type of Course: Theoretical (٣٠ hours), Practical (٨ hours), Total (٣٨ hours)

Total Goals:

1- Introduction to the physical fundamentals and bases of imaging methods and measuring the anatomic and physiological changes into the human body;
2- Introduction to the selection of common diagnostic imaging methods in patients;
3- Introduction to the analysis and interpretation of changes of diseases using the diagnostic equipment;

Description: introduction to the physics and generalities of diagnostic methods and related equipment to select some algorithms in the next steps of education and understand the application of diagnostic methods especially the imaging for patients, and diagnose the difference of noise and visual errors from disease and pathological changes after receiving the results and images of patients;

Necessary Content:

1- Optical Physics:
- Importance and properties of visible light, infrared ray, ultraviolet ray and their medical consumptions;
- Physical study of eye, diagnosis and correction of global disorders;
- Fundamentals of astigmatism physics and its correction methods;
- Physical fundamentals of specifications of retina, sight field, perspicuity, seeing the colors, ophthalmoscopy;
- Physical fundamentals of seeing by two eyes, hyperopia, understanding the objects magnificence;
- Physical fundamentals of common lens equipment used in medicine; - Practical program;

2-Ultrasound waves and its medical consumptions:
- Production and properties of ultrasound waves;
- Chemical and biological properties of ultrasound waves;
- Application of ultrasound waves in medicine;
- Physical fundamentals of common ultrasound equipment in medicine; - Practical program;

3- Consumptions of frequency currents in medicine:
- Production and properties of high frequency currents;
- Physiological properties and applications of high frequency currents in medicine (electrical operation and heat therapy);
- Side effects of electricity on body and prevention ways;
- Fundamentals of magnetic resonance imaging (MRI), image formation mechanism;
- Different contrasts in MRI;
- Diagnostic applications of MRI;
- Physical fundamentals of common equipment of high frequency currents used in medicine; ٤- Nuclear medicine:
- Structure of atom and core energy;
- Radioactivity and its properties (ionizing rays);
- Natural radioactivity;

- Neutrons, artificial radioactivity;
- Radioactivity diagnosis and measurement;
- Marked molecules and its medical applications;
- Applications of radioisotopes in diagnosis and treatment;
- Practical program;

5- Physical fundamentals of radiology and radiotherapy:

- Nature and properties of X ray in diagnosis and treatment;
- X ray generators;
- X ray absorption and measurement;
- Radiobiology;
- Protection and principles of X and Gamma rays dosimetry; - Practical program;

6-Robotic applications in medicine;

Remarks: this course may be presented in the basic science period, or clinical preliminaries. Questions of this course are omitted from the basic sciences general exam and included in preinternship general exam.

Courses of Microbiology and Parasitology

Medical Bacteriology

Medical Parasitology

Medical Mycology

Medical Virology

Medical Bacteriology

Code : ١٢٧

Presentation: Basic Sciences

Prerequisite: -

Type of Course: Theoretical (٤١ hours), Practical (٢٠ hours), Total (٦١ hours)

Total Goals:

Cognitive Goals: expecting at the end of the course to achieve the following skills:

1- Recognizing the position of microbes in nature, their nomenclature and classifications, difference of prokaryote and eukaryote cells;
2- Introduction to the anatomical, biochemical structure, metabolic specifications, growth physiology and genetic exchanges among microorganisms;
3- Recognizing the effect and influence of types of antimicrobial matters (antibiotics, etc.), chemicals and physical agents on microorganisms and mechanisms of pharmaceutical resistance of pathogenic bacteria;
4- Understanding the concepts of natural micro florae of human body, hospital infections, disease mechanisms by microbes, transferring infection and pathogens stability in body;
5- Introduction to the classification of families and different types of bacteria causing disease in human;
6- Recognizing the most important pathogenic indices and infection mechanisms by bacteria;
7-Recognizing the selection of sample, sampling time and sending sample to the laboratory for diagnosing the pathogenic bacteria;
8- Recognizing the contamination cases in results of examinations;

Skill Goals: expecting the students at the end of course to do the following items:

1- Preparing smear of samples prepared from pharynx, lesions, urine and mucus, and staining them in hot method;
2- Culturing the clinical samples prepared from lesions, urine, stool and mucus;
3- Performing the antibiogram test by selecting the suitable antibiotics and interpreting its results;

Description: introduction to the general concepts of bacteria and their classification especially important human pathogenic bacteria and learning the different aspects of infectious bacterial diseases in an applied form accordingly.
Introduction to the pathogenicity ways, their contagion method and the control, prevention and eradication of bacterial diseases by acquiring information of useful and useless effects of microorganisms on the human life, familiarity with types of pathogenic bacteria, classification, structure, physiology of growth, metabolism, biochemical, genetics, antigenic and molecular specifications;

Necessary Content : in tables of theoretical topics of bacteriology, and necessary content of practical activities of Bacteriology Lab.;

Theoretical Topics of Bacteriology:

1- Classification of microorganisms, anatomical and chemical structure of bacteria; 2-
Growth physiology and microorganisms metabolism;
3- Microorganisms genetics;
4- Antibiotics (function mechanism and classification);
5- Resistance mechanisms to antibiotics;
6- The effect of chemical and physical factors on microorganisms;
7- Micro biome, normal fluorine and probiotics, relation of parasite and host;
8- Mechanisms of disease by bacteria, types of infection (hospital and out of hospital);

9- Positive gram coccus;
10- Negative gram coccus;
11- Corynebacterium, listeria, lactobacillus, actinomycetes, and Nocardians;
12- Enterobacteriaceae (Escherichia, Proteus, enterobacter, Klebsiella, and Sarasia);
13- Enterobacteriaceae (Salmonella, Shigella, and Yersinia);
14-Mycobacterium tuberculosis, mycobacterium lapara and other mycobacteriums;
15- Pseudomonas, Acinetobacter and other non-fermenters;
16- Vibrionacea, campylobacter and helicobacter;
17- Bacillus (Bacillus Anthraise), and negative anaerobic gram Bacillus (bacteroides);
18- Clostridium tetani and clostridium botulinum, clostridium perfringens and clostridium diphyles;
19- Brucella, homophiles, chlamydia and mycoplasma;
20- Triponama, borelia, leptospira, bordtella and legionella; ٢١-
Necessary Content of Practical Activities of Bacteriology Lab.:

1- Safety items in laboratory;
2- Clinical sampling methods;
3- Preparing smear and gram staining and Giemsa and Wright;
4- Culture of selected positive gram coccus and negative gram bacillus; 5-
Observing the smears stained for common diseases;
6- Laboratory diagnosis of common bacteria and interpreting the examinations; 7-
Interpreting the antibiogram samples;

Medical Parasitology

Code: ١٢٨

Presentation: Basic Sciences

Prerequisite: -

Type of Course: Theoretical (٢٨ hours), Practical (١٢ hours), Total (٤٠ hours)

Total Goals: introduction to the parasitic agents causing diseases and the important pathogenic parasites according to the protozoa and helminth groups, morphology, life cycles, transfer ways, reservoirs, hosts, the role of arthropods as the biological and mechanical vectors in their transfer, pathogenicity and specialized clinical signs, introduction to the geographical distribution of each parasitic infection, status of their appearance and outbreak especially in different districts of Iran, and also the methods of prevention and control of parasitic diseases;

Description: introduction to the etiological factors, life cycle, transfer way, pathogenicity, sampling methods, requesting for type of examination and laboratory diagnosis, parasitic diseases prevention and control methods (by mentioning their clinical items);

Necessary Content:

1- Generalities of parasitology;
2- Generalities of medical helminthology;
3- Hepatic trematodes;
4- Pulmonary trematodes;
5- Intestinal trematodes;
6- Blood trematodes;
7- Intestinal cestoda;
8- Larva cestoda disease;
9- Nematodes;
10- Blood- tissue nematodes;
11- Generalities of protozoology;
12- Blood- tissue protozoal diseases agents;
13- Sexual- intestinal protozoal diseases agents;
14- Common parasites including toxoplasma, Leishmania, malaria, opportunist protozoa, hedatic cyst;
15- Interpreting the serological tests of parasitic diseases;
16- Principles of sampling for parasites;
17- Generalities of arthropods;
18- Arthropods control methods;

Practical Parasitology:

1- Observing smear ready for common parasites and their egg under microscope as case presentation;
2- Sampling methods and preparing smear of parasites and their microscopic analysis;
3- Interpreting the serological tests of parasitic diseases (case presentation and real tests);

Medical Mycology

Code: ۱۲۹

Presentation: Basic Sciences

Prerequisite: -

Type of Course: Theoretical (۱۵ hours), Practical (٤ hours), Total (۱۹ hours)

Total Goals: introduction to the important pathogenic fungi, recognizing the mycotic factors causing diseases, introduction to the geographical distribution of each mycotic infection and status of their appearance and outbreak especially in different districts of Iran, diagnosing the diseases of important fungi using the slide, and explaining the prevention and control methods of each mycotic disease;

Description: introduction to the etiological factors of mycotic diseases, their transfer way, pathogenicity, and their pre-notice, laboratory diagnosis and requesting for type of examination and also introduction to the principles of treatment using the common effective drugs in country and also introduction to the prevention and control methods of such diseases;

Necessary Content:

1- Generalities of mycology;
2- Agents of surface mycotic diseases;
3- Agents of cutaneous mycotic diseases;
4- Agents of subcutaneous mycotic diseases;
5- Agents of systematic mycotic diseases including the mycotic infections in immunity deficiency patients;
6- Food molds, candida albicans, Aspergillus, mucor mycosis, tinea and other common cases; 7- Morphological and biological specifications of mycotic agents;
8- Life cycle of mycotic agents, biological and environmental factors and other effective personal behaviors on setting their evolution;
9- Main reserves, final host and intermediate of each parasite and the biological role of vectors in development and evolution of mycotic agents;
10- Epidemiological specifications, geographical distribution and clinical and pathological signs of mycotic diseases;
11- Types of laboratory diagnosis methods of mycotic infections;
12- Principles of mycotic diseases treatment and their sensitivity to the common drugs;
13- Pathogenic mycotic agents prevention and control methods;

Practical Topics:

- Observing pre-prepared smear of common fungi under microscope as clinical case presentation;
- Sampling, preparing smear in KOH method and microscopic analysis and diagnosis of sample for fungi;

Medical Virology

Code: ۱۳۰

Presentation: Basic Sciences

Prerequisite: -

Type of Course: Theoretical (۱۷ hours), Practical (- hours), Total (۱۷ hours)

Total Goals:

1- Introduction to generalities of medical virology;
2- Introduction to the structure, specifications, characteristics and replication of pathogenic viruses in terms of clinical phenomena (signs, pathology, appearance and epidemiology), and viral infections in human;
3- Introduction to the methods of diagnosis and application of virology methods in recognizing the clinical and epidemiological phenomena of viral infections;

Description: introduction to the generalities of medical virology, specifications of pathogenic viruses, methods of diagnosis and epidemiology of viral infections in Iran;

Necessary Content :

١- Generalities of Virology:

-Definition and history;
-Structure and molecular biology of viruses;
-Properties of viruses;
-Replication of viruses;
-Relation of viruses and host cell;
-Laboratory methods of diagnosing the viral diseases;
-Bacteriophages; ٢- Systematic Virology:
-Classification of viruses;
-Specifications and pathogenic role of DNA viruses in diseases;
-Specifications and pathogenic role of RNA viruses in diseases;
-Common pathogenic viruses in body system;
-Role of viruses in carcinogenesis;
-General mechanisms of effect of drugs on viruses;

Medical Immunology

Code: ١٣١

Presentation: Basic Sciences, Clinical Preliminaries

Prerequisite: -

Type of Course: Theoretical (٣٠ hours), Practical (٨ hours), Total (٣٨ hours)

Total Goals:

Cognitive Goals: at the end of this course, students will get familiar with the fundamentals of immunology, organs, molecules and cells engaging in the immunity system, and understand the different mechanisms of immunity system in confronting the foreign agents. They will also learn the immunity response in different diseases including the infectious diseases, cancer, self-immunity, and connection, and understand the immunity mechanisms in recognizing and diagnosing types of diseases.

Skill Goals: introduction to performing the immunity and serology diagnostic methods and their application in diagnosing types of diseases, analysis of immunity and serology tests (in terms of being positive and negative) and performing types of immunity and serology tests including the agglutination, precipitation, hemolysis, etc.;

Description: introduction to the basic fundamentals of immunology, cells and molecules engaging in immunity system, the role of immunity system in different diseases and function of different elements of immunity system (inherent and acquisitive immunity), recognizing types of effective immunity cells including the inherent and specialized immunity cells, introduction to the T and B lymphocytes, and their response to antigen, introduction to tolerance and its role in self-immune diseases, introduction to the immunity response to pathogens, function of immunity system in implant, immunity response in cancer, immunity response in hypersensitivity and allergic reactions, using the molecules, antibodies and immunity cells in diagnosing and treatment of types of diseases;

Practical part of this course is designed for introduction to the common serology diagnostic methods for diagnosis of infectious diseases (parasitic, bacterial, viral and mycotic), blood groups, autoimmune diseases, cancer. In this course, students will perform the simple laboratory serological methods in laboratory, and observe the interpretation of results of examinations, and get familiar with the more specialized tests and their application in diagnosis of diseases in written form.
Necessary Content:

In the table of theoretical topics of medical immunology;

Notes: questions of this course are omitted from basic sciences general exam and included in preinternship general exam.

Theoretical Topics of Medical Immunology:

1- Generalities of immunity system: history, generalities of inherent and specialized immunity, generalities of humoral and cellular immunity, types of immunization and immunity;
2- Cells and tissues of immunity system, mucous and skin immunology: cells, an address to the lymphocytes, monocytes and golonolocytes, tissues: central and peripheral lymphatic organs, introduction to anatoxic and cellular structure of mucous systems, introduction to the structured and dispersed mucous lymphatic organs, the role of IgA, mother milk immunity;
3- Introduction to the antigens and their specifications: immunogen, hopten, tolergen, allergen, superantigen and mitogen, antigens dependent on thymus and independent from thymus;
4- Introduction to antibodies and their types: structure of antibody, types of immunoglobulins, functions of immunoglobulins;
5- Inherent immunity and inflation: recognition method in inherent immunity, cellular receptors and inherent immunity floating, inherent immunity cells, inherent immunity molecules, chronic and serious inflation process;
6- Complement system and its role in defending the body: complement activation ways, complement functions, preventive receptors;
7- Introduction to MHC and immunogenetic equipment: MHC genetic principle and its digestion, structure of MHC molecules, maintenance method, their role in immunity system;
8-Phagocytosis process and antigen supply to T cells: phagocytosis, respiratory explosion, antigen processing and supply process in endocytic and cytosodisk routes;
9- Humoral immunity mechanisms: abstract of evolution of B lymphocytes, B lymphocytes activation method, the role of T lymphocytes in humoral immunity, antigen omission process in humoral response;
10- Cellular immunity mechanisms: abstract of evolution of T lymphocytes, T lymphocytes activation method, different patterns of cellular immunity response, antigen omission process in cellular response;
11- Tolerance and self- immunity mechanisms: types of action (central and peripheral), central tolerance in B and T cells, peripheral tolerance in B and T cells, tolerance fracture mechanisms by wade and self-immunity; ١٢- Cytokines;

Practical Topics of Medical Immunology:

1- An introduction to the serology methods and antigen and antibody reactions;
2- Performing C-Reactive Protein (CRP) test and information of applications and interpretation; 3- Performing Rheumatoid Arthritis Latex (RA-Latex), introduction to applications and interpretation, and also its false negative and positive items;

4- Performing Vidal, Wright test and information of applications and interpretation, introduction to its false negative and positive items;

5- Performing the ABO system direct and indirect grouping test and introduction to their application, performing Rh-du test and information of its application in blood transfusion;

6- Demonstration of direct and indirect Coombs tests and introduction to their application;

7- Performing cross match tests (blood group compatibility) and introduction to its interpretation and application, observing the factors necessary in blood transfusion;

8- Anti- CCP for arthritis rheumatoid;

9- RPR for syphilis;

Diagnostic tests of different diseases are explained and practically performed according to active and passive agglutination, latex agglutination- Elisa flocculation.

Clinical Immunology

Code: ۱۳۲

Presentation: Clinical Preliminaries

Prerequisite: Medical Immunology

Type of Course: Theoretical (۱ credit, ۱۷ hours), Practical (- hours), Total (۱ credit, ۱۷ hours)

Total Goals:

1- Introduction to the fundamentals of applied immunology;

2- Introduction to the importance and applications of immunology in treatment of types of diseases;

3- Introduction to the immunity molecules and cells presently used as diagnosis and treatment of different diseases;

Description: introduction to the importance and application of immunology, the role of immunity system in different diseases, introduction to the immunopathogenesis of self-immune diseases and infectious diseases, immunopathogenesis of organs implantation, immunopathogenesis of cancer and application of immunological factors in its treatment, immunopathogenesis of allergic and hypersensitivity diseases, using molecules, antibodies and immunity cells in diagnosis and treatment of types of diseases;

Necessary Content:

1- Vaccination and immunization;

2- Fast allergic and hypersensitivity diseases, hypersensitivity type II, III, IV; 3- Immunohematology;

4- Self-immunity diseases;

5- Cancer and types of common immunotherapies;

6- Immunity responses against bacteria, viruses, parasites and fungi;

Remarks:

Non-core subjects of immunology:

- Nutrition and sport immunology;
- Psychoneuroimmunology;
- Aging immunology;
- Immunotherapy and its types;
- Implant immunology;
- Pregnancy immunology;

These topics are presented in General Doctorate Degree in Medicine as Advanced Applied Immunology for ٩ hours (٠,٥ credits).

Courses of Community Medicine and Health Sciences

Principles of Health Services

Principles of Epidemiology

Biostatistics

Research Methodology and Evidence-Based Medicine

Common Non-Contagious Diseases Epidemiology in Country

Common Contagious Diseases Epidemiology in Country Principles of Demography and Family Health

Principles of Health Services

Code: ۱۳۳

Presentation: Basic Sciences of Medicine

Prerequisite: -

Type of Course: Theoretical (۲۶ hours), Practical (- hours), Total (۲۶ hours)

Total Goals: introduction to the generalities and history of health in Iran and world, and types of health systems in the world, understanding the concepts of health and disease, and recognizing the threatening dangers of health and development of health in the world and Iran, introduction to the concept of health for all people and prevention levels, using the initial health cares, managing and evaluating the patients according to the prevention levels, introduction to the role of national and transnational organizations in the health development, and also the initial concepts of health education and health promotion, connecting the health relationship, training the patients in the field of health services, introduction to the goals of sustainable development, and recognizing the role of effective social factors on health to use them in patient management, introduction to the importance of environmental health, and professional health, and recognizing their role in population health promotion, introduction to the health of foodstuff and role of nutrition in health and using their principle in the related fields, understanding the importance of oral and dental health, introduction to the valuation of health technology, recognizing the immunization program and conducting its execution;

Description: introduction to the initial and infrastructural principles of health to protect and promote the individual and population health as a physician;

Necessary Content:

1- Generalities and history of public health in Iran and world, development including millennium development, HFA, universal health coverage (UHC), primary healthcare (PHC) and goals (MDGs);

2- Concepts of health and disease and prevention levels; 3-

Primary healthcare system I (PHC);

4- Primary healthcare system II (PHC);

5- Health structure in world and Iran based on the indices;

6- Local, national and transnational organizations related to the health;

7- Environmental factors related to the health (air, water, solid wastes and wastewater, foodstuffs);

8- Social factors related to the health;

9- Workplace health and safety;

10- Principles and generalities of immunization;

11- Principles of health services management;

12- Health education and promotion;

13- Health services salary receivers; ۱٤-

Remarks: social factors determining the health and goals of sustainable development of annual report of world health organization;

Principles of Epidemiology

Code: ١٣٤

Presentation: Basic Sciences of Medicine

Prerequisite: -

Type of Course: Theoretical (٣٤ hours), Practical (- hours), Total (٣٤ hours)

Total Goals: expecting to meet the following goals:

1- Introduction to the definition, applications, history and concepts of epidemiology;
2- Understanding and using the diseases transfer, epidemic diagnosis and its control method;
3- Understanding the concepts of disease appearance, health and disease sizes and healthcare system;
4- Calculating and interpreting the disease sizes;
5- Understanding the concept of natural history and disease pre-notice;
6- Recognizing and using the classification of types of studies in researches of medical sciences; 7- Understanding and using the danger measurement method;
8- Understanding the difference of relation and cause and Hill principles; 9- Recognizing the diagnostic tests validity measures;
10- Calculating the tests validity and reliability indices and relation between them and principles of disease screening;

Description: introduction to the initial and infrastructural principles of epidemiology to work as a physician by recognizing the epidemiologic appearance of diseases, indices and related rates in keeping and promoting the individual and population health;

Necessary Content :

1- Introduction, history and application of epidemiology;
2- Diseases transfer method, epidemiology and its control;
3- Occurrence of diseases: occurrence care and sizes;
4- Disease occurrence: measures of death and other health sizes; 5- Natural history of disease and pre-notice;
6- Principles of ecological and sectional studies; 7- Principles of case- evident and cohort studies; 8- Danger estimation;
9- Principles of interventional studies;
10- Evaluating the diagnostic tests;
11- Principles and application of screening;
12- Statistical and cause relation;

Biostatistics

Code: ۱۳۵

Presentation: Basic Sciences of Medicine

Prerequisite: Principles of Epidemiology

Type of Course: Theoretical (۱۷ hours), Practical (- hours), Total (۱۷ hours)

Total Goals: understanding the fundamentals of statistics, recognizing the common terminology and concepts, understanding the considerations related to the statistical inferences, not performing the calculation details and dominance on statistical techniques except the items required for meeting the said goal;

Description: introduction to the initial and infrastructural principles of biostatistics to work as a physician by performing types of study and judgment in studies performed in finding the approaches for keeping and promoting the individual and population health;

Necessary Content:

- Explaining data, central and dispersion indices;
- Probability, its types and application in medicine;
- Normal distribution and its application in medical sciences;
- Binominal and Poisson distributions;
- Point and distance estimation (reliability limit);
- Hypothesis test and application of statistical software in it;
- Independent T and couple T tests and application of statistical software in it;
- Chai ۲ and correlation test and application of statistical software in it;

Research Methodology and Evidence-Based Medicine

Code: ۱۳۶

Presentation: Clinical Preliminaries/ Clerkship

Prerequisite: Principles of Epidemiology, Biostatistics

Type of Course: Theoretical (۷ hours), Practical (۱۹ hours), Total (۲۶ hours)

Total Goals: explaining the framework of a research proposal, preparing a research proposal with all steps, searching the health electronic references, describing the framework and total writing method of a scientific paper; describing the importance and position of evidence- based medicine, changing the clinical questions and other health questions to a searchable and formulated question, searching the evidence based on the formulated question, analyzing and criticizing some medical papers in statistics and research method, knowing the principles of ethics in research and using them in research;

Description: learning the research performance method, searching the papers and evidence- based medical methods including the evidence criticism;

Necessary Content:

1- Selecting the sample and expressing the research problem; 2-
Electronic search of medical references I;
3- Goals, questions, hypothesis and types of variables; 4-
Population, sample and sampling methods;
5- Quality analysis methods;
6- Selecting the type of study;
7- Data presentation and collection method;
8- Ethics in research;
9- Research management;
10- Scientific method of essay writing and results distribution (optional);
11- Evidence- based medical principles;
12- Forming a searchable question;
13- Electronic search of medical references II;
14- Applied principles of criticism of papers and their application in medicine;

Common Contagious Diseases Epidemiology in Country

Code: ۱۳۷

Presentation: Clinical Preliminaries/ Clerkship

Prerequisite: Principles of Epidemiology

Type of Course: Theoretical (۱۷ hours), Practical (- hours), Total (۱۷ hours)

Total Goals: expecting at this course to explain the epidemiology of contagious diseases in Iran in terms of geographical and locational distribution, personal specifications, danger factors, prevention and control methods, and using them in clinical section for determining the best method of prevention and estimation of prenotice;

Description: introduction to the epidemiology of common contagious diseases in the country in order to act as a physician in protecting and promoting the individual and population health;

Necessary Content:

1- An introduction to the epidemiology of contagious diseases, principles of diseases care and care system;
2- Diseases transferred by sexual tract;
3- Immunity system acquisitive deficiency syndrome (AIDS); 4-
Hepatitis;
5- Diseases preventable by vaccine;
6- Flu and newly and re-appeared diseases;
7- Gastrointestinal infections (salmonella, Shigella, giardiasis, amibiasis, toxoplasmosis and cholera;

8- Tuberculosis, leprosy;

9- Epidemiology of zoonosis;

10- Reserve diseases (malaria and lischmania);

11- Hospital infections and microbial resistance; ١٢-

Remarks: it is advised to present this course concurrent or near to the time of clerkship of infectious diseases.

Common Non-Contagious Diseases Epidemiology in Country

Code: ١٣٨

Presentation: Clinical Preliminaries/ Clerkship

Prerequisite: Principles of Epidemiology

Type of Course: Theoretical (١٧ hours), Practical (- hours), Total (١٧ hours)

Total Goals: expecting at this course to explain the epidemiology of non-contagious diseases in Iran in terms of geographical and locational distribution, personal specifications, danger factors, prevention and control methods, and using them in clinical section for determining the best method of prevention and estimation of prenotice;

Description: introduction to the epidemiology of common non-contagious diseases in the country in order to act as a physician in protecting and promoting the individual and population health;

Necessary Content:

1- An introduction to the epidemiology of non-contagious diseases, principles of care of diseases and care system;

2- Epidemiology of arthrosclerosis and blood hypertension; 3-

Epidemiology of diabetics, obesity and hyperlipidemia; 4-

Epidemiology of accidents and events;

5- Epidemiology of malign diseases (breast, lung, gastric, prostate, esophagus, colon and skin cancer);

6- Epidemiology of psychological diseases (depression, anxiety, murder, home anxiety, etc.) and addiction;

7- Epidemiology of iron deficiency anemia, and thyroid diseases;

Principles of Demography and Family Health

Code: ١٣٩

Presentation: Clerkship

Prerequisite: Principles of Health Services

Type of Course: Theoretical (٣٤ hours), Practical (- hours), Total (٣٤ hours)

Total Goals: expecting at this course to describe the demographic developments and indices of Iran and world, and concepts of sustainable development and demographic policies, principles of family health and fertility, and also care programs of this field, nationwide program of healthy child, and health programs of schools, juveniles and young people, mid-age and old-age people, understand the importance of mental health and explain its programs;

Description: introduction to the initial principles of demography and family health in order to act as a physician in protecting and promoting the individual, family and population health;

Necessary Content:

1- Population, sustainable development and demographic policies; 2-
Generalities and principles of family health;
3- Generalities of the fertility health and demographic indices; 4-
Pre-pregnancy health and consultations;
5- During pregnancy and childbirth and after childbirth cares; 6-
Distance of births and its methods;
7- Healthy and vulnerable infant;
8- Promoting the mother milk feeding;
9- Physical growth of child before birth to the end of maturity (evaluation indices and methods);
10- The whole evolution of early childhood and screening the evolutional disorders;
11- National healthy child program I, health care and immunization;
12- National healthy child program I, health promotion;
13- Students and schools health;
14-Juveniles and young people health;
15-Mid-age people (men and women) health;
16- Old people health;
17-Mental health;
18- Violation and social damages (it may involve any age group);

Remarks: social factors determining health and goals of sustainable development from annual report of WHO.
It is advised to present this course concurrent to the medical clerkship as theoretical part of community/ family medicine.

Health Psychology

Code: ١٤٠

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: -

Type of Course: Theoretical (٣٤ hours), Practical (- hours), Total (٣٤ hours)

Total Goals:

1- Knowing the different fields of psychology;

2- Introduction to specifications of general psychology of humans including intelligence, personality, memory, recognition of emotions and learning, and defining their relation with promotion of physical and mental health;
3- Achieving a general understanding of role of psychology in promotion of health for improving the life quality and prevention of physical and mental disorders;

Description: using the concepts of this course, reaching an extensive image of interrelation of body and soul, and regarding the role of psychological factors in prevention of appearance and facilitation of treatment in the clinical activity;

Necessary Content :

1- Psychology, medicine and health;
2- Brain, recognition, emotion and behavior;
3- Mental growth;
4- Health and behavior;
5- Motivation, emotion and health;
6- Memory, memory and health;
7- Stress, immunology and health;
8- Mental disorders;
9- Rehabilitation and psychological interventions;
10- Personality and health;
11- Addiction: pathology and side effects;
12-Murder: etiology and side effects;
13- Intelligence;
14- Psychometrics;

Remarks: by focusing on the health dimensions including the physical, psychological, social and spiritual health and self/ psychology of self;

Introduction to the application of psychometric tests in medicine including the tests of:

- General Health Questionnaire (GHQ);
- Minnesota- Multiphasic- Personality- Inventory (MMPI);
- Mindful Cognitive Movement Therapy (MCMT I);

Courses of Medical Ethics

Medical Ethics I

Medical Ethics II

Medical Ethics III

Medical Ethics IV

Medical Ethics I

Code: ١٤١

Presentation: Basic Sciences

Prerequisite: -

Type of Course: Theoretical (- hours), Practical (١٧ hours), Total (١٧ hours)

Total Goals:

Cognitive Goals:

- Introduction to the collection of expected capabilities of graduates of general medicine;
- Introduction to the concepts of ethics and principles of professional behavior in medicine;
- Introduction to the basic principles of learning medicine and effective planning for practice;
- Introduction to the basic knowledge of interpersonal communicative skills for connecting the effective relation with professors, personnel, family and friends; Viewpoint Goals:
- Undertaking and obliging to acquire expected capabilities during the studies;
- Considering the special professional position and existence of moral sensitivities in medicine;
- Performing regularly and immediately all educational affairs including the assignments and duties assigned;

- Using the study skills and time management (including the time management, learning and study style management) in arranging the educational activities; Skill Goals:
- Observing the principles of professional behavior in their function, and having the behavior and appearance appropriate to the dignity of student of medicine;
- Connecting a good relationship with professors, educational and administrative officers;
- Having effective and honest expression in interpersonal relations;
- Connecting good verbal and eye relation;
- Listening actively;
- Presenting effective planning for learning using the principles of time management and study skills;
-

Description: this course is a part of long theme of professional ethics in curriculum of general medicine, organized and presented in the form of a semester.
Organized in the form of ۰٫۵ practical workshop credit (۱۷ hours), this course describes the key ethics and skills a physician shall have in medicine, begins with introducing the capabilities of general medicine and describing its importance during the study, and continues by presenting generalities related to the introductory skills of effective professional, communicative and learning behavior learnt by a student of medicine at the beginning of entering medicine. At the end of the course, the students are expected to get familiar with these principles and acquire the sufficient knowledge and skill for using them.
This course may be presented in the form of several workshops during the academic semester. To ensure the efficiency of course, the university is required to consider good process and means for evaluation of using the workshop teachings by students.

Necessary Content:

- Introduction to the capabilities expected from general practitioner;
- Principles of professional behavior in medicine I: explaining the importance of role of student as physician during studying and reviewing the principles of professional behavior in medicine;
- Interpersonal communicative skills I: communicative elements and communication obstacles, principles of connecting effective relationship (active listening and self- appearance techniques), using the body language (application of non-verbal techniques in communications);

- Basic principles of learning medicine: studying skills and time management skills; Remarks: this course is a part of long theme of professional ethics in curriculum of general medicine. Therefore, the result of evaluation is reported in qualitative form (with four grades of more than expectation, in an acceptable form, acceptable by mentioning the further effort in the next courses of medical ethics, and nonacceptable). The first three levels mean passing, and the last failing, which requires taking the course again.

This course is not included in general exam.

The syllabuses presented in this course are on recommendation basis, and curricular planning committee of the university can change them up to ٤٠٪ if required.

Medical Ethics II

Code: ۱٤۲

Presentation: Basic Sciences

Prerequisite: -

Type of Course: Theoretical (- hours), Practical (۱۷ hours), Total (۱۷ hours)

Total Goals:

Cognitive Goals:

-

-
-

Introduction to the general principles of team work, conflicts solution and sympathy techniques;
Explaining the performance of rethinking and its function in experience analysis; Introduction to the general principles of scientific thinking, and distinguishing the thinking standards from each other;
Viewpoint Goals:

- Showing enthusiasm to performance of activities and team work;
- Showing critical and reasonable behavior in confronting the critics of group members;
- Paying attention to the confrontation of issues, thinking and rethinking the experiences taken and effort for promotion of function;
- Obliging the self- learning and updating the knowledge and skills;
- Observing the principles of effective targeting and planning (including the time management, learning and study process management) in arranging the educational activities;

-

Skill Goals:

- Performing team work and having effective cooperation with other students as a member of team;
- Using rethinking methods in experiences of personal and professional life;
- Finding solution for interpersonal conflicts;
- Criticizing the subjects presented and related thinking elements based on the thinking standards;
- Recognizing their educational needs and offering good program for improving the learning by evaluating and analyzing their function;

Description: organized in the form of ۰٫۵ practical workshop credit (۱۷ hours) including "team work workshop" and "experiences analysis and rethinking workshop", this course describes the key ethics and skills a physician shall enjoy in medicine, begins with introducing the general principles of team work and conflicts settlement techniques and method of using the sympathy skill with others compared to the sympathy, and continues by presenting the generalities related to the introductory skills of personal growth including the performance of an effective rethinking and recognition and control of stress. According to the necessity of promotion of practical thinking of students in studying and learning medicine, the thinking elements and standards are introduced, and types of thinking and reasoning types are generally reviewed. At the end of the course, students are expected to get familiar with such principles, and obtain the sufficient knowledge and skills for using them;

Necessary Content:

- Interpersonal communication skills II: team work principles, conflicts solution techniques;
  Basic principles of personal growth I: self- learning management by planning, rethinking and thinking experiences skill;
  Basic skills of scientific thinking I: thinking elements, types of thinking parameters; Thinking standards;

Remarks: this course is a part of long theme of professional ethics in curriculum of general medicine. Therefore, the result of evaluation is reported in qualitative form (with four grades of more than expectation, in an acceptable form, acceptable by mentioning the further effort in the next courses of medical ethics, and nonacceptable). The first three levels mean passing, and the last failing, which requires taking the course again.

-

-

This course is not included in general exam.

The syllabuses presented in this course are on recommendation basis, and curricular planning committee of the university can change them up to ٤٠٪ if required.

Medical Ethics III

Code: ١٤٣

Presentation: Basic Sciences

Prerequisite: -

Type of Course: Theoretical (- hours), Practical (١٧ hours), Total (١٧ hours)

Total Goals:

Cognitive Goals:

- Introduction to the regulations and conditions governing the clinical environment;
- Introduction to the function of treatment team members and their role in interoccupation cooperation;
- Introduction to the professional position of a physician in the society and health system, and describing the structure, hierarchy and duties of each element of state health and treatment network;
- Explaining the reasoning errors and cognitive errors;
- Distinguishing the general principles of sympathy and compassion; - Introduction to the professional ethics charter in clinical section; Viewpoint Goals:
- Observing the medical honesty and dignity in virtual environment;
- Paying attention to recognition and control of mind cognitive mistakes and errors;
- Considering the connection of communication and sympathy to the friends and family, patients and their family; Skill Goals:
- Observing the principles of professional behavior in good function and confronting the virtual environment;

  Having behavior and appearance appropriate with medical dignity in university and clinical environments (early confrontation);
  Enjoying capability of using the sympathy skill;

  Having reasonable inference and discourse by regarding the inferential errors and cognitive errors;

Description: organized in the form of ٠,٥ practical workshop credit (١٧ hours) including "cognitive and medical errors workshop" and "early clinical confrontation workshop", this course describes the key ethics and skills a physician shall enjoy in medicine, and also provides the opportunity of getting familiar with clinical environment in the form of early confrontation program, and introduces the role and function of members of medical team in inter-occupation cooperation. The structure of health

-

-
-
system and role of physician therein are explained and introduced in this course. According to the requirement of distinguishing the relation of sympathy and compassion, this course is expected to provide the opportunity of familiarity and practice of sympathy skill. Finally, the most common cognitive and inferential errors are generally reviewed for the purpose promoting the correct inferential skills. At the end of the course, students are expected to get familiar with such principles, and obtain the sufficient knowledge and skills for using them;

Necessary Content :

- Introduction to the clinical environment (early clinical confrontation I);
- Introduction to the role of members of medical team and principles of interoccupation cooperation;
- Introduction to the role of medicine in the society and health system;
- Basic skills of scientific thinking II: recognizing and controlling the cognitive and inferential errors;
- Interpersonal communication skills III: sympathy;
- Principles of professional behavior in medicine II: principles of professional ethics in virtual environment;

Remarks: this course is a part of long theme of professional ethics in curriculum of general medicine. Therefore, the result of evaluation is reported in qualitative form (with four grades of more than expectation, in an acceptable form, acceptable by mentioning the further effort in the next courses of medical ethics, and nonacceptable). The first three levels mean passing, and the last failing, which requires taking the course again.
This course is not included in general exam.

The syllabuses presented in this course are on recommendation basis, and curricular planning committee of the university can change them up to ٤٠٪ if required.

Medical Ethics IV

Code: ١٤٤

Presentation: Basic Sciences

Prerequisite: -

Type of Course: Theoretical (- hours), Practical (١٧ hours), Total (١٧ hours)

Total Goals:

Cognitive Goals:

- Introduction to the responsibilities and the roles of students of medicine in medical team;
- Recognizing the signs and situations causing anger;
- Mentioning the anxiety signs and anti- stress techniques;
- Introduction to the concepts, principles and generalities, methods and application of consultation in medicine and educating the patient;
- Explaining the correct principles of give effective lecture;
- Introduction to the correct principles of designing the scientific audiovisual means including Power Point;
- Explaining the correct principles of giving feedback; Viewpoint Goals:
- Observing the behaviors showing the honesty and medical dignity;
- Observing the principles of professional behavior in clinical environments;
- Feeling commitment on moral ethics against patients, their family and in their professional communications;
- Showing enthusiasm for giving and receiving effective feedback for promoting their function and others; Skill Goals:
- Considering the anger control methods and its adaptive means in related situations;
- Recognizing the stress-making situations and controlling them using the principles of stress management skill suitably;
- Giving speech in student environments according to the principles of rhetoric appropriately;
- Preparing necessary audiovisual content for a lecture using the scientific design principles;
- Using effective feedback principles in related situations;

Description: organized in the form of ٠،٥ practical workshop credit (١٧ hours) including "anti-stress and anger control methods workshop" and "principles of lecturing and rhetoric workshop", this course describes the key ethics and skills a physician shall enjoy in medicine, and also provides the opportunity of getting familiar with the roles expected from clinical students in medical team, discusses the function of moral principles in clinical environments. The anger and stress control skills in foregoing situations are explained and introduced in this course. According to the requirement of acquiring the effective lecturing skill, this course presents some topics on the principles of rhetoric and principal design method of scientific Power Point and also giving efficient feedback. Finally, the most common cognitive and inferential errors are generally reviewed for the purpose promoting the correct inferential skills. At the end of the course, students are expected to get familiar with such principles, and obtain the sufficient knowledge and skills for using them;

Necessary Content:

- Introduction to the clinical environment (early clinical confrontation II);
- Basic principles of personal growth II: anger and wrath, stress management;
- Introduction to giving effective feedback;
- Consultation: introduction to the concepts, principles, rules and goals of consultation and patient education;
- Consultation process;
- Necessary capabilities and skills in consultation, professional role of physician in consultation and patient education;
- Introduction to the principles of scientific presentation (effective lecturing): correct principles of preparing Power Point, rhetoric skills and giving effective lecturing;
- Professional behavior principles in medicine III: observing the professional ethics in clinical environment (reviewing the professional ethics charter): observation, case discussion, limited research;

Remarks: this course is a part of long theme of professional ethics in curriculum of general medicine. Therefore, the result of evaluation is reported in qualitative form (with four grades of more than expectation, in an acceptable form, acceptable by mentioning the further effort in the next courses of medical ethics, and nonacceptable). The first three levels mean passing, and the last failing, which requires taking the course again.
This course is not included in general exam.

The syllabuses presented in this course are on recommendation basis, and curricular planning committee of the university can change them up to ٤٠٪ if required.

Courses of Specialized English Languages

Specialized English Language in Medicine I

Specialized English Language in Medicine II

Specialized English Language in Medicine I

Code: ١٤٥

Presentation: Basic Sciences

Prerequisite: General English Language

Type of Course: Theoretical (٥١ hours), Practical (- hours), Total (٥١ hours)

Total Goals: reading and understanding the medical English texts, realizing and using the academic and medical expressions and words, talking fluently about the medical subjects, and understanding fast the speech of others on the medical topics, and also the importance of English language in educational activities in definite time with cooperation of department (as a viewpoint goal);

Description: according to the increasing need of students and graduates of medicine to study of medical books and papers in order to increase and update their medical knowledge and perform the research on different subjects related to this field, this course tries to increase the students' capabilities and skills in reading and understanding the medical texts. For this purpose, the much time of class (۲/۳rd) is allocated to education of specialized texts reading and comprehension techniques. This course considers the need of students to speaking English language in physical (personal) and virtual environments. Accordingly, a part of class time is allocated to the practice of educating the specialized audio-lingual techniques; so, this class shall be held in English language. Each student shall give lecture in English language in class for at least ۵ minutes.

Necessary Content:

- Physiology of human body;
- Anatomy of human body;
- Molecular change;
- Traditional medicine;
- Hepatitis;
- Surgery;
- Ebula;
- Cardiovascular system I;
- Cardiovascular system II;
- HIV AIDS;
- Cancer;
- Diagnosis;
- Epidemiology I;

-

- Epidemiology II;
- Public healthy I;
- Public health II;
- Pain I;
- Pain II;
- Medical terminology;
- Medical terminology;

Remarks: this class shall be held in English language.

During academic semester, different texts of medical subjects engaged by students in basic and clinical sciences with are presented in the form of reading and conversation skills.

Specialized English Language in Medicine II

Code: ١٤٦

Presentation: Basic Sciences

Prerequisite: Specialized English Language in Medicine I

Type of Course: Theoretical (٥١ hours), Practical (- hours), Total (٥١ hours)

Total Goals: reading and understanding easily the medical English texts with more difficulty, realizing and using the academic and medical expressions and words along with Specialized English Language in Medicine I, talking fluently about the medical subjects, and understanding fast the medical speech, and also using the lingual skills in group activities (medical subjects);

Description: (for continuing and completing the goals of Specialized English Language in Medicine I) amplifying the students' capabilities in reading, speaking and listening so that they can easily search their required concepts in specialized English references and offer their findings in English language;

Necessary Content :

- Emergency medicine;
- Sport medicine;
- Space medicine;
- Immunology;
- Nervous system;
- Digestive system;
- Pulmonary system;
- Psychiatry;
- Nutrition;
- Translation;
- Medical ethics; E-medicine;
  Infectious diseases;

  Hospital acquired infection (nosocomial);

-

Remarks: different specialized medical texts with more diversity and difficulty are used in this course.

Courses of Pathology

General Pathology:

Generalities of Pathology and Cellular Damage

Inflammation, Tissue Recovery and Hemodynamic Pathology Disorders

Human Body Immunity System Disorders Pathology

Neoplasia Pathology

-

Childhood Diseases and Genetic Disorders Pathology

Peripheral, Nutrition and Infectious Diseases Pathology

Practical Pathology

Clinical Pathology

Specialized Pathology

Cardiovascular System

Pulmonary System

Kidney and Upper Urinary Tract

Gastrointestinal System

Liver and Biliary Tract

Congenital System, Lower Urinary Tract and Breast

Hematology and Endocrinology

Skin, Bones, Soft Tissues and Joints

Central and Peripheral Nervous System

Generalities of Pathology and Cellular Damage

Code: ١٤٧

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: Introduction to Anatomy

Type of Course: Theoretical (٩ hours), Practical (- hours), Total (٩ hours)

Total Goals: introduction to generalities of pathology, pathologic manifestations of cellular damage, cell death, and understanding the clinical phenomena of hemodynamic disorders, immunity disorders in human body, tumors, genetic disorders, environmental diseases, malnutrition and infectious diseases by using them;

Description: training the cellular damage process, cell death, inflammation and tissue recovery;

Necessary Content:

Generalities of Pathology (١ hour):

Definition of pathology;

History of pathology;

-
Definition of disease;

- Items related to a disease (definition, etiology, clinical symptoms, etc);
- Pathogenic mechanisms in human body;
- Human body defensive mechanisms in different diseases;
- Diseases diagnosis methods;
- Role of laboratory in diagnosis, treatment and prevention of diseases; Cell Damage, Cell Death and Adjustment (٨ hours):
- Cellular and tissue response to the damaging factors;
- Cellular and tissue adjustment (hypotrophy, hyperplasia, atrophy, and metaplasia);
- Cell damage and cell and tissue death, reasons, factors, tissue changes and some examples (types of necrosis and apoptosis);
- Intracellular and tissue aggregations (calcium sedimentation, fat aggregation, protein, glycogen, and types of resins and amyloidosis);
- Aging process;
- Important clinical items in relation to the cell damage, reasons, factors and some example;

Inflammation, Tissue Regeneration and Hemodynamic Disorders Pathology

Code: ١٤٨

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: Generalities of Pathology and Cell Injury

Type of Course: Theoretical (١٠ hours), Practical (- hours), Total (١٠ hours)

Total Goals: introduction to the changes of inflammation and tissue regeneration well in order to understand the clinical phenomena of hemodynamic disorders, immunity disorders in human body, tumors, genetic disorders, environmental diseases, malnutrition and infectious diseases;

Description: training the inflammation changes and tissue regeneration processes, and training the cellular death and injury process, inflammation and tissue regeneration;

Necessary Content:

Inflammation and Tissue Regeneration (٦ hour):

- General important items on inflammation and inflammation phenomena in human body;
- Types of inflammation and its classification;
- Tissue changes during types of inflammation;
- Inflammation mechanism;
- Effects and results of types of inflammation in human body;
  Tissue regeneration, their mechanism, results and importance;

Important clinical items related to inflammation and tissue regeneration and some examples;
Hemodynamic Disorders (٤ hours):
-

-

- General and important items on blood circulation and fluids in body;
- Hyperemia;
- Edema;
- Bleeding;
- Hemostasis;
- Thrombus;
- Emboli;
- Infarct; - Sahock;
- Important clinical items in relation to each hemodynamic disorders and expressing some examples;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Human Body Immunity System Disorders Pathology

Code: ١٤٩

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: Inflammation, Tissue Regeneration and Hemodynamic Disorders Pathology
Type of Course: Theoretical (٨ hours), Practical (- hours), Total (٨ hours)

Total Goals: introduction to the immunity disorders in human body well in order to understand the related clinical phenomena;

Description: training the immunity disorders in human body based on the cell death process, cell death, inflammation and tissue regeneration and also the pathologic manifestations of hemodynamic disorders;

Necessary Content :

Immunity Disorders in Human Body:

- Introduction to immunity system and its function, supervising and taking care of the human body;
- Injuries arisen from the immunity system malfunction;
- Hypersensitivity of immunity system, reasons, types and injuries;
- Autoimmunity, reasons, types and injuries;
- Immune deficiency, reasons, types and injuries;
  Tissue connection, definition, types and disconnection mechanism; Amyloidosis;

  Important clinical items and examples in terms of each disorder of human body immunity system;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

-

Neoplasia Pathology

Code: ۱۵۰

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: Inflammation, Tissue Regeneration and Hemodynamic Disorders Pathology
Type of Course: Theoretical (۱۰ hours), Practical (- hours), Total (۱۰ hours)

Total Goals: introduction to the tumors and neoplastic changes;

Description: training the tumors and neoplastic changes, based on the cell death process, cell death, inflammation and tissue regeneration and also the pathologic manifestations of hemodynamic disorders, and immunity disorders in human body;

Necessary Content:

- Tumors nomenclature;
- Specifications of malign and benign neoplasm;
- Different steps of carcinogenesis and hallmarks;
- Cancers etiology;
- Host's response to the tumor;
- Clinical view to the neoplasm;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Childhood Diseases and Genetic Disorders Pathology

Code: ۱۵۱

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: Inflammation, Tissue Regeneration and Hemodynamic Disorders Pathology
Type of Course: Theoretical (۸ hours), Practical (- hours), Total (۸ hours)

Total Goals: introduction to the pathology of genetic disorders and the period diseases;

-

Description: training the genetic disorders and childhood diseases;

Necessary Content:

- Nature of genetic disorders in human;
- Mendel disorders;
- Multigene diseases;
- Cytogenetic diseases;
- Monogenic diseases by atypical inheritance;
- Childhood diseases including the congenital anomalies;
- Prenatal infections;
- Respiration distress syndrome (RDS);
- Infant sudden death syndrome;
- Embryonic hydrops;
- Tumor and pseudo- tumor lesions in children;
- Molecular diagnosis of genetic diseases;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Peripheral, Nutritional and Infectious Diseases Pathology

Code: ١٥٢

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: Inflammation, Tissue Regeneration and Hemodynamic Disorders Pathology
Type of Course: Theoretical (٦ hours), Practical (- hours), Total (٦ hours)

Total Goals: introduction to the pathology of the environmental, malnutrition and infectious diseases;

Description: training the genetic disorders, the environmental, malnutrition and infectious diseases;

Necessary Content:

Environmental Diseases and Malnutrition Diseases (٤ hours):

- Toxic and damaging physical and chemical factors;
- Environmental pollutants;
- Tobacco;
- Alcohol;
- Drugs misuse;
- Injury by physical impacts;

-

Nutritional diseases including malnutrition, vitamin deficiency, obesity, overeating, and nervous anorexia;

Infectious Diseases (٢ hours):

- General principles of microbial pathogenesis;
- Specialized techniques for diagnosing the infectious factors;
- New and appearing infectious factors;
- Bioterrorism factors;
- Viral and bacterial injury mechanism;
- Microbe escaping from immunity system;
- Scope of inflammatory response to the infectious factors;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

-

Practical Pathology

Code: ١٥٣

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: Courses of General Pathology (prerequisite or co-requisite)

Type of Course: Theoretical (- hours), Practical (٣٤ hours), Total (٣٤ hours)

Total Goals:

1- Introduction to pathology laboratory, performance method, reception and preparation of samples, answering and archiving;
2- Recognizing types of samples tested and sampling and sample evaluation methods in pathology laboratory;
3- Recognizing the correct method of sending types of clinical samples to pathology laboratory; 4- Connecting the relation of clinical physician with laboratory;

Description: including the principles, processes and general correct methods of clinical work in relation to the pathology laboratory especially recognizing the main types of clinical samples;

Necessary Content:

Introduction to pathology laboratory, performance method, reception and preparation of samples, answering and archiving;
Sampling and sample evaluation methods in pathology laboratory;

Correct method of sending types of clinical samples to pathology laboratory and the relation of clinical physician with laboratory;

Recognizing all types of samples tested including the slides:

1- Squamous metaplasia;
2- Serious abscess with fluid necrosis;
3- Non-specialized chronic inflammation;
4- Granuloma inflammation with caseous necrosis (tuberculosis); 5- Cloning necrosis;
6- Fat aggregation in liver;
7- Melanin aggregation;
8- Calcium sedimentation;
9- Xenatollasma (aggregation);
10- Stem lesion and tissue;
11- Scar or colloid;
12- Tissue hyperemia;
13- Thrombus;

-

14- Infarct;
15- Allergic inflammation;
16- Amyloid sedimentation;
17- Adenoma;
18- Papilloma;
19- Osteochondroma; ٢٠- Lipoma;
21- Adenocarcinoma;
22- Oscoamocelcarcinum;
23- Sarcoma;
24- Lymphoma;
25- Teratum (three-layer embryo);
26- Plasmacytome;
27- Polyps;
28- Dysplasia and carcinoma in place;
29-Metastases;
30- Cystic lesions;
31- Hydatid lesions;
32- Pop Smear;
33- A sample of immunohistochemistry;
34- A sample of cytology;
35- A parasitic disease (aspergillus, mucormycosis, cutaneous lishmaniasis); ٣٦- Other group slides;

Clinical Pathology

Code: ١٥٤

Presentation: Basic Sciences/ Clinical Preliminaries

Prerequisite: General Pathology, Practical Pathology

Type of Course: Theoretical (١٦ hours), Practical (٢ hours), Total (١٨ hours)

Total Goals: introduction to the work process in clinical laboratories for better understanding of their role in the future as a general practitioner in different steps of this process: pre-analytic step (sampling and sending to laboratory) analytic (test performance process), and post- analytic (test results interpretation), compliance of requesting the test and clinical doubt and observation of economic status, sending an appropriate sample to the laboratory, interpreting the results of tests with other Para clinical and clinical findings of patient, if necessary requesting for repetition or complementary tests, having better interaction, cooperation and coordination with laboratory for optimal use of laboratory in diagnosis and treatment;

-

Description: introduction to the work process in clinical laboratories in order to play the role of general practitioner well in the future in different steps of this process: pre-analytic step (sampling and sending to laboratory) analytic (test performance process), and post- analytic (test results interpretation);

Necessary Content:

1- Introduction to different sections of laboratory, sample reception process, working in laboratory, preparing sample and giving answer by mentioning the role of clinical physician in facilitation and promotion of answering;
2- Correct method of requesting types of sample according to the clinical doubt, status of patient and economic efficiency;
3- Correct guide of patient for performing the test accurately and preparing the patient for examination and suitable sampling;
4- Method of appropriate transfer of types of samples to the laboratory and the role of different factors in this step;
5- Principle of common laboratory methods, effective factors on them and limitation of methods in their interpretation and compliance with the clinical signs;
6- Interpreting the laboratory results according to the definitions of test changes, reference intervals, sensitivity, specifications and predicting values of positive and negative results in tests;
7- Requesting the further and complementary tests in case of results different or disharmonic with the clinical findings or different from the previous tests of patient and their interpretation;
8- Blood consumption management, blood compatibility tests including determining the blood groups, antibody screening and performing cross
match and laboratory control of side effects of blood transfusion;
9- Requesting and interpreting the biochemical and urinary tests;
10- Requesting and interpreting the infectious and parasitic tests;
11- Requesting and interpreting the hormone, immunology and serology tests;
12- Requesting and interpreting the hematology tests;
13- Introduction to the health evaluation tests (checkup);
14- Introduction to the diseases prevention tests especially tumor markers;
15- Introduction to the screening and point of care tests;
16- Clinical examples and laboratory challenges especially by focusing on the problems of interpreting the tests and further interaction of clinical side and laboratory;

Remarks: this course may be presented in clerkship course in the workshop form.

Specialized Pathology of Cardiovascular System

Code: ١٥٥

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

-

Type of Course: Theoretical (٦ hours), Practical (٢ hours), Total (٨ hours)

Total Goals: introduction to the common diseases and tumors of cardiovascular system in order to guess the disease of a patient by relying on their knowledge; Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of cardiovascular system;

Necessary Content :

1- Structure and function of blood vessels;
2- Venous tumors and types of vasculitis; 3- Otosclerosis;
4- Clinical phenomena of Otosclerosis;
5- Aneurisms;
6- Ischemic heart diseases and heart congestion deficiency; 7- Endocarditis, myocarditis, and pericarditis;
8- Heart tumors;

Necessary slides of practical section:

1- Heart microm;
2- One type of common hemangioma;
3- One type of common vasculitis; 4- Arthrosclerosis;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Pulmonary System

Code: ١٥٦

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

Type of Course: Theoretical (٦ hours), Practical (٢ hours), Total (٨ hours)

Total Goals: introduction to the common diseases and tumors of pulmonary system in order to guess the disease of a patient by relying on their knowledge;

Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of pulmonary system;

Necessary Content:

-

1- Atelectasis;
2- Serious lung injury;
3- Lung obstruction diseases; 4- Chronic interstitial diseases; 5- Vascular diseases;
6- Lung infections;
7- Lung tumors;
8- Pleura lesions;
9- Upper respiratory system lesions;

Necessary slides of practical section:

Lung: lung cell, hydatid cyst, carcinoma with small cell, other carcinoma of lung such as adenocarcinoma or SCC;
Nose: nose polyps, fungal lesion such as aspergillus or mucormycosis;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Kidney and Upper Urinary Tract

Code: ۱۵۷

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

Type of Course: Theoretical (٦ hours), Practical (٢ hours), Total (٨ hours)

Total Goals: introduction to the common diseases and tumors of kidney and urinary tract in order to guess the disease of a patient by relying on their knowledge;

Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of cardiovascular system;

Necessary Content :

1- Clinical manifestations of kidney diseases; 2- Glomerular diseases and its mechanism; 3- Nephrotic syndrome;
4- Nephritic syndrome;
5- Nephropathy IgA;
6- Congenital nephritis;
7- Fast progressive glomerulonephritis;

-

8- Tubular- interstitial diseases;

9- Interstitial tubular nephritis;

10- Kidney vessel diseases (arterianephrosclerosis, malign hypertension);

11- Chronic kidney disease;

12- Kidney cystic diseases;

13- Tumors;

Necessary slides of practical section: ١- Chronic pyelonephritis;

2- One type of glomerulonephritis;

3- Kidney amyloidosis;

4- Kidney carcinoma;

5- Nephroblastomy;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Gastrointestinal System

Code: ١٥٨

Presentation: Clinical Preliminaries

Prerequisite: Specialized Pathology of Gastrointestinal System

Type of Course: Theoretical (٨ hours), Practical (٤ hours), Total (١٢ hours)

Total Goals: introduction to the common diseases and tumors of gastrointestinal system in order to guess the disease of a patient by relying on their knowledge;

Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of gastrointestinal system;

Necessary Content:

1- Mouth lesions (leucoplakia, malign and benign tumors, malign and benign lesions of salivary gland);

2- Esophagus (esophageal varices, esophagitis, esophagitis reflux, Barrett's esophagus, esophageal tumors);

3- Stomach (its inflammatory and neoplastic diseases);

4- Small and great intestine (Hirschsprung, diarrheal diseases, colon inflammatory diseases, colon polyps, colon tumors); ٥- Appendices;

Necessary slides of practical section:

-

Salivary glands: adenoma pleomorphic, adenoid cystic carcinoma;

Esophagus: SCC;

Stomach: a type of gastric preferably by helicobacter pollution, ordinary gastric

Adenocarcinoma, cell carcinoma, Signet Ring, GIST;

Colon: celiac disease, one type of BD, colon adenoma polyp, colon carcinoma, colon carcinoid, colon lymphoma;
Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Liver and Biliary Tract

Code: ١٥٩

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

Type of Course: Theoretical (٦ hours), Practical (٢ hours), Total (٨ hours)

Total Goals: introduction to the common diseases and tumors of liver and biliary tract in order to guess the disease of a patient by relying on their knowledge;

Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of liver and biliary tract;

Necessary Content:

1- Liver deficiency;
2- Jaundice and cholestasis;
3- Cirrhosis;
4- Hypertension port;
5- Chronic and serious hepatitis;
6- Viral hepatitis;
7- Alcohol and non-alcohol fat liver;
8- Cholestatic diseases (PBC, PSC);
9- Congenital metabolic diseases;
10- Liver abscess;

-

11- Liver tumors and nodules;
12- Gallbladder diseases;
13- Gallbladder cancer;
14- Exocrine pancreas lesions (pancreatitis, pancreas neoplasm);

Necessary slides of practical section:

1- One type of hepatitis;
2- Fat aggregation; 3-
Cirrhosis;
4- Liver cell carcinoma;
5- Metastasis to liver;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Liver and Biliary Tract

Code: ١٥٩

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

Type of Course: Theoretical (٦ hours), Practical (٢ hours), Total (٨ hours)

Total Goals: introduction to the common diseases and tumors of liver and biliary tract in order to guess the disease of a patient by relying on their knowledge;

Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of liver and biliary tract;

Necessary Content:

15- Liver deficiency;
16-Jaundice and cholestasis;
17- Cirrhosis;
18- Hypertension port;
19- Chronic and serious hepatitis;
20- Viral hepatitis;

-

21- Alcohol and non-alcohol fat liver;
22- Cholestatic diseases (PBC, PSC);
23- Congenital metabolic diseases;
24- Liver abscess;
25- Liver tumors and nodules;
26- Gallbladder diseases;
27- Gallbladder cancer;
28- Exocrine pancreas lesions (pancreatitis, pancreas neoplasm);

Necessary slides of practical section:

6- One type of hepatitis;
7- Fat aggregation; 8-
Cirrhosis;
9- Liver cell carcinoma;
10-Metastasis to liver;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Genital System, Lower Urinary Tract and Breast

Code: ١٦٠

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

Type of Course: Theoretical (١٠ hours), Practical (٤ hours), Total (١٤ hours)

Total Goals: introduction to the common diseases and tumors of genital system, lower urinary tract in men and women genital system and breasts in order to guess the disease of a patient by relying on their knowledge;

Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of genital system, lower urinary tract in men and women genital system and breasts;

Necessary Content:

١- Men Genital System and Lower Urinary Tract (٢ hours):

-

- Penis (inflammatory lesions, neoplasms);
- Scrotum, tentacle, oppidum;
- Prostate;
- Ureter, urethra, bladder;
- Pathology of diseases transferred by sexual discourse; ٢- Women Genital System (٦ hours):
- Vulva (inflammatory lesions, non-neoplastic lesions, tumors);
- Vagina (inflammatory lesions, malign tumors, SCC, adenocarcinoma, sarcoma Bureotide);
- Cervix (inflammatory lesions of cervix, cervix neoplasia, aggressive cervix cancer, endocervical polyp);
- Trunk of the womb (endometritis, adenomyosis, AUB, endometer and myometer proliferative lesions, endometrium hyperplasia, carcinoma endometrium, endometrium polyps, lyomium, Lyomiosarcoma;
- Ovaries (follicle cysts and ovaries, polycyst ovary, ovary tumors, surface Epithelial tumors, serous tumors, mosinoss tumors, endometritis tumors);
- Pregnancy diseases (placenta inflammations and infections, ectopic pregnancy, trophoblastic disease);
- Preeclampsia, eclampsia; ٣- Breast Diseases (٢ hours): - Fibrocystic changes;
- Inflammatory processes;
- Tumors;
- Breast lesions in men;

Necessary slides of practical section:

Bladder: TCC;

Testicle: testicle atrophy, seminoma, non-seminoma tumor;

Prostate: prostate hyperplasia and adenocarcinoma;

Uterine and placenta: endometrium hyperplasia, uterine fibroid, uterine adenocarcium, mole hydratiform;
Cervix: squamous metaplasia inflammation, cervix dysplasia, cervix polyp, SCC, Pop Smear;
Ovary: serous and mosinoss cyst, one type of ovary carcinoma, ovary teratum; Thyroid: nodular goiter, Hashimoto disease, thyroid adenoma, papillary carcinoma, modular carcinoma;
Breast: fibrocystic disease, fibroadenoma, typical kind of ductal carcinoma, typical kind of lobular carcinoma;
Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Hematology and Endocrinology

Code: ١٦١

-

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

Type of Course: Theoretical (١٠ hours), Practical (٢ hours), Total (١٢ hours)

Total Goals: introduction to the common diseases and tumors of endocrine system and breasts in order to guess the disease of a patient by relying on their knowledge; Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of endocrine system and breasts;

Necessary Content:

١- Endocrine Gland (٤ hours):

- Hypophysis;
- Thyroid;
- Parathyroid gland;
- Endocrine pancreas;
- Adrenal cortex;
- Adrenal modula; ٢- Hematology (٦ hours):
- RBC lesions (types of anemia);
- WBC lesions (neoplastic lesions);
- Spleen and thymus lesions (splenomegaly, malign and benign lesions);

Necessary slides of practical section:

Adrenal: Pheochromocytoma, Neuroblastoma;

Lymphatic node: cell, one type of Hodgkin's lymphoma, one type of non- Hodgkin's lymphoma;
Marrow: one type of serious leukemia, one type of chronic leukemia, various myeloma;
Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Skin, Bones, Soft Tissues and Joints

Code: ١٦٢

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

Type of Course: Theoretical (٨ hours), Practical (٤ hours), Total (١٢ hours)

Total Goals: introduction to the common diseases and tumors of skin, bones, soft tissues and joints in order to guess the disease of a patient by relying on their knowledge;
Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of skin, bones, soft tissues and joints;

-

Necessary Content :

١- Dermatology Pathology: serious and chronic inflammatory dermatoses, Visculobulose, Pemphigus, Pemphigoid, Herpetiform Dermatitis, malign and benign skin lesions; ٢- Bone Diseases:

- Congenital bone and joint disorders;
- Acquisitive bone diseases;
- Osteomyelitis;
- Bone tumors; ٣- Joint Diseases:
- Arteritis;
- Joint tumors and pseudo- tumor lesions; ٤- Soft Tissues Diseases:
- Soft tissue tumors and its types;

Necessary slides of practical section:

Skin: one common inflammatory diseases such as Lichen planus or psoriasis, a blister such as Pemphigus, verruca, Seborrheic Keratosis, Neuss Melanocity, Melanoma, BCC and SCC;
Bone: Chondroma and Chondrosarcoma, osteochondroma, osteosarcoma, Ewing's sarcoma;
Soft Tissue: one type of benign tumors such as lipoma or fibroma, Schwannoma, fibromatosis, one typical kind of sarcomas;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Specialized Pathology of Central and Peripheral Nervous System

Code: ١٦٣

Presentation: Clinical Preliminaries

Prerequisite: General Pathology

Type of Course: Theoretical (٨ hours), Practical (٢ hours), Total (١٠ hours)

Total Goals: introduction to the common diseases and tumors of central and peripheral nervous system in order to guess the disease of a patient by relying on their knowledge;

Description: training the etiology, pathogenesis, morphology, clinical manifestations of common diseases and tumors of central and peripheral nervous system;

Necessary Content:

1- Nervous system injury plan;
2- Cerebral vascular disease;
3- Infections of nervous system;

-

4- Initiative myelin;
5- Neurodegenerative diseases;
6- Tumors;
7- Familiar tumor syndromes;
8- Peripheral nerve disorders;
9- Nerve and muscle function injury;
10-Malign and benign tumors of peripheral nerves;
11-Musculoskeletal diseases;

Necessary slides of practical section:

Astrocytoma, meningioma, Ependymoma;

Remarks: education of pathologic subjects may be organized and integrated into the educational program of university in the form of independent educational packages by observing the approved educational titles, contents and hours.

Courses of Medical Pharmacology

Basic Principles of Medical Pharmacology

Cardiovascular and Pulmonary Pharmacology

Antimicrobial Drugs Pharmacology

Gastrointestinal, Hematology and Rheumatology Pharmacology

Endocrine Drugs Pharmacology

Neurology System Pharmacology

Basic Principles of Medical Pharmacology

Code: ١٦٤

Presentation: Basic Sciences, Clinical Preliminaries

Prerequisite: Biochemistry, Physiology, Nervous System Anatomy

Type of Course: Theoretical (١٧ hours), Practical (- hours)

Total Goals: understanding basic concept of pharmacology, communication of such concepts with pharmacological effects of drugs and using the special drugs in systems pharmacology;

-

Description: introduction to the preliminaries and basic concepts of pharmacology including kinetics and dynamics of drugs, and also the drugs of autonomic system as an introduction to the systems pharmacology;

Necessary Content:

- Introduction to Pharmacology: definition of pharmacology, databases in pharmacology and pharmaceutical information, nature and specifications of drugs (molecular weight and size, connections of drug), pharmacodynamics principles (receptors and other places of pharmaceutical connection), pharmacokinetic principles (introduction to absorption, distribution, metabolism, desorption), new drugs production and confirmation process (safe and efficiency, animal tests, clinical trials, pharmaceutical monopoly, new drugs, drugs laws and regulations, Orphan drugs);
- Pharmacokinetics: effective drug concentration, distribution volume, clearance, half-life, bioactivity, removing drugs, reasonable diet of drugs subscribed doses, medical scope, regulating dosage in excretion of stool cases, drugs metabolism (types, indices of determining the metabolism speed, correct consumption method and comparison of solid dosage forms and edible liquid, injection products, aspiration products, local products (cutaneous, eye, nose and ear, rectal, vaginal, etc) and other methods;
- Pharmacodynamics: definition of drug receptor and effector, nature of receptors, other places of drugs function, drugs intervention by receptors, drugs classifications based on their effects on the receptor, definition and comparison of drugs in terms of affinity, intrinsic activity, measures of quantitative comparison of drugs (efficacy, potency and $ED_{٥٠}$), graded dose- response curves, definition and comparison of agonist drugs, antagonist partial agonist, inverse agonists, competitive and non-competitive antagonist, pharmacologic, chemical and physiological antagonists, quantal dose- response curves, drugs immunity comparison criteria (certain safety factor, therapeutic index, $TD_{٥٠}$, $LD_{٥٠}$), receptors setting, interpersonal changes and types of such change in responding the drugs, treatment, reception (adherence, compliance and concordance), tolerance and Taci Fiacles, medical effects and side effects of drugs (side effects, toxicity, Idiosyncrasy, tolerance, aggregation, allergic, etc), pharmacovigilance, pharmacogenetics;

All definitions, concepts, comparisons, etc. will be presented by mentioning the pharmaceutical examples:

- Introduction to Autonomy Nervous System: comparing the autonomy system with sensory and motion nerves, classification of autonomy nerves (nervous nodes, pre-node and post-node fibers, etc.), message transfer method in cholinergic and adrenergic nerves (saving, releasing and ending the effect), introduction to the general mechanisms of function of effective drugs on production steps, saving, releasing and ending the effect of sympathetic and parasympathetic systems, types of cholinergic and adrenergic receivers, their distribution and function in different tissues, effects of motivation of parasympathetic and sympathetic systems on body organs and their interactions, positions and regulating the autonomy nerves, auxiliary or accompanied transmitters (cotransmitter), details of function of autonomy nerves of heart and vessels in regulating the medium vessel pressure, in eye and colon (as important examples);
- Esters Anticholine and Cholinergic Receptors Motivation Drugs: classification of cholinergic drugs (cholinomimetic), main clinical applications of direct activating parasympathomimetic drugs (such as bethankool, pilocarpine, and cevimeline), indirect operating cholinergic drugs including the classification, clinical applications, toxic and side effects, precautions, differences of such drugs

-

(such as Adfronium, Physostagmin, tacrine, rivastigmine, etc.), available pharmaceuticals in this group of drugs;

- Cholinergic Nicotine and Muscarinic Receptors Preventive Drugs: classification, clinical applications, toxic and side effects, precautions, differences of such drugs, available pharmaceuticals in this group of drugs;
- Sympathomimetic Drugs: classification, clinical applications, toxic and side effects, precautions, differences of such drugs, available pharmaceuticals in this group of drugs;
- Sympathetic Receptors Preventive Drugs: classification, clinical applications, toxic and side effects, precautions, differences of such drugs, available pharmaceuticals in this group of drugs;

Cardiovascular and Pulmonary Drugs Pharmacology

Code: ١٦٥

Presentation: Clinical Preliminaries, Clerkship

Prerequisite: Basic Principles of Medical Pharmacology

Type of Course: Theoretical (١٠ hours), Practical (- hours)

Total Goals:

1- Introduction to the pharmaceutical groups used in common diseases of cardiovascular and pulmonary systems according to the course syllabus, and also pharmacological specifications (absorption, distribution, metabolism, desorption, and effects of drugs on different body organs) on top or mostconsumable drugs of each group;
2- Paying attention to the dangerous and important side effects of drugs used in common diseases of cardiovascular and pulmonary systems;
3- Considering the importance of studying the last guidelines and evidence in case of consumption before prescription of such drugs according to the speed of scientific developments and findings of clinical trials in case of introduction to new drugs and specifying the applications or side effects of cardiovascular and pulmonary drugs;

Description: introduction to the pharmaceutical groups used in common diseases of cardiovascular and pulmonary systems, and pharmacokinetic and pharmacodynamics specifications of such drugs, and observing some samples of changes in guidelines of application of such drugs arisen from the new evidence in clinical retrials;

Necessary Content:

Pharmaceutical groups used in hypertension and most-consumable drugs of each group:

- Vasodilators and angina therapy;
- Effective drugs on cardiac failure;
- Anti-rhythmic drugs;
- Diuretic drugs (carbonic anhydrase interrupters, thiazides, effective diuretics on Henle's loop, others);

-

- Drugs used in hyperlipidemia treatment;
- Bronchodilator and other drugs used in asthma, allergic rhinitis, cough;

Antimicrobial Drugs Pharmacology

Code: ١٦٦

Presentation: Clinical Preliminaries, Clerkship

Prerequisite: Basic Principles of Medical Pharmacology

Type of Course: Theoretical (١٠ hours), Practical (- hours)

Total Goals:

1- Introduction to the pharmaceutical groups effective on infectious diseases according to the course syllabus, and also pharmacological specifications (absorption, distribution, metabolism, desorption, and effects of drugs on different body organs) on top or most-consumable drugs of each group;
2- Paying attention to the dangerous and important side effects of drugs effective on the infectious diseases;
3- Considering the importance of studying the last guidelines and evidence in case of consumption before prescription of such drugs according to the speed of scientific developments and findings of clinical trials in case of introduction to new drugs and specifying the applications or side effects of infectious diseases;

Description: introduction to the pharmaceutical groups effective on the infectious diseases, and pharmacokinetic and pharmacodynamics specifications of such drugs, and observing some samples of changes in guidelines of application of such drugs arisen from the new evidence in clinical retrials;

Necessary Content:

- Penicillin and cephalosporin;
- Aminoglycosides;
- Sulfonamides and trimethoprim;
- Fluoroquinolones;
- Chloramphenicol, tetracycline and macrolides;
- Anti- mycobacteria drugs;
- Anti-viral drugs;
- Anti-helminth and anti- protozoal drugs;
- Other drugs and local disinfectants;

-

Internal Medicine Clerkship

Code: ۱۸۸

Presentation: Clerkship: General Internal Diseases are necessarily presented in Clerkship I for two months;
Prerequisite: -

Type of Course: Obligatory, ۳ Months (or ۱۲ Weeks), ۹ Clerkship Credits

Total Goals:

۱-Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;

۲-Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;

۳-Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);

٤-Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.
Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content : according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of

-

capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.
The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.
Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Clinical Clerkship of Cardiovascular Diseases

Code: ۱۹۰

Presentation: Clerkship I or II

Prerequisite: Courses of Clinical Preliminaries

-

Type of Course: Obligatory, ١ Month (٤ Weeks), ٣ Credits

Total Goals:

١-Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;

٢-Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;

٣-Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);

٤-Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.
Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content: according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

-

Clinical Clerkship of Pediatrics

Pediatrics Clerkship

Theoretical Course of Pediatrics

Pediatrics Clerkship

Code: ۱۹۲

Presentation: Clerkship I and II

Prerequisite: Clinical Preliminaries of Pediatrics

Type of Course: Obligatory, ۳ Months (or ۱۲ Weeks), Total ۹ Clerkship Credits

Total Goals:

۱-Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;

۲-Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;

-

٣-Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);

٤-Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.

Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content : the universities presenting student program (clerkship) as Clerkship I and I (student and externship) can use the suggested program in the presented form, and those not executing externship program in a separate program present total suggested subjects for Clerkship I and II in the form of educational clerkship program.

The students of this program are advised to attend clinics, general wards, and emergency for ٦٠-٧٠٪ of clinical education, and in subspecialty sections for ٣٠-٤٠٪ of the program duration, and minimize the rotational programs of students of this program in subspecialty sections.

According to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.

It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Pediatrics I

Code: ١٩٤

Presentation: Clerkship

-

Prerequisite: -

Type of Course: Theoretical (٦٨ hours)

Total Goals: according to the attached list,

A. Facing each common and important symptoms and complaints:

١-Describing the definition;

٢-Describing focused history taking and physical exam;

٣-Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases:

١. Explaining the definition, etiology and epidemiology of disease;

٢-Explaining the problems of patients suffering from the important common diseases;
٣-Describing the patient diagnosis methods;

٤-Explaining the most important preventive proceedings in different levels including the patient treatment and rehabilitation based on the scientific evidence and local guidelines to the extent expected from general practitioner;
٥-Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field;

Description: meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;

Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.
Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.

Necessary Content : According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.
The amount and time of presenting the theoretical classes shall not fail the clinical learning of students. It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

١-Obtaining medical history and physical examination of children;

-

۲-Introduction to normal and abnormal growth in children and using the growth curves;

2. Introduction to the normal and abnormal evolution and growth evaluation means in children according to the national program of healthy child and early child development;
3. Nutrition with mother milk, consulting the feeding mother, mother diseases and consuming drugs during milk feeding;
4. Nutrition during the different periods from six-month age to adulthood (assessment, consultation) according to the national program of healthy child and early child development; 5.

Common nutritional problems during childhood and adolescence according to the national program of healthy child (FTT, obesity and lack of micronutrients);

6. Promoting the children health in the field of preventing the accidents, poisoning, burning, contagious and non-contagious diseases, role of physician according to the national program of healthy child (self-reading);
7. Introduction to national vaccination program (as self-reading);
8. Introduction to evaluation of disease child according to Mana national program; 9.

Examining the healthier infant and initial cares in birth room;

10. Respiratory distress, apnea and cyanosis in infants;
11. Jaundice in infants;
12. Convulsion and hypoglycemia in infants;
13. Nutrition and fluid therapy in infants and children;
14. Fever in children;
15. Bellyache in children;
16. Vomiting and nausea in children;
17. Constipation in children;
18. Jaundice in children;
19. Hepatosplenomegaly in children;
20. Acute loose paralysis in children;
21. Lymphadenopathy in children;
22. Polyuria in children;
23. Introduction to common symptoms of malign diseases in children (as self- reading);
24. Infection in infants;
25. Lower respiratory system infection in children;
26. Upper respiratory system infection and treatment of respiratory distress and air way obstruction child (croup, epiglottis, and foreign object);
27. Brain infection in children (pathophysiology, symptoms and signs);
28. Headache in children (as self-reading);
29. Convulsion in children;
30. Clinical symptoms, signs and diagnosis of common neuromuscular diseases in children (lame child);
31. Coagulation disorders in children;
32. Anemia in children;

-

33. Natural maturity and normal and abnormal maturity signs;
34. Hypocalcaemia and rictus in children and infants;
35. Urinary infection in children (as self-reading);
36. Glomerulonephritis and nephrotic syndrome in children;
37. Oliguria and kidney deficiency in children;
38. Asthma;
39. Hives, angioedema, anaphylaxis and atopic dermatitis and serum disease;
40. Salmonellosis- Brucellosis;
41. Pertussis, dysphoria and tetanus;
42. Intestinal parasitic diseases (as self-reading);
43. Osteomyelitis and septic arteritis;
44. Common viral dermal diseases (rubella, scarlet, Roseola, chicken pox) (as self-reading);
45. Common non-dermal viral diseases (as self-reading);
46. Hypothyroid/ hyperthyroid in children;
47. Tuberculosis in children;
48. Common parasitic diseases (Kala-azar and malaria) (as self-reading);
49. Common vasculitis in children (Kawasaki, Henoch) (as self-reading);
50. Sugar diabetics and DKA;
51. Introduction to common and important cardiac congenital diseases;
52. Hypertension in children;
53. Heart deficiency in children;
54. Acute diarrhea (as self-reading);
55. Common genetic syndromes (including MR) (as self-reading);
56. Common symptoms of metabolic congenital diseases;
57. Common dermal diseases in children;
58. Restlessness;
59. Lameness;
60. Disorder of urine control and enuresis;
61. Shock in children;
62. Gastrointestinal bleeding (upper and lower);
63. Consciousness disorder (coma and delirium);
64. Abnormal U/A analysis;
65. Hyponatremia and hypernatremia in children;
66. Acid and base disorders in children;
67. Treatment of caustic matters digestion with foreign object;
68. sinking- electrical shocks;
69. Common poisoning in children;
70. Hepatitis;

-

71. Rheumatic fever and endocarditis;

It is advised to the educational department to specify and notify the evaluating the learning activities of theoretical subjects performed as self-reading at the beginning of educational process.
In order to educate national program of healthy child care, it is necessary to establish some special clinics with coordination of health deputy of universities under supervision of faculty members of department of pediatrics by presence of the interns, clerkship students and specialty residents of pediatrics.
It is advised to t hold Mana training workshops (before or at the beginning of pediatrics) for learners of this program in addition to the theoretical education of Mana.
Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Pediatrics II

Code: ۱۹۵

Presentation: Clerkship

Prerequisite: Pediatrics I

Type of Course: Theoretical (۱۷ hours)

Total Goals: according to the attached list,

A. Facing each common and important symptoms and complaints:

۱-Describing the definition;

۲-Describing focused history taking and physical exam;

۳-Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases:

۱-Explaining the definition, etiology and epidemiology of disease;

۲-Explaining the problems of patients suffering from the important common diseases;

۳-Describing the patient diagnosis methods;

٤-Explaining the most important preventive proceedings in different levels including the patient treatment and rehabilitation based on the scientific evidence and local guidelines to the extent expected from general practitioner;

٥-Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field;

Description: Meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;

-

Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.
Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.

Necessary Content : According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.
The amount and time of presenting the theoretical classes shall not fail the clinical learning of students. It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

١-Introduction to children normal and abnormal growth patterns and using growth curves and introduction to normal and abnormal evolution patterns and children growth evaluation means according to national program of healthy child and early child development;

٢-Treatment of restlessness child;

٣-Treatment of fever child;

٤-Treatment of cerebral infection symptoms child;

٥-Treatment of lameness child;

٦-Urine control and enuresis disorder in children;

٧-Children shock treatment;

٨-Upper and lower gastrointestinal bleeding child treatment;

٩-Consciousness (coma and delirium) disorders children treatment;

١٠-Abnormal U/A analysis;

١١-Children hyponatremia and hypernatremia treatment;

١٢-Children acid and base disorders treatment;

١٣-Treatment of a child digesting caustic matter or a foreign object;

١٤-Treatment of a child sinking or electrical shock;

١٥-Children common poisoning treatment;

١٦-Hepatitis;

١٧-Rheumatic and endocarditis fever;

-

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Clinical Education of General Surgery

General Surgery Clerkship

Theoretical Course of General Surgery

General Surgery Clerkship

-

Code: ١٩٦

Presentation: Clerkship: general surgery is necessarily presented in Clerkship I for two months;
Prerequisite: Clinical Preliminaries of Pediatrics

Type of Course: Obligatory, ٢ Months (or ٨ Weeks), ٦ Credits

Total Goals:

١-Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;

٢-Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;

٣-Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);
٤-Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);
Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.
Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content: According to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.
The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.
Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

-

Theoretical Course of General Surgery

Code: ۱۹۷

Presentation: Clerkship

Prerequisite: -

Type of Course: Obligatory, ۲ Months (۸ Weeks), ۸ Credits

Total Goals:

۱-Cooperating with personnel and other health team members in a good manner;
۲-Indicating specifications of good professional behavior in communications in a good manner, and indicating the commitment, skillfulness, and self-confidence necessary for performing the professional responsibilities especially under different clinical conditions;
۳-Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
٤-Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);
٥-Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);
Description: in this course, students shall acquire necessary capabilities for performing independent services related to this section in general medicine according to the capabilities expected from general practitioners by cooperation in presenting health services in the related fields (hospital, clinic, health services centers, etc.), attending the specified educational sessions, and personal study;
Educational Activities: Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.
Necessary Content : according to the different conditions of education in different faculties and sections, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree.
The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices. Type and amount of duties and services assigned to interns in each clinical rotation shall be according to the educational goals of section, not disturbing the learning of necessary expected skills. At least one third of interns training time shall be allocated to clinical education and emergency.
Supervision may be applied for the higher levels (interns, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

-

Common Symptoms and Complaints:

١-Neck tumor;

٢-Dysphagia;

٣-Breast tumor;

٤-Breast pain;

٥-Breast secretion;

٦-Vomiting and nausea;

٧-Acute stomachache;

٨-Chronic stomachache;

٩-Stomach tumor;

١٠-Obstructive jaundice;

١١-Upper gastrointestinal bleeding (hematomas);

١٢-Lower gastrointestinal bleeding (bleeding through rectum);

١٣-Groin tumor;

١٤-Feet lameness (claudication);

١٥-Upper limb acute pain according to the venous problems;

١٦-Upper limb chronic pain according to the venous problems;

١٧-Nodule thyroid;

١٨-Lymphadenopathy of neck zones, groin axilla;

١٩-Plural effusion;

٢٠-Failure in gas and stool disposal;

٢١-Stool disposal disorder;

٢٢-Abdominal distension;

٢٣-Rectum pain;

٢٤-Rectum itching;

Important Syndromes and Diseases: Must Know:

1- Shock;
2- Burning;
3- Gastric cancer;
4- Acute appendices;

-

5- Colon maligns diseases;
6- Small and large intestines benign diseases;
7- Gastric and duodenum peptic diseases;
8- Acute and chronic pancreatitis;
9- Intestinal obstruction;
10- Abdominal hernia and groin;
11- Biliary tract diseases by focusing on the gallstone diseases;
12- Pancreas cysts by focusing on the malign pancreas diseases;
13- Malign breast diseases;
14- Benign thyroid diseases by focusing on goiter and hyperthyroidism;
15- Malign thyroid diseases;
16- Malign and benign liver cysts by focusing on the common diseases in country;
17- Major trauma (injury administration based on ATLS findings);
18- Managing water, electrolyte and acid- base in surgery patients;
19- Administering surgery patients before and after operations;
20- Bleeding and surgery hemostasis and principles of blood transfusion;
21- Acute surgical cares;
22- Surgical infections;
23- Administering lesions and lesion repair;
24- Gastric reflux to esophagus;
25- Medical history and examining cardiovascular surgery patient;
26- Treatment (classification, CT findings, emergencies), and administering patient skull trauma (head injury).
27- Administering spinal cord trauma patient;
28- Brain vascular diseases;

Better to Know:

1- Esophageal carcinoma;
2- Intestinal inflammatory diseases;
3- Diverticular diseases; ٤- Benign breast diseases;
5- Parathyroid diseases;
6- Adrenal diseases;
7- Peripheral vascular diseases with lesions in lower limb;
8- Vessels aneurysm diseases;
9- Venous diseases by focusing on deep vessel thrombosis and varicose diseases;
10- Common cases and pediatric surgery emergencies;
11- Nutrition in surgery patients;
12- Malign skin lesions;
13- Port venous hypertension and its side effects;
14- Spleen and lymphatic gland diseases;

-

15- Chest, trachea, lung and pleura diseases;
16- Brain tumors (types, symptoms, findings, prentice);
17- Hydrocephalia and maningocephalia;
18- Backache and lumbar disc herniation (low back pain and HLD);
19- Small colon malign diseases;
20- Obesity;

During this rotation, the common diagnostic methods and tests shall have application in clinical activity of general practitioner, and request and interpretation of results of such tests and methods in common surgical diseases and disorders. During this rotation, the common drugs used in clinical activity of general practitioner, and writing prescription in common surgical disorders and diseases shall be trained.
Learners will learn Better To Know items for treatment of a patient related to the section as self-study or electronic form.
During this course, it is necessary to learn and practice the safety considerations of patients.

Necessary Procedures:

١-Controlling the foreign bleedings;

٢-Using surgical equipment;

٣-Local anesthesia;

٤-Stitching and removing the skin stitch;

٥-Taking care of lesion including washing and dressing;

٦-Cooperation in performing the complicated dresses with simple debridement;

٧-Cooperation in abscess drainage;

٨-Placing the gastric tube;

٩-Placing urinary catheter;

١٠-Cooperation in placing rib cage tube;

١١-Needle tracheostomy in pressing pneumothorax;

١٢-Partnership in performing Cricothyroidothermia;

١٣-Thoracosynthesis;

١٤-Abdominal Para synthesis;

١٥-Administering the burning lesion;

١٦-Installing rectal tube;

١٧-Hematoma discharge under nail (preferable);

-

۱۸-Tracheostomy with tube (preferable);

۱۹-Circumcision (preferable);

۲۰-Peripheral vascular cut down (preferable);

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine. Fractures and dislocations of spinal cord are trained in neurosurgery ward.

Surgical Diseases

Code: ۱۹۸

Presentation: Clerkship

Prerequisite: -

Type of Course: Theoretical (۸۵ hours)

Total Goals: according to the attached list,

A. Facing each common and important symptoms and complaints:

۱-Describing the definition;

۲-Describing focused history taking and physical exam;

۳-Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases:

۱-Explaining the definition, etiology and epidemiology of disease;

۲-Explaining the problems of patients suffering from the important common diseases;

۳-Describing the patient diagnosis methods;

٤-Explaining the most important preventive proceedings in different levels including the patient treatment and rehabilitation based on the scientific evidence and local guidelines to the extent expected from general practitioner;

٥-Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field;

Description: Meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;

Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.

-

Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.
Necessary Content: According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.
The amount and time of presenting the theoretical classes shall not fail the clinical learning of students. It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

A. Treatment of Common Symptoms and Complaints in Surgical Diseases:

١-Dysphagia;

٢-Head and neck tumors;

٣-Common breast problems: tumor, pain and secretion;

٤-Vomiting and nausea;

٥-Acute and chronic stomach ache;

٦-Abdominal and groin tumor;

٧-Obstructive jaundice;

٨-Gastrointestinal bleeding (upper and lower);

٩-Foot lameness (claudication);

١٠-Lower limb acute pain according to the vascular problems;

١١-Lower limb chronic pain according to the vascular problems;

١٢-Nodule thyroid;

١٣-Lymphadenopathy of neck zones, groin axilla;

١٤-Plural effusion;

١٥-Stool disposal disorder;

١٦-Common anorectal complaints (anal pain and itching);

١٧-Shock;

١٨-Burning;

B. Common and Important Diseases in General Surgery:

١٩-Gastric cancer;

-

٢٠-Acute appendices;

٢١-Colon malign diseases;

٢٢-Small and large intestines, and anus benign diseases;

٢٣-Gastric and duodenum peptic diseases;

٢٤-Acute and chronic pancreatitis;

٢٥-Intestinal obstruction;

٢٦-Abdominal hernia and groin;

٢٧-Biliary tract diseases by focusing on the gallstone diseases;

٢٨-Pancreas cysts by focusing on the malign pancreas diseases;

٢٩-Malign breast diseases;

٣٠-Benign thyroid diseases by focusing on goiter and hyperthyroidism; ٣١-Malign thyroid diseases;

٣٢-Malign and benign liver cysts by focusing on the common diseases in country.

٣٣-Major trauma (injury administration based on ATLS findings)

٣٤-Managing water, electrolyte and acid- base in surgery patients;

٣٥-Administering surgery patients before and after operations;

٣٦-Bleeding and surgery hemostasis and principles of blood transfusion;

٣٧-Acute surgical cares;

٣٨-Surgical infections;

٣٩-Administering lesions and lesion repair;

٤٠-Gastric reflux to esophagus;

٤١-Medical history and examining cardiovascular surgery patient;

٤٢-Treatment (classification, CT findings, emergencies), and administering patient skull trauma (head injury);

٤٣-Administering spinal cord trauma patient;

٤٤-Brain vascular diseases;

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Orthopedics Clerkship

Code: ١٩٩

-

Presentation: Clerkship (Clerkship I and II according to program of university)

Prerequisite: -

Type of Course: Obligatory, ١ Month (٤ Weeks), ٣ Credits

Total Goals:

1. Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2. Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
3. Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);

Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);
Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.
Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.
Necessary Content : according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.
The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.
Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the

-

learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Orthopedics Clerkship

Code: ٢٠٠

Presentation: Clerkship

Prerequisite: -

Type of Course: Elective, ١٥ Days to ١ Month (٢-٤ Weeks), ٢ Credits per Two-Week Clerkship

Total Goals:

1- Cooperating with personnel and other health team members in a good manner;
2- Indicating specifications of good professional behavior in communications in a good manner, and indicating the commitment, skillfulness, and selfconfidence necessary for performing the professional responsibilities especially under different clinical conditions;
3- Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
4- Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);
5- Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: In this course, students shall acquire necessary capabilities for performing independent services related to this section in general medicine according to the capabilities expected from general practitioners by cooperation in presenting health services in the related fields (hospital, clinic, health services centers, etc.), attending the specified educational sessions, and personal study; Educational Activities: Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.
Necessary Content: according to the different conditions of education in different faculties and sections, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices. Type and amount of duties and services assigned to interns in each clinical

-

rotation shall be according to the educational goals of section, not disturbing the learning of necessary expected skills.
At least one third of interns training time shall be allocated to clinical education. Supervision may be applied for the higher levels (interns, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students.
Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Common Symptoms and Complaints:

1. Knee pain including osteoarthritis, lesions in meniscus and ligaments, and joint liquid;
2. Hip pain including osteoarthritis, necrosis avascular;
3. Foot and ankle pain including cartilage and ligament lesions, and flat feet;
4. Shoulder pain including inflammatory lesions (boresight, tendinitis and prearthritis) and instability;
5. Elbow pain including elbow of tennis players;
6. Hand and wrist pain carpal tunnel syndrome, ganglion and Kienbock disease;
7. Backache and neck ache;
8. Child limping;

٩-Congenital limb deformity including congenital hip dysplasia, bandy-legged and noncongenital, including Genovarum and Genuvalogue;

١٠-Bone and soft tissue tumors;

١١-Joints inflammation;

١٢-Multiple trauma;

١٣-Fracture and dislocations of upper and lower limbs, hips, spinal cord;

During this rotation, the common diagnostic methods and tests shall have application in clinical activity of general practitioner, and request and interpretation of results of such tests and methods in common orthopedic diseases and disorders.
Important Syndromes and Diseases: ١-Common hip diseases;

٢-Common knee diseases;

٣-Common ankle diseases;

٤-Common shoulder diseases;

٥-Common elbow diseases;

٦-Common wrist diseases;

٧-Common spinal cord diseases;

٨-Common limbs and spinal cord deformities;

٩-Benign musculoskeletal lesions including common benign tumors of soft tissues and bone;

-

٩. Malign musculoskeletal lesions including common malign tumors of soft tissues and bone;

١١-Peripheral nervous lesions and pressure neuropathies by focusing on the carpal tunnel syndrome;

١٢-Neuromuscular diseases by focusing on cerebral palsy (CP), poliomyelitis, muscular dystrophies (elective);

١٣-Metabolic diseases by focusing on rictus, osteomalacia, osteoporosis, and gout (elective);

١٤-Bone and joint infections by focusing on septic arthritis, acute and chronic osteomyelitis, spinal cord tuberculosis and hand infections;

١٥-Upper limbs fracture and displacement;

١٦-Hip and lower limbs fracture and displacement;

١٧-Spinal cord fracture and displacement;

١٨-Amputation;

١٩-Side effects of fractures and dislocations by focusing on the compartment syndrome, thrombosis, and depth veins and fatty emboli;

It is necessary to review the anatomy and physiology of related section by focusing on the clinical application in duties of general practitioner.

During this rotation, the common diagnostic methods and tests shall have application in clinical activity of general practitioner, and request and interpretation of results of such tests and methods in common orthopedic diseases and disorders.

Necessary Procedures:

١-Ortolani and Barlow tests on infant's hip;

٢-Performing ATLS (advanced trauma life support) in multiple trauma disease;

٣-Performing temporary motionless of limbs with types of splinting;

٤-Producing and installing plaster splinters;

٥-Performing types of bandage in types of skeletal and joint damages;

٦-Installing dermal tension;

٧-Controlling the dangerous limbs bleeding;

٨-Taking care of lesion including washing and dressing;

٩-Transferring patient; Preferable

Procedures:

١٠-Discharging the hematoma under nail;

١١-Aspiration of knee joint liquid;

١٢-Setting the shoulder dislocation (close setting of shoulder joint);

١٣-Dermal traction of lower limbs fractures;

-

Specialized Physical Examinations of Orthopedics (Adults and Children):

-Examining the spinal cord (including SLR- Straight Leg Raising);

-Examinations of hip (including Ortolani and Barlow tests);

-Knee (ligaments, meniscus, liquid existence), knee liquids especially in terms of liquid existence;
-Foot and ankle examination techniques;

-Should examination techniques;

-Elbow examination techniques;

-Wrist, hand and fingers examination techniques;

-Studying the limbs in terms of bleeding (examining the peripheral impulses and capillary refill);
-Nervous examinations of limbs (nervous roots and peripheral nerves), describing the lesions of peripheral nerves;

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Orthopedic Diseases

Code: ٢٠١

Presentation: Clerkship

Prerequisite: -

Type of Course: Theoretical (٥١ hours)

Total Goals: According to the attached list,

A. Facing each common and important symptoms and complaints:

١-Describing the definition;

٢-Describing focused history taking and physical exam;

٣-Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases:

١-Explaining the definition, etiology and epidemiology of disease;

٢-Explaining the problems of patients suffering from the important common diseases;

٣-Describing the patient diagnosis methods;

٤-Explaining the most important preventive proceedings in different levels including the patient treatment and rehabilitation based on the scientific evidence and local guidelines to the extent expected from general practitioner;

-

٥-Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field;

Description: Meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;

Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.
Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.

Necessary Content: According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.
The amount and time of presenting the theoretical classes shall not fail the clinical learning of students. It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

A. Treatment of Common Symptoms and Complaints in Orthopedics:

١-Knee pain including osteoarthritis, lesions in meniscus and ligaments, and joint liquid;
٢-Hip pain including osteoarthritis, necrosis avascular;

٣-Foot and ankle pain including cartilage and ligament lesions, and flat feet;

٤-Shoulder pain including inflammatory lesions (boresight, tendinitis and prearthritis) and instability;
٥-Elbow pain including elbow of tennis players;

٦-Hand and wrist pain carpal tunnel syndrome, ganglion and Kienbock disease;

٧-Backache and neck ache;

٨-Child limping;

٩-Congenital limb deformity including congenital hip dysplasia, bandy-legged and noncongenital, including Genovarum and Genuvalogue;
١٠-Bone and soft tissue tumors;

١١-Joints inflammation;

١٢-Multiple trauma;

-

١٣-Fracture and dislocations of upper and lower limbs, hips, spinal cord; B. Common and Important Diseases in Orthopedics:

١٤-Common hip diseases;

١٥-Common knee diseases;

١٦-Common ankle diseases;

١٧-Common shoulder diseases;

١٨-Common elbow diseases;

١٩-Common wrist diseases;

٢٠-Common spinal cord diseases;

٢١-Benign musculoskeletal lesions including common benign tumors of soft tissues and bone;

٢٢-Malign musculoskeletal lesions including common malign tumors of soft tissues and bone;

٢٣-Peripheral nervous lesions and pressure neuropathies by focusing on the carpal tunnel syndrome;

٢٤-Neuromuscular diseases by focusing on cerebral palsy (CP), poliomyelitis, muscular dystrophies (elective);

٢٥-Metabolic diseases by focusing on rictus, osteomalacia, osteoporosis, and gout (elective);

٢٦-Bone and joint infections by focusing on septic arthritis, acute and chronic osteomyelitis, spinal cord tuberculosis and hand infections; ٢٧-Amputation;

٢٨-Side effects of fractures and dislocations by focusing on the compartment syndrome, thrombosis, and depth veins and fatty emboli;

C. Specialized Orthopedic Examinations:

٢٩-Examining the spinal cord (including SLR- Straight Leg Raising);

٣٠-Examinations of hip (including Ortolani and Barlow tests);

٣١-Knee (ligaments, meniscus, liquid existence), knee liquids especially in terms of liquid existence;

٣٢-Foot and ankle examination techniques;

٣٣-Should examination techniques;

٣٤-Elbow examination techniques;

٣٥-Wrist, hand and fingers examination techniques;

٣٦-Studying the limbs in terms of bleeding (examining the peripheral impulses and capillary refill);

٣٧-Nervous examinations of limbs (nervous roots and peripheral nerves), describing the lesions of peripheral nerves;

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Clinical Clerkship of Urology (Genitourinary Tract)

Urology Clerkship

Urology (Genitourinary Tract Diseases)

Orthopedics Clerkship

Code : ۲۰۲

Presentation: Clerkship

Prerequisite: Internal Diseases Clerkship, General Surgery Clerkship

Type of Course: Obligatory, ۲ Weeks, ۱،۵ Credits

Total Goals:

۱-Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;

۲-Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;

۳-Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the

-

scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);

٤-Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.
Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill
Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content: according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.
The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.
Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Urology

Code: ٢٠٣

Prerequisite: Urology Clinical Clerkship

Type of Course: Elective, ٢-٤ Weeks, ٢-٤ Credits

Total Goals:

١-Cooperating with personnel and other health team members in a good manner;

٢-Indicating specifications of good professional behavior in communications in a good manner, and indicating the commitment, skillfulness, and self-confidence necessary for performing the professional responsibilities especially under different clinical conditions;

-

٣-Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;

٤-Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);

٥-Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: In this course, students shall acquire necessary capabilities for performing independent services related to this section in general medicine according to the capabilities expected from general practitioners by cooperation in presenting health services in the related fields (hospital, clinic, health services centers, etc.), attending the specified educational sessions, and personal study;

Educational Activities: Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.
Necessary Content: according to the different conditions of education in different faculties and sections, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree.
The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices. Type and amount of duties and services assigned to interns in each clinical rotation shall be according to the educational goals of section, not disturbing the learning of necessary expected skills.
At least one third of interns training time shall be allocated to clinical education. Supervision may be applied for the higher levels (interns, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Common Symptoms and Complaints:

١-Pains of genitourinary system (pains in kidney, radicular, ureter, bladder, prostate, penis and scrotal);

٢-Stimulation symptoms (frequency, nacturia, dysuria, emergency sense);

٣-Obstructive signs (reducing urine pressure, urine drop, regular urination, and pressure;

٤-Sexual disorder in men (reducing the sexual distinguishing, sexual disability, non-ejaculation, lack of orgasm, premature ejaculation);

٥-Urinary retention;

٦-Urinary incontinence;

٧-Enuresis;

-

٨-Hematospermia;

٩-Pneumaturia;

١٠-Tract secretion;

١١-Fever;

Important Syndromes and Diseases:

Must Know:

١-Urinary stones;

٢-Common kidney and bladder tumors;

٣-Common anomalies of genitourinary system;

٤-Traumas of urinary system and its management;

٥-Neurogenic bladder;

٦-Benign prostate hyperplasia;

٧-Prostate cancer;

٨-Genitourinary diseases: stenosis, anomalies including hypospadias and epispadiasis;
٩-Acute testicle problems (infection, torsion, trauma);

Better to Know:

١-Testicle anomalies (Cryptorchidism, varicose);

٢-Testicle tumors;

During this rotation, the common diagnostic methods and tests shall have application in clinical activity of general practitioner, and request and interpretation of results of such tests and methods in common urologic diseases and disorders. During this rotation, common drugs to be used in clinical activity of general practitioner, and writing prescription in common urologic disorders and diseases are trained. During this course, it is necessary to learn and practice the safety considerations of patients.

Necessary Procedures:

١-Performing simple dresses;

٢-Performing the complicated dresses with simple debriman (partnership);

٣-Assembling and disassembling the bladder catheter;

٤-Suprapubic puncture;

٥-Performing the special urology examinations;

٦-Circumcision (preferably);

-

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Urology (Genitourinary Tract Diseases)

Code: ٢٠٤

Presentation: Clerkship

Prerequisite: -

Type of Course: Theoretical (١٧ hours)

Total Goals: According to the attached list,

A. Facing each common and important symptoms and complaints:

1- Describing the definition;
2- Describing focused history taking and physical exam;
3- Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases: 1- Explaining the definition, etiology and epidemiology of disease;
2- Explaining the problems of patients suffering from the important common diseases; 3- Describing the patient diagnosis methods;
4- Explaining the most important preventive proceedings in different levels including the patient treatment and rehabilitation based on the scientific evidence and local guidelines to the extent expected from general practitioner;
5- Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field; Description: meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;

Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.

Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.

Necessary Content: According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of

-

capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.
The amount and time of presenting the theoretical classes shall not fail the clinical learning of students. It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

A. Treatment of Common Symptoms and Complaints in Urology:

١-Pains of genitourinary system (pains in kidney, radicular, ureter, bladder, prostate, penis and scrotal);

٢-Urination disorders (stimulus and obstructive symptoms in urinary tract, retention, incontinence, and enuresis;

٣-Sexual disorder in men (reducing the sexual distinguishing, sexual disability, non-ejaculation, lack of orgasm, premature ejaculation);

B. Common and Important Diseases:

٤-Urinary stones;

٥-Common kidney and bladder tumors;

٦-Common anomalies of genitourinary system;

٧-Neurogenic bladder;

٨-Common prostate diseases: benign hyperplasia of prostate, prostate cancer;

٩-Urinary tract diseases: stenosis, anomalies (including hypospadias and hypospadias and epispadiasis;

١٠-Urinary system traumas and its management;

١١-Acute testicle problems (infection, torsion, trauma);

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

-

Anesthesiology Clerkship

Code: ۲۰۵

Presentation: Clerkship (presented in Clerkship I and II)

Prerequisite: Courses of Clinical Preliminaries

Type of Course: Obligatory, ۲ Weeks, ۱,۵ Credits

Total Goals:

1- Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2- Paying special attention to the specific problems of patients in environments of operation room, recovery and ICU and CCU, especially being skillful in controlling pain as expected by the general practitioner;
3- Performing the determined procedures (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: In this course, students shall meet the defined goals by presence in clinical rounds, operation and recovery rooms, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.
Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill
Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content: according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.
Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

-

Necessary Educational Content in Clinical Rotation of Anesthesiology:

Field of Knowledge:

١-An introduction to anesthesia including regional and general, and its branches including palliative medicine and pain;

٢-Air way anatomy;

٣-Keeping air way open;

٤-Pharmacology of sedatives and drugs;

٥-Controlling pain after operation (acute) and chronic pains;

٦-By principles of mechanical ventilation;

٧-Principles of CPR, BLS, ACLS and DNR (Do Not Resuscitate);

٨-Introduction to the initial concepts and outcomes of transform and massive transfusion;

Field of Practical Skill (Procedures):

١-Skill of using bag and mask ventilation;

٢-Selecting and using oral and nasal airway;

٣-Performing laryngoscopy in ١st and ٢nd classes' anesthetic patients;

٤-Performing tube placing of splinter via oral airway;

٥-Performing good venous cannulations from limbs;

٦-Active partnership in performing cardiopulmonary resuscitation;

٧-Using hemodynamic monitoring equipment;

٨-Introductory use of ventilator (preferably);

During this course, it is necessary to learn and practice the safety considerations of patients.

Secretariat of general medical education council may change the mentioned list in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Clinical Courses of Gynecology and Obstetrics

Gynecology and Obstetrics Clerkship

Theoretical Gynecology and Obstetrics

-

Gynecology and Obstetrics Clerkship

Code: ٢٠٦

Presentation: Clerkship I or II

Prerequisite: -

Type of Course: Obligatory, ٢ Months (٨ Weeks), ٦ Credits

Total Goals:

1- Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2- Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
3- Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);
4- Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.

Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content: according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

-

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Gynecology and Obstetrics

Code: ٢٠٨

Presentation: Clerkship

Prerequisite: -

Type of Course: Theoretical (٦٨ hours)

Total Goals: according to the attached list,

A. Facing each common and important symptoms and complaints:

١-Describing the definition;

٢-Describing focused history taking and physical exam;

٣-Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases:
١-Explaining the definition, etiology and epidemiology of disease;

٢-Explaining the problems of patients suffering from the important common diseases;
٣-Describing the patient diagnosis methods;

٤-Explaining the most important preventive proceedings in different levels including the patient treatment and rehabilitation based on the scientific evidence and local guidelines to the extent expected from general practitioner;
٥-Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field;

Description: meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;

Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.

-

Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.

Necessary Content : According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.

The amount and time of presenting the theoretical classes shall not fail the clinical learning of students. It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

A. Midwifery:

1- Preliminaries and definitions in midwifery and gynecology, collecting relationship and moral-religious considerations in midwifery and obstetric examinations;

2- Reviewing the functional anatomy and physiology of genital system; 3-

Placenta physiology;

4- Different symptoms and methods of pregnancy diagnosis; 5-

Pregnancy examinations and obtaining medical history; 6-

Pregnancy physiology;

7- Structure of hip and its abnormal types;

8- Pregnancy cares (including national programs of pre-birth care); 9-

Common complaints of pregnancy period;

10- Delivery physiology and developments, and delivery cares;

11- Post-delivery cares (including national program of post-birth cares);

12- Delivery in abnormal representations;

13- Childbirth stimulation;

14- Childbirth dystocia;

15- Embryonic distress and related cares;

16- Premature delivery, pregnancy after term;

17- Intrauterine growth delay;

18- Prolificacy;

19- The ٣rd three-month bleeding;

20- Types of placenta and placenta disorders and funiculus;

21- Post- birth side effects (infection, bleeding, thrombophlebitis, breast problems);

22- Blood groups incongruity;

23- Trophoblastic diseases;

-

24- Physiological childbirth, application of equipment in delivery (vacuum, forceps);
25- Cesarean and its types;
26- Hydroamnios and oligoamnios;
27- Hypertensive diseases in pregnancy;
28- Preterm rupture of membranes;
29- Cardiac diseases and urinary system in pregnancy;
30- Diabetics and pregnancy;
31- Abortion;
32- Extrauterine pregnancy;
33- Neonatal resuscitation; B. Gynecology:

١-Clinical and Para clinical examinations in gynecology;

٢-Maturity and menopause;

٣-Dysmenorrhea;

٤-Vulva and vaginal diseases;

٥-Vaginitis and cervicitis;

٦-Benign cervix and uterine diseases;

٧-Malign cervix diseases;

٨-Malign uterine body and tracts diseases;

٩-Benign ovary tumors;

١٠-Malign ovary tumors;

١١-Abnormal women bleeding;

١٢-Hip infections;

١٣-Amenorrhea;

١٤-Infertility;

١٥-Endometriosis;

١٦-Congenital disorders in genital system;

١٧-Pregnancy preventive methods;

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

-

Clinical Clerkship of Community and Family Medicine

Community and Family Medicine Clerkship

Code: ٢٠٩

Presentation: Clerkship (I or II)

Prerequisite: -

Type of Course: Obligatory, ١ Month (٤ Weeks), ٣ Credits

Total Goals: to meet the capabilities expected from graduates of general medicine,

- Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
- Performing the followings by knowing the structure, performance and relation of elements of health system and initial health care:

-

1- Analyzing, comparing with standards, and reporting the structure of different levels of health care system;
2- Performing the activities of presenting health services for pregnancy, children, mothers, old people, mid-ages, juveniles and young people in the first level of service presentation based on the national instructions under supervision of related trainers;
3- Performing the activities of health education for person, family and community in the first level of service presentation based on the national instructions under supervision of related trainers;
4-Performing the activities of environmental and occupational health in the first level of service presentation based on the national instructions under supervision of related trainers;
5- Performing the activities of oral and dental health in the first level of service presentation based on the national instructions under supervision of related trainers;
6- Performing the activities of school health in the first level of service presentation based on the national instructions under supervision of related trainers;
7- Performing the activities of immunization in the first level of service presentation based on the national instructions under supervision of related trainers;
8- Performing the activities of non-contagious diseases prevention and screening in the first level of service presentation based on the national instructions under supervision of related trainers;
9- Recognizing the electronic health information system and analyzing its results;
10- Using the methods of relationship with target community and social partnership in the first level of services presentation;

Description: in this course, students shall meet the defined goals by presence in health centers and health stations, and performing the personal and group assignments. Required theoretical training classes shall be held by the department of community medicine to provide theoretical knowledge in the form of explanatory workshops.

Educational Activities: learning activities of this section shall involve a harmonic combination of education in the field, personal study and group discussion, presenting the activity report, performing practical skills related to the mentioned goals under supervision of professor, and participating in educational sessions of group.

Schedule and composition of such activities and required fields for each activity including the health centers, and health stations in Clinical Study Guide are determined by each faculty and according to the standards notified by secretariat of general medical education council.

Necessary Content : according to the different conditions of education in different faculties, it is necessary that the learning guides are determined according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, the care taking, counselling and educational methods the student shall acquire sufficient knowledge on shall be specified in each clinical study guide. The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

-

Supervision may be applied for the higher levels (residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Community and Family Medicine

Code: ٢١٠

Prerequisite: Community and Family Medicine Clerkship

Type of Course: Obligatory, ١ Month (٤ Weeks) (explanatory workshops during the program maximum ٥ days, presence in urban sites ٧٠٪ and rural sites ٣٠٪ of the program based on the national population distribution), ٣ Credits

Total Goals: to meet the capabilities expected from graduates of general medicine, ١-Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
٢-Evaluating the danger factors management and reduction accurately for success for patients;
٣-Criticizing and executing the national health programs accurately in case;

٤-Analyzing and prioritizing the most important danger factors and health problems of population and district covered in the educational fields, compiling and presenting the appropriate solutions and necessary operating program according to the available facilities with regard to the cooperation inside and outside the ward; ٥-Criticizing the common and prior diseases prevention and screening services in the levels of person, family and society;
٦-Executing a plan in the form of analysis, prioritization and problem solving;

٧-Calculating and analyzing the health indices based on the work with health electronic system;
٨-Suggesting the health indices promotion solutions using the monitoring and evaluation solutions in the district;
٩-Obtaining the general, integrated and complete medical history in adults, children, pregnant women and elders in family medicine clinic or general health services centers;
١٠-Being able to generally and completely physically exam the adults, children (based on the common age classification), pregnant women and elders by observing the privacy of patients and knowing the related legal scope in family medicine clinic or general health services centers;
١١-Using the correct principles and approaches of referring to the higher levels;

١٢-Evaluating the effective social factors on health in person, family and society;

١٣-Using the methods of multidimensional protection (advocacy) in problem solving; ١٤-Using the premature diagnostic methods and common diseases screening in person, family and society;
١٥-Writing the necessary prescriptions based on the principles of reasonable prescription of drugs;

Description: in this course, students shall meet the defined goals by presence in health centers and health stations, and performing the personal and group assignments. Required theoretical training classes shall be held by the department of community and family medicine to provide theoretical knowledge in the form of explanatory workshops.

-

Suggested Educational Fields:

-General urban, rural and village health services centers;

-Health centers;

-Prevention clinic;

-Family medicine clinic;

-Health centers and municipalities district center (if possible);

-City health center;

-Visiting elders, orphans, prisoners, etc. maintenance centers (if possible);

-Accommodation in rural districts is advised if possible and in case of providing safety and security for students;

Educational Activities: learning activities of this section shall involve a harmonic combination of education in the field, personal study and group discussion, presenting the activity report, performing practical skills related to the mentioned goals under supervision of professor, and participating in educational sessions of group.

Schedule and composition of such activities and required fields for each activity including the health centers, and health stations in Clinical Study Guide are determined by each faculty and according to the standards notified by secretariat of general medical education council.
Necessary Content : according to the different conditions of education in different faculties, it is necessary that the learning guides are determined according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, the care taking, counseling and educational methods the student shall acquire sufficient knowledge on shall be specified in each clinical study guide. The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Supervision may be applied for the higher levels (residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Clinical Courses of Psychiatrics

Psychiatrics Clerkship

Theoretical Psychiatrics

-

Psychiatrics Clerkship

Code: ٢١١

Presentation: Clerkship (Preferably II)

Prerequisite: -

Type of Course: Obligatory, ١ Month (٤ Weeks), ٣ Credits

Total Goals:

1- Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2- Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
3- Diagnosing the problems of common and important diseases patients related to this section (attached list), justify and make suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.

Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content : according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.

-

It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Psychiatrics

Code: ٢١٣

Presentation: Clerkship

Prerequisite: -

Type of Course: Theoretical (٢٦ hours)

Total Goals: according to the attached list,

A. Facing each common and important symptoms and complaints:

1- Describing the definition;
2- Describing focused history taking and physical exam;
3- Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases: 1- Explaining the definition, etiology and epidemiology of disease;
2- Explaining the problems of patients suffering from the important common diseases; 3- Describing the patient diagnosis methods;

5- Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field;

Description: meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;

Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.
Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.

-

Necessary Content: According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.

The amount and time of presenting the theoretical classes shall not fail the clinical learning of students. It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

1- Anxiety disorders (dispersed anxiety disorder, fear disorder, panic disorders, post- accident stress disorder, anxiety disorder arisen from addiction, and from physical diseases);
2- Mood disorders (main depression, mood and bipolar depression, mourn, compatibility disorder, pre-menstruation, depression and psychosis disorder after delivery, addiction mood disorder, physical diseases mood disorder;
3- Psychotic disorders (schizophrenia, other psychotic disorders, delirium disorder, Brief Psychotic Disorder, psychotic disorders arisen from addiction and physical diseases, such as tumors and metabolic diseases;
4- Addiction (recognizing common drugs, addiction signs, addiction and giving up signs);
5- Sexual disorders (natural cycle, functional disorders);
6- Sleeping disorders;
7- Physical disorders in psychiatric diseases;
8- Psychiatric issues in physical diseases and psychomotor disorders;
9- Somatoform disorders (physical, transforming, body deforming and hypochondriasis); ۱۰- Mental disorders;
11- Cognitive disorders (dementia, delirium);
12- Elders psychiatric disorders;
13- Psychiatry emergency (murdering, killing, evaluating the danger factors);
14- Common psychiatric disorders in child and juvenile (hyperactivity, carelessness, sadism and conduct disorder, tic disorder, depression, anxiety, urinary and stool incontinence, mental retardation);
15-Medicinal and non-medicinal treatments in psychiatry;

Secretariat of general medical education council may change the list of this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

-

Clinical Courses of Emergency Medicine

Emergency Medicine Clerkship

Code: ٢١٤

Presentation: Clerkship (Better Presented in Clerkship II)

Prerequisite: Courses of Clinical Preliminaries

Type of Course: Obligatory, ٢ Weeks, ١,٥ Credits

Total Goals:

1- Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2- Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
3- Performing the necessary procedures (attached list) by observing the principles of patient safety under good supervision of higher ranks (according to the regulations of related section);

Description: in this training course, students shall attend the patient's bed with medical team (professors, residents and interns), and meet the specified goals by performing the personal and group assignments. The required theoretical training classes are held for providing the theoretical knowledge. Training sessions may include the participation in the morning report, practical training workshops of skills. Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.

-

Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill
Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content: according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Supervision may be applied for the higher levels (residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Common Symptoms and Complaints:

١-Cardiopulmonary failure;

٢-Multiple trauma;

٣-Chest pain;

٤-Stomach ache;

٥-Asthma;

٦-Weakness and phlegm;

٧-Reducing the consciousness;

٨-Common neurological signs: headache, vertigo and convulsion; Necessary Procedures:

1- Performing and practicing the patient's standard triage under normal conditions based on the protocol (including classification/ category and determining the patient's requirement);
2- Basic maneuvers of administering the airway and using the oral airway equipment;
3- Basic cardiopulmonary resuscitation (BLS) including cardiac massage, CPR, mask respiration, Heimlich maneuver and AED;
4- ECG and cardiopulmonary monitoring;
5- Straining;
6- Introduction to necessary equipment for bladder Catheterization and nasogastric tube;

-

7- Muscular, venous and subcutaneous injections;

8- Lesion care (washing, dressing, types of lesion and equipment required for treatment); 9- Primary trauma care;

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

-

Radiology Clerkship

Code: ٢١٦

Presentation: Clerkship

Prerequisite: -

Type of Course: Obligatory, ١ Month (٤ Weeks), ٣ Credits

Total Goals:

1- Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2- Acquiring sufficient knowledge on important radiological images of different limbs and body systems (attached list);
3- Optimally selecting and requesting for important radiological images in common cases based on the radiology indications in terms of diagnostic value, costs spent, radiation to patient and field of activity of general practitioner;
4- Using imaging and radiology as a scientific method for diagnosis and treatment of patient especially the prior and after consultations rather than as a professional skill means;
5- Imaging and recognizing the normal cases and natural variations in important common graphs (attached list) in order to avoid additional diagnostic- therapeutic actions;
6- Diagnosing immediately the important imaging findings in common emergency cases;
7- Adjusting the important items of imaging reports (specialists and radiology ward) with available findings in clichés;
8- Matching the available important findings in clichés and radiology report items with clinical findings of patient, and cooperating in the problem management steps of patient based on the ward standards under
supervision of higher ranks (according to the section regulations);
9-Recognizing the simple radiological procedures;

Description: in this course, students shall acquire sufficient knowledge on principles, techniques and applications of radiology, normal anatomy in imaging the chest, stomach, gastrointestinal system and urinary system, central nervous system, spinal chest and skeletal system, using the different imaging modalities for each section mentioned on common and emergency lesions, disorders and damages in radiology to adjust the important findings in clichés and items related in radiology report with the clinical findings of patient. The required theoretical training classes will be held to provide the theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of education on bed, providing the patient before imaging, cliché reading sessions and participating in educational sessions of group.

-

Schedule and composition of such activities and required fields for each activity including the health centers, and health stations in Clinical Study Guide are determined by each faculty and according to the standards notified by secretariat of general medical education council.

Necessary Content : according to the different conditions of education in different faculties, it is necessary that the learning guides are determined according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.
The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.

It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Important Radiological Imaging of Different Body Organs and Systems:

1- Imaging the gastrointestinal system- hollow viscus (including normal appearance of analysis with barium, normal CT Scan, introduction to CT Colonography, common lesions and approach to each disease);
2- Imaging bone, joints and soft tissues (common diseases and approach to each disease);
3- Imaging bone, joints and soft tissues (simple cliché, CT Scan, and MRI);
4- Imaging the common head and neck diseases and approach to each disease;
5- Imaging the urinary system (normal sonography, normal IVP, normal CT scan, common diseases and approach);
6- Breast imaging (including system, normal mammography, special Views, Birads system, and approach to each Birads, the role of sonography in MRI);
7- Imaging women and midwifery (including sonography, normal CT and MRI, normal histro-Salphenography, common lesions and approach to each disease, indications of request of transvaginal sonography);
8- Mediastina and cardiovascular imaging (including CXR, CT Scan, normal MRI, diseases and approach to each disease);
9- Children imaging;

During this rotation, the common diagnostic images with application in clinical activity of general practitioner, and request and interpretation of results of such tests and methods in common nervous diseases and disorders are trained.

During this course, it is necessary to learn and practice the safety considerations of patients.

Modalities and Important Types of Radiological Imaging:

Minimum learning items in each radiology modalities: -Simple radiography,
cases to be seen:
•Chest X-Ray: PA, lateral and decubitus;

•Abdominal X-Ray: erect and supine;

-

•Skull X-Ray: AP, lateral and occipitomental;

•Spine X-Ray: AP and lateral;

•Extremities: lower and upper limbs;

-Fluoroscopy: studies with contract agent, cases to be seen:

•Gastrointestinal system: Barium Swallow, Barium follow through, Barium enema; •Genitourinary system: intravenous venography, micturating cystourethrogram; -Sonography, cases to be seen:
•Liver and biliary tracts;

•Pancreas;

•Spleen;

•Kidney and bladder; •Uterus and ovaries; -CT Scan, cases to be seen:
•Chest: at least ۳ thorax CT Scans with indication and different protocols;

•Stomach and hip: at least ۳ abdominal and hip CT scans with indication and different protocols;
•Brain: at least ۳ brain CT Scans with different diagnoses;

•CT Angiography: limb, mesenteric, heart;

At the beginning of each main subject of rotation, it is necessary to review the anatomy of each section by focusing on the clinical application within scope of duties of general practitioner.
Writing the radiological request in common cases having application in clinical activity of general practitioner is trained.

Theoretical Syllabus:

1- Introduction to types of radiology methods and radiography techniques;
2-Radiobiology and radiation protection;
3- Introduction to types of contrast agents used in radiology;
4- Radiological semiology and indications of using types of radiological methods in skeletal diseases and trauma;
5- -Natural graph of chest (positions, simple image indication, CT Scan and other chest imaging methods);
6- Radiological semiology and introduction to chest diseases (mediastina, pleura, parenchymal diseases, infectious diseases, tumor pulmonary);
7- Simple abdominal radiology and indication of different imaging methods in gastrointestinal system analysis;
8- Introduction to gastrointestinal system diseases and acute stomach;
9- Introduction to genitourinary system diseases and indication of different imaging methods in system analysis;
10- Children imaging;

-

11- Introduction to preparatory actions for performing the imaging studies such as studies using edible and injective contrast agents, sonography, CT Scan, MRI and Nuclear Medicine;

12- Introduction to probable side effects of different imaging actions;

13- Introduction to types of contrast agent and common drugs used in imaging, indications, prohibitions and side effects of contrast agents;

14- Introduction to radiology advantages and limitations in diseases diagnosis and treatment;

15- Introduction to side effects of ionizing radiations on human including pregnancy and different methods against radiation;

Secretariat of general medical education council may change the list of subjects, and necessary procedures in this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Clinical Courses of Infectious Diseases

Infectious Diseases Clerkship

Theoretical Infectious Diseases

Infectious Diseases Clerkship

Code: ۲۱۷

Presentation: Clerkship II

Prerequisite: Courses of Clinical Preliminaries

-

Type of Course: Obligatory, ١ Month (٤ Weeks), ٣ Credits

Total Goals:

1- Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2- Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
3- Diagnosing the problems of common and important diseases patients related to this section (attached list), justifying and making suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);
4- Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.

Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content: according to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and Para clinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

-

Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Infectious Diseases

Code: ٢١٩

Presentation: Clerkship

Prerequisite: -

Type of Course: Theoretical (٣٤ hours)

Total Goals: according to the attached list,

A. Facing each common and important symptoms and complaints: ١- Describing the definition;

2- Describing focused history taking and physical exam;

3- Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases:

1- Explaining the definition, etiology and epidemiology of disease;

2- Explaining the problems of patients suffering from the important common diseases; 3- Describing the patient diagnosis methods;

4- Explaining the most important preventive proceedings in different levels including the patient treatment and rehabilitation based on the scientific evidence and local guidelines to the extent expected from general practitioner;

5- Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field;

Description: meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;

Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.

Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.

Necessary Content : According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of

-

capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.

The amount and time of presenting the theoretical classes shall not fail the clinical learning of students.

It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

١-Common symptoms and complaints in infectious diseases;

٢-Common Bacterial Diseases: streptococci infections (pharyngitis streptococci, rheumatism fever), staphylococci infections (abscess, pneumonias, folliculate and Golgi), meningitis, otitis, cynosite, tuberculosis, brucellosis, typhoid, shigellosis, cholera, cellulite, orchitis, urinary infections, pneumonia, sepsis and septic shock syndrome, acute food poisoning, sexual diseases;

٣-Common Viral Diseases: catching cold, flu, chicken pox, zona, herpes, HIV, hepatitis;

٤-Common Parasitic Diseases: malaria, sedative cyst, parasitic intestinal diseases, gull, pedicolosis;

٥-Controlling infections in health and medical centers and hospitals;

٦-Reasonable prescription of antibiotics;

This course shall be presented in a way to pay attention to the national protocols and epidemiology of infectious diseases in Iran and district.
Secretariat of general medical education council may change the list of this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Neurology

Code: ٢٢٢

Presentation: Clerkship

Prerequisite: -

Type of Course: Theoretical (٢٥ hours)

Total Goals: according to the attached list,

A. Facing each common and important symptoms and complaints:

١-Describing the definition;

٢-Describing focused history taking and physical exam;

-

٣-Discussing important differential diagnoses, and suggesting necessary steps for reaching the patient problem diagnosis and management; B. On common and important diseases:

1. Explaining the definition, etiology and epidemiology of disease;
2. Explaining the problems of patients suffering from the important common diseases;
3. Describing the patient diagnosis methods;
4- Explaining the most important preventive proceedings in different levels including the patient treatment and rehabilitation based on the scientific evidence and local guidelines to the extent expected from general practitioner;
5- Using the knowledge learnt for clinical reasoning and recommendation of diagnostic or medical approaches in facing the scenario or describing the patients related to such diseases;

C. Paying attention to the important issues to be necessarily observed in clinical environment of this field;

Description: meeting the specific goals through attending the class, clinical skill learning center (skill laboratory), training workshop and performing the personal and group assignments;
Educational Activities: learning activities of this course include the harmonic composition of theoretical education, personal study and group discussion, and performing other learning assignments.
Schedule and composition of such activities and required fields for each activity including the class, Skill Lab., clinical sites, are determined by each faculty of medicine in study guide according to the standards notified by secretariat of general medical education council.

Necessary Content : According to the different conditions of clinical education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners.

The amount and time of presenting the theoretical classes shall not fail the clinical learning of students.

It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Syllabus:

١-Treatment of neurological diseases;

٢-Stroke (medical and diagnostic method);

٣-Convulsion and epilepsy (principles of diagnosis, treatment and pursuit);

٤-Headache diseases (migraine, tension, cluster);

٥-Cognitive and dementia disorders;

٦-Myopathies and disorders of nerve and muscle connection point;

4. Neuropathy and kinetic neuron diseases;

-

5. Introduction to sleeping diseases (apnea, hypersomnia, insomnia, narcolepsies, parasomnia);
6. Infections of central nervous system (meningitis, encephalitis, abscess);
7. MS and other anti-myelin diseases of central nervous system;
8. Motor disorders (Parkinson, Chorea Athetosis, dystonia, myoclonus);
9. Introduction to paraclinical actions (laboratory, imaging, electrophysiology and Lumbar puncture) in nervous diseases (necessity of application, physiology, technique and interpretation);
10. Neurological side effects of internal diseases;
11. Treatment of less-consciousness patient (coma and brain death);

Secretariat of general medical education council may change the list of common symptoms and signs, important syndromes and diseases and necessary procedures of this section in necessary time intervals if required and according to the priorities at discretion and coordination of board of general medicine and faculties of medicine.

Clinical Courses of Dermatology

Dermatology Clerkship

Code: ٢٢٣

Presentation: Clerkship

Prerequisite: Clerkship

Type of Course: Obligatory, ١ Month (٤ Weeks), ٣ Credits

-

Total Goals:

1. Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2. Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
3. Diagnosing the problems of common and important diseases patients related to this section (attached list), justifying and making suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);
4. Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.

Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill
Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.
Necessary Content: the students of General Medicine are advised to mainly attend the clinics, general wards and emergency for ٦٠-٧٠٪ of clinical education.

According to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and paraclinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

-

Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Ophthalmology Clerkship

Code: ۲۲۵

Presentation: Clerkship (Clerkship II)

Prerequisite: Internal Diseases, Surgical Diseases and Pediatrics Clerkship Type of Course: Obligatory, ۲ Weeks, ۱،۵ Credits

Total Goals:

1. Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;
2. Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;
3. Diagnosing the problems of common and important diseases patients related to this section (attached list), justifying and making suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);
4. Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

-

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group.
Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content : According to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and paraclinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.
It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

-

ENT Diseases Clerkship

Code: ٢٢٧

Presentation: Clerkship (Clerkship II)

Prerequisite: Internal Diseases, General Surgery and Pediatrics Clerkship Type of Course: Obligatory, ١ Month (٤ Weeks), ٣ Credits

Total Goals:

١-Connecting with patients, personnel and other health team members in a good manner, and showing specifications of good professional behavior in a suitable communication;

٢-Obtaining medical history of patients suffering from common and important symptoms and complaints related to this section (attached list), performing necessary physical examinations, discussing important differential diagnoses, and suggesting the patient problem management and diagnosis;

٣-Diagnosing the problems of common and important diseases patients related to this section (attached list), justifying and making suggestion on the preventive, treatment, reference and rehabilitation actions, and also patient education in a level expected from the general practitioners based on the scientific evidence and local guidelines, and cooperate in patient problem management based on the standards of the section under supervision of upper ranks (according to the section regulations);

٤-Performing the essential procedures related to this section (attached list) by observing the patients safety principles under appropriate supervision of higher ranks (according to the section regulations);

Description: in this course, students shall meet the defined goals by presence in clinical rounds, training clinics and performing the personal and group assignments. Required theoretical training classes shall be held to provide theoretical knowledge.

Educational Activities: learning activities of this section shall involve a harmonic combination of training on patient's bed, personal study and group discussion, presenting the disease cases, performing practical procedures under supervision of professor, and participating in educational sessions of group. Schedule and composition of such activities and required fields for each activity including the hospital, clinic, health services centers, laboratory, emergency, Skill Lab. clinical skills learning center, are determined by each faculty of medicine in Clinical Study Guide according to the standards notified by secretariat of general medical education council.

Necessary Content : According to the different conditions of education in different faculties, it is necessary that the learning guides are determined by faculty of medicine according to the deed of capabilities expected from graduates of general doctorate degree and with regard to the standards notified by secretariat of general medical education council, Ministry of Health and Medical Education, and delivered to the learners. The mentioned skills, main diagnostic and paraclinical methods and necessary drugs the student shall acquire sufficient knowledge on shall be specified in each clinical study guide.

The classes shall be presented in a way that they focus and deny the student's presence beside the patient and his/her clinical practices.

-

It is necessary for the educational department to determine, notify and execute the educational methods and program and student evaluation based on the scientific principles. Faculty of medicine confirms the program, supervision on execution and evaluation of program.

Supervision may be applied for the higher levels (interns, residents, fellowships, professors) and other relevant members of health team in order to ensure the patients' rights and safety considerations meet the learning goals of students. Faculty of medicine is responsible for determining the method of good supervision on each procedure or intervention.

Medical Ethics

Code: ٢٢٩

Presentation: Clerkship (Preferably in First Months of Clerkship)

Prerequisite: -

Type of Course: Theoretical (٢ Credits, ٣٤ hours), Total (٢ Credits, ٣٤ hours)

Total Goals:

Knowledge Goals:

- Recognizing the human and ethical aspects of medicine;
- Being informed of total expectations of Islamic teachings and medical jurisprudence of a qualified physician;
- Being able to recognize the subjects of medical ethics in his profession;
- Obtaining the knowledge infrastructure to take moral decisions in medicine;

-

- Being informed of his obligations as a physician; Skill Goals:
- Connecting good relationship with patients based on the rules of medical ethics;
- Making the moral decision in his profession;
